Who needs them anyway? :) I know this would be a cool idea, because even with two nodes, that would mean that you can be on the internet, as well as dialup, not just one at a time... I have considered getting a multiplexer for running multiple nodes, but the price CSS is asking to do it is just not worth it...

>

One addition to this. Once the low level format and partitioning is complete, you still have to high level format (notmal disk format like you would a floppy) each partition, as each partition will look like a seperate disk to the computer. Each partition will have itsown drive ID. (Ex.: Partition 1 might be D3:(C: if you are using SpartaDOS X) partition 2 could be D4: (D: w/SDX not to be confused with the AtariDOS D: as D1:)...
If you have D3: set as the current default drive and you are running from BASIC and enter RUN"D:filename.ext, you'll probably get a file on D3: root directory, provided a file by that name exists ot a 170 error "file not found". So be sure to us the Dn: drive number to specify the drive specifically.

Have fun and good luck with the new hard drive!

: It is on the list, and it is and ER cart. I have the publisher listed as
: INHOME though. Is it really INHOUSE?

No, it is "INHOME". They were a local outfit (to Hamilton) based in
Missisauga Ontario. The guys who ran it lived in Burlington, and were
members of the Hamilton, Burlington, Oakville Atari Users Group (which
just folded)...

They did the "B Key" replacement keyboard for the 400......I have one, and
it is pretty good. they also did a Baseball....the first one for the Atari
computer......it LOOKED promising, but was a Basic program compiled. It
was not a good game, and although highly anticipated, was panned....tons
of them were made, as it was expected to do well.....by everyone...I
remember seeing the prototype at the HBOAUG one night it 1983.

The company was mismanaged, and lost a ton of cash after making a ton of
cash.....I think it was one of the first Atari software companies to bite
the big one...

Also, the photons don't 'sparkle' like they do in the original (I
loved that effect).

Actually the colors being out of whack are really just a minor
problem. The real problem is with the random generation of the
starfield. In earlier versions of xl-it, the starts would line up in

a diagonal line from bottom left to top right. This also caused a big problem with the asteroids, because they would line up with the stars and there was no way to avoid them they kept coming right at you (which made for very short games). He did some tweaking of the random generator bug in xl-it 2.0 and it is better but the stars and asteroids still are not being placed correctly.

If he can fix that bug and get the photons to sparkle, then I wouldn't care if the shields are in day-glo lime green.

>able to rip music from .xfd or .atr files...

Ah! I was wondering about something similar myself. I have PlaySID for my STE,
which plays C64 music, and I think it would be possible to emulate the POKEY
chip quite easily since it only has square waves. The thing is, a fair amount
of XL/XE music is converted from the C64 anyway, but it would be nice to
have a PlayXL/XE... so where are the music files? I have seen a whole website
dedicated to SID music but never heard of anything like it for the XL/XE :-(

I haven't been on c.s.a.8 for *ages* since my newsreader decided to unsubscribe
me from everything. I did wonder why I had so much more free time lately ;-)
Nice to see everything is alive and kicking as before!

>joysticks are the same thing.

What extra buttons? Any extra buttons are just hardwired to the same pin. In the case of Sega Master System/Megadrive controllers, they work too but the extra buttons really are extra buttons, in the sense they are wired differently and so don't do anything on an Atari.

Draconus? Cracked? Why did you have to do this? I have an original copy and was
able to make a fully working back up. As for these Polish games, I have heard of
them but have been out of touch with the 8-bit scene for a while since my
New Atari User subscription ran out (about the time I got an ST, and was buying
three magazines a month for it). Is NAU still around, and where might I get some
of these Polish games, recommendations etc. I mainly like arcade style action
games, especially platformers and shooters.

I have that cart as well. In my listing (which I have posted here at
various times) I have it listed there as well. I am not sure if it is
difficult to find of if the games by INHOME tened to be over looked.
They also put out a Basesball cart on the 8-bit.

-Marlin

My list of known 8-bit carts is on my web page.

4207. EGA monitors

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-08 00:00:00 UTC
From: bchermma@bluffton.edu
Message-ID: <863133786.3033@dejanews.com>
Source record: 73140

Is it possible to do some sort of hack that will allow an Atari 8-BIT
I.E. an XE, to use an EGA, Amiga RGB, or a Tandy RGB?
I have done such a thing with my Agima 600 which allowed me to use a VGA,
but then again the Amiga is quite a bit different when it comes to
monitors.
As for pinouts all I have right now is the one for the Tandy RGB, though
I am not sure this will do any good.

CM-8 Connector

1-Ground
2-Ground
3-RED
4-GREEN
5-BLUE
6-Polarity (no PIN)
7-Audio
8-SYNC (horizontal)
9-Sync (vertical)
10-NO connection

---

I need Software developers who can program highly advanced graphic programs.
The Software needs to run on Unix Workstations and Windows NT/95 environment.

It is not a one person project. You will be working with multiple people.
So you have to know(or learn fast) how to work in a team.
It doesn't matter were you live. 'Cause we can have contact through the Internet.

If you think you can do this, PLease ReMail this message and tell me something
about yourself and your work(not neccesary). And I will send you some more information.

Sincerely

Ruben Daniels

4210. Free: Make 3D scan from real object to virtual object

Newsgroup: comp.sys.atari.8bit

----

The CAD industry is a very delicate industry.
Everything has to be precies sometimes as precise as a 10th or 1/100 of a mm.
This is iin some case impossible to do with a computer cad program.

Companies that have these problems for instance people in the designing industry have to make everything perfect.
For them is it impossible and much to time costly to use a computer fo this purpose.

Well I have got the best thing for you.

It is an machine developed in Denmark.
There is still only one prototype of it.
It is a laser wich can scan any object and make it into a dxf format file.

Of course you can see that this machine has unlimited possiblities to use it.

We offer now, 'cause we still have to refine and test it, a free use of the machine.
The only thing you have to pay are the transportation of the object you want to scan to send to Denmark.

It has an accuracy of about 1/10 mm but if the machine is ajusted just right it cen be even more accurate.
In the future we expect it to be as accurate as 1/100 of a mm.

Of course the objects cannot be very large. If they are they must scanned in a couple of times.
Of course this is no problem.

It can save tens of thousands of dollars because else someone had to make it with the computer which is impossible to do with a precision of a 10th mm.

The speed of this machine is incredible of course you can control this but it can be done in 5 minutes. Of course the scan will be better if you let it take more time to scan.

Please remail this message for more information. Please tell me what kind of object you want to use it with etc. If you want to make use of the testing we will bring you in contact with the developer of the 3D laser.

When you remail lthis message please answer the following questions.

Thank you

- If this machine was brought to the market what would you be willing to pay for it?

$10.000 - $20.000
$20.000 - $30.000
$30.000 - $40.000
$40.000 - $50.000
Another value please type it yourself

- What would you use it for and what do you think it can be used for?

- Do you know people who could use this product? (Do you want us to contact them)

Sincerely

Ruben Daniels

> Atarian care ;-)

CC65 is too complex if you ask me. I would recommend ACE-C and the ACE-C
libraries. You can also find it somewhere in the UMich Atari archive.

It's a "sort-of-ansi-C" compiler for our 8-bit. It has some really good
functions integrated and uses the special capabilities of the 8-bit
hardware using some simple c functions (i.e. player/missile was never so
easy to program). It uses a really good compile/link package. A minus is
perhaps the size of the executables, created with ace-c and there isn't a
program enviroment, like in Kyan Pascal.

imho an easy program to "play" with 'C' with your atari. Funny, all
programs written in ANSI-C will work as well. (i.e. "UNRAR"? I never tried
it)

C is really nice, but GOOD programs must be written in ASM. Or is there a
"C" Compiler that uses the extended ram? (WOW, programs larger than 64k!!)

Thanks for all of your help, y'all!! And I admit to my mistake...I do
not know what on earth possessed me to write INHOUSE, but it was INHOME.
Oh, well! I will chalk it up to grad school distress!!

I found the rarity lists, and it helped a lot. Thanks again!!

Kathy

Everyone, 1) I really need to know if there is a way to
>write an Atari 8-bit disk image from a my PC to an Atari-formatted
>disk. (snipped)
Well, I am relatively new to this game, but I would venture to say that, depending on what kind of disk image, and also depending on what kind of 8-bit and other hardware and software you have, it should not be too difficult.
Starting with the best case scenario, if the disk image is one made with one of the popular programs that people use to link their pc's and their 8-bit machines, sio2pc and ape are two that come to mind, and if you have those programs and the accompanying hardware, it should be no problem to copy the disk image over.
If what you are referring to is a disk image made with one of the 8-bit disk imaging programs, then you need to first get the image to your 8-bit, whether by sio2pc or similar, or null-modem cable, or even two modems and two phone lines. This last is awkward I know, but it will work. After doing this, you need to get whatever disk imager was used in the first place and I confess that here my knowledge is limited. If you know what imaging program was used, and if you post that information, then perhaps one of the more experienced Atarians here can help you with that as well. Hope this is enough to get you started.
Tom

It would probably be quite useful to have a good memory manager in there...
one which recognized extra RAM and automatically switched banks as well as,
perhaps, virtual memory for those with HDs.

Hmm... I need to get this thing running again. Sounds like a project.

From: Richard.Douwes@hcc-lwd.idn.nl
Message-ID: <449_9705090503@idn.nl>
Source record: 73150

Hi,

Recently bought a flatbed scanner, and am now looking for a good home
to upload some of my precious old ATARI articles. Who wants them on
their homepage? I'm afraid I haven't got a homepage (yet).

Just finished the article from Compute! from April 1985 about the
introduction of the XE and ST computers at Winter CES. Cool article
about ao. the 65XEM (!) and the 65XEP (And then I'm talking about P
for Portable!, not the 80-col. thing) In the past I have sent small
parts of this article to this NG, but I'm really looking for somebody
with a few MBs to spare, so I can email all of those cool articles
there, and everybody can read them, wouldn't that be great?

So, who wants them? Ivo van Poorten still alive?

Please send a copy of your reply to my email. (Not sure about my
newsfeed)

>windows like OS on the 8bit.
>
>Alan

Actually, I believe Alan Reeve is still around - a couple years back I did a
search and found some info online about him. Diamond, by the time it hit
V3.0, was a fairly decent OS... which was when the Atari market hit the
dumps. There were no compelling applications for Diamond, which really
detracted from it. But when you think that one person wrote the whole
thing, it's a fairly impressive achievement - add in the three applications
he wrote, and it's a nice job (Diamond Paint, Write, and Publish).

(Heck, Windows didn't amount to anything until 3.0 either)

The trouble with keeping the menu in memory all the time was that it ate
about 6K of your already limited RAM... though it would have been nice
to have it as an option for those with 48K who were writing BASIC
progs...

At least BASIC had the XIO commands... I feel sorry for Commodore users
who had to type something like:

OPEN 15,8,15:PRINT#15,"I0:":CLOSE 15

to format a disk (though XIO255,#7,0,0,"D:" was almost as cryptic...)

note to nitpickers: PLEASE don't waste bandwidth correcting me if these
are the wrong commands, I don't really care...

I used to run a 256K 800XL (no idea what kind of upgrade, but it was
compatible with SpartaDOS 3.2's RAMDISK commands and anything that used
130XE upper RAM) off a modified C-64 power supply for a few years, and
never had any trouble... maybe you fried it using it to power your
XF551? Probably only had one transformer secondary winding in it, with a
tap to get the lower voltage (or no tap, just a regulator)... did it
smoke when it died? :)

4230. vt100 emulator on Atari800XE, need to build cable between atari & tv-set

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-09 00:00:00 UTC
From: pavel@atrey.karlin.mff.cuni.cz
Message-ID: <5kvdtl$1jk$1@ns.felk.cvut.cz>
Source record: 73161

Hello, world.

(Please CC: to me).

I have nice Atari 800XE at home, and would like to use it as vt100
terminal. 5 years ago I was quite experienced atari hacker, but I've
not seen atari for really long time.

I have some questions:

1. Does anyone have vt100 emulation program for atari? Please let me
know if so... (But I'll probably have to write it on my own, since I
would like it to support things like HW scrolling, ISO-Latin 2 font,
PC-like keyboard layout...)

2. Is there some compiler of 6502 assembly? I need either C source or
linux binary...

3. My 800XE misses cable between 800xe and tv-set. I tried to replace
it with plain cabel, but it does not quite work. Seems to me that
there's something in that black box which is on the cable. DOes
someone know WHATS inside that.

4. What is throughput of sio2pc cable?

5. Is there linux software available to create sio2pc 'server'?

6. I would like to connect PC to atari (I do not have even cassete
recorder for that computer!). What is the easiest way to do so? (Well,
I'm not willing to spent > $5 on it...)

Looking forward to your help.

Yep, you are right. But since this is running on my own server, I think
that I will be able to update it more frequently. Plus, I'm working on a
telnetable bbs which will also run on the site. I'd like to start a powwow
chat conference for atari 8bit people to use. I love it's voice-chat
capabilities. I intend to keep supporting the 8bit users for quite a
while, yet.

Tom, thanks for the reply. The images I am speaking of are in the .ATR
and .XFD formats. They are 90k images which should be able to fit on a
180k diskette, I am not too familiar with the sio2pc and ape imaging
systems, so I am not sure if this type of transfer is possible. I am
not sure if the images will convert back to their original state, but I
will make an attempt to make the switch. Thanks for your insight.

>note to nitpickers: PLEASE don't waste bandwidth correcting me if these
>are the wrong commands, I don't really care...

But they are! :) I0: initializes the disk, but to the 1541 that means
"check for a new disk in the drive", not "format". It's a pretty useful
command, and without it one could lose much data if one happens to have
two writable disks with the same disk ID. The 1541's OS is notoriously
buggy. I lost a demo I was writing due to the 1541's bugs in the
save-and-replace methods, which are pretty much the standard on the Atari
8-bit.

Actually, Commodore had an abundance of fastloader cartridges which had,
as a feature, a DOS wedge that could be accessed from BASIC. The command
you described above would become:

@I0:

Simple, yes? And a plain @ would give the status line. And by keeping
channel 15 open, one could send commands and receive stati easily from
BASIC.

This would all be great, if it weren't so bleeding difficult to read a
simple directory listing from BASIC. With the DOS wedge, it's a simple $
command, but in a BASIC program, it's pretty damn weird, especially if you
want to load it into an array of some kind. With Atari, it's just:
OPEN #1,6,0,"D:*.*" and just input strings until you hit the free sectors
line.

Fte now owns the USDoubler since it seems to own the
rest of the old ICD stuff. I'll ask Mike if we can distribute the code or
at least fix your EPROMs. Fte is pretty cool about this kind of stuff....

I think it is a 6810. BG Micro has it for $1.25 last time I checked.
http://www.bgmicro.com.

They also have a lot of other 65xx and 68xx chips, RAM, MAX232's
and other goodies pretty reasonable. They used to have only a $10
minumum order but I don't know if that is still the case.

Much of that list looks suspiciously like Video Game Liquidators.

4242. Atari 8bit items for sale

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-10 00:00:00 UTC
From: rsg0910@iglou.com
Message-ID: <E9y709.GHC@iglou.com>
Source record: 73076

If this was posted twice, sorry about that. Seems my provider didn't get the first one out or something.

Got a bunch of Atari 8bit items for sale here, as promised. A couple items have problems, and they're mentioned below. Prices are quite negotiable, buyer pays shipping of $7 for the computers and disk drives, and about $3-5 for the other items, which I believe is quite fair. I will ship via UPS within the United States, and all payment is via cash, money order, or cashier's check. Those with PO Boxes will be sent via the Post Office. I've seen some personal checks bounce when I dropped them. [hehe] Reply via email please, and not the newsgroup.

If I have some people who wish to have an auction, then I will turn the pricing for that item into an auction in email only. I do not wish to have them duke it out in the newsgroup. I will not post this listing daily, rather, weekly, in respect to the users of the group.

All items will come with the power supply. The computers and drives will also be supplied with the serial cable. If you do not want the supply and/or serial cable, let me know, and it will not be included.

If anyone wishes to do a trade of various items, let me know. I'm always on the lookout for some ST items or other items of interest.

410 Tape drives - have 3 - $7 each, or all for $15

800 computers - have two - one has a bad power board that needs replacement, though the rest of the computer works fine, with 48K. The second has what looks like 32K, with the memory expansion boards, without the little enclosures. The 48K one for $15, 32K one for $10, both for $20.

400 computer - 16K, with what sounds like a loose speaker inside. $7

1050 disk drives - have 2 - I believe these are just the regular stock models, no upgrades. One for $25, both for $45.

800XL computers - have 4 - One for $20, all four for $65.

1200XL computer - this thing is getting harder to find. $25.

810 disk drive - A classic item, even harder to find. I'm not even sure if I should part with this or not. $30.

130XE computers - have 2 - one has a bad keyboard connection, not sure if it's the keyboard, or the motherboard connector, though it still works, and I have a wire to make a connection by taking the cover off and touching it to one of the connectors. The other's keyboard is quite yellow, but could easily be cleaned up. $30 for the working, $20 for the one with the flaky

keyboard connection.

CX85 keypad - this has no software that I can find. $5.

1030 300 baud modem - $5

Indus GT disk drive for parts - doesn't even begin to work, no power supply. I tried repairing it some time ago, and smoked it. [sigh] $10 would be fair, I believe.

Koala Touchpad with cart - another item hard to find, I believe. $15

If you want *EVERYTHING*, then it's nearly $300 for all this. I believe a price of $240-250 would be fair, plus the shipping would be pretty high. If you're close by the northern Kentucky/southern Indiana area, we could get together somewhere instead of shipping.

In article <862969098.10250@dejanews.com> dated Tue, 06 May 1997 20:41:18 -0600, bchermma@bluffton.edu (bchermma@bluffton.edu) says...

> 9. How to you convert the power of a Euro Atari to use US power?

Unless it is an old 400 or 800 or a 1200XL, simply plug in a US power supply. All of the XE series, and the XL series other than the 1200XL, input 5 volts DC into the power jack on the back of the computer.

If fact, given the simple rectifier design of the original 800, 400, and 1200XL, you could likely use a US power supply with the European version of those, as well. No doubt the 10Hz difference in AC frequency would make no difference to their simple rectifiers.

Viewing the PAL output (at least with color) would be another matter, as not only is the video rate different (but some monitors and even some TVs can cope with that), but the color subcarrier frequency is different (meaning any US [NTSC] monitor that could handle the scan frequency would display the picture as only black and white.

bchermma@bluffton.edu (bchermma@bluffton.edu) says...
>
> Is it possible to do some sort of hack that will allow an Atari 8-BIT
>I.E. an XE, to use an EGA, Amiga RGB, or a Tandy RGB?

There was an article in an old issue of "Atari Classics" that detailed how to attach a RGBI (CGA) monitor to an Atari 8-bit, by tapping the digital output of the chip that determines the 8 luminance levels available. This would provide only 8 colors, and in most every case would not be even close to the colors you would get with the composite output (i.e., both a medium bright red and a medium bright blue might appear as a bright green).

Since the CM-8 expects a lower voltage analog input, it might be advisable to add some resistors inline to knock down the voltage a bit, to be on the safe side.

If you are interested, I can find that issue of AC, and relay the info on which chip, and which pins on it are involved.

BTW, there is a way to be able to set which 8 colors you get, but it would involve finding a video palette DAC (a cheap 16 register version would do fine), and mapping it into the Atari's address space. No docs exist for this, and I suspect no one has done it, but it is possible.

HI,

Can anyone provide me witht he link (or FTP site) for what was
Yogi's Jellystone Park, an Atari 8bit archive? I've been unable
to find it. Search engines have produced nothing but pages that
would seem to indicate that this source has now "dried up". Is
this true? Any other "mirrors" or other sources of 8 bit software?

Bill

4248. Atari Recorder questions

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-10 00:00:00 UTC
From: buck@grolen.com
Message-ID: <33746e61.0@news.grolen.com>
Source record: 73082

I have a lot of files on tape that I am trying to copy over to disk
but my 410 program recorder has lost all of it's enthusiasm. If I
remember correctly, it never was very reliable anyway. Has anybody
who has used the Atari 1010 or XC-12 found these to be any better?
I recently acquired a Commodore 64 with it's version of a program recorder
and it is almost bulletproof! Certainly makes the 410 look pretty lame.

Any information on the reliability of the 1010 or the XC-12 would be appreciated,
particularly concerning which is best.

Bill

Hi all,

Today I got a beautiful mint-condition Atari 800 XL, with which I am very happy. However, there is one problem: it doesn't produce sound through the TV speaker.

This is not as bad as it seems: I can still get sound through the monitor plug to my stereo, which sounds a lot better anyway. This of course confirms that the sound hardware of the atari is working properly; furthermore, if I de-adjust the TV set (quite a lot) I can sometimes make out the Atari sound (very badly, though). This seems to indicate that there _is_ a connection from POKEY to the TV-SIGNAL converter.

The Atari is an UK PAL 800 XL, and I myself am living in the Netherlands (using PAL, of course). The connection instructions for PAL TV systems say that UK Ataris are on channel 36 while other European ataris are set up for channel 4. This seems to be correct since I had to adjust the channel when I hooked up the UK Atari.

Can anybody explain how it is possible that I get a good image without getting proper sound (just noise) on channel 36?

Could anybody point out how I could adjust the Atari to channel 4 television output? Is it hard-wired in the computer? I have the weird feeling this would solve the problem...

Regards, Sidney

Speaking of the Indus GT, does it have the same controller, a WD2797, as
the Rana drives?

I agree that all programs should be written in assembler too ;-) I've wrote some demos some years ago. I started a crew called Pokey Soft, but it was really only me in it! I will gladly assist in assembler programming if anyone's interested in starting coding! Take Atarian care everyone!

The archive has moved. I don't have the URL handy, though.

End of line.

If it's PD, have you checked any of the archives yet? Maybe someone
has already made a .dcm of it somewhere, perchance?

> For $3.99, I think I'll order a copy!

I'd be interested in hearing about this. If it's specifically for the XE,
I guess it needs 128K or more?

Anyway, I'm also curious as to whether it would be any better than
dialing up with FlickerTerm or Ice-T and running Lynx in a shell
session...

If nothing can be made very graphic for the Atari, it seems like it
would be hard to improve on a direct dial-in to a shell account
running pine, tin, lynx, ftp and irc...

...though I would be interested to see if any such animal is a
significant improvement. What I see is this: Typically, the 8-bit
needs to be rebooted with each new app that runs (well, if it's not
a binary load from a DOS prompt, anyway). Would a disconnect and
reboot be required in order to (say) go from a Web browser to checking
e-mail? And from checking e-mail to reading Usenet?

If so, a shell session (if you can get one) seems to be clearly
superior (unless someone builds a GUI for the Atari with a very
low memory footprint...)

> After all, it is called cyberspace...

Due to human error entering some DNS records for NACS.NET, it has
become unreachable, unless you specify the IP address.

The problem has been corrected, and when the DNS servers catch up with
the change it will go away. Should happen within 24-48 hrs.

For now, if anyone needs to e-mail me please send try:

mailto:classics@207.166.192.30

..and if you need something from the Ape Homepage you
can access it at http://207.166.192.30/~classics

Thanks

> If so, is it in orbit? Do they have Internet there?
> After all, it is called cyberspace...

Due to human error entering some DNS records, the entry for
some NACS machines got fuddled up. It has been fixed and when the
DNS servers all get new copies will will be fixed, hopefully
within 48 hours.

For now, I have turned off mail forwarding at ai123@freenet.carleton.ca,
so you can reach me there, instead of classics@nacs.net. If you sent
mail to the freenet address and it bounced, send it again, it will not
bounce this time.

Thanks

Steve

I would get a modem connected to your 800xl and download them, but there
are other ways of connecting the 8 bit to the pc that I know little about.

You can run a whole NETwork of Atari 8bits on just 1 IBM power pack,
What you need to do id cut off the cord to your Atari power brick you
will notice
that one of the lines has a WHITE marker, this is the power line 5volts.
the other is ground. Now on the clone power pack you'll have lots of
lines, the RED lines are 5volts, and BLACK is the ground. Use a
Multi-tester to be safe.

Im running a comeplete LAN 8bit network on 3 IBM power packs :)
Good luck.

Star..

Star NET BBS 407-281-6132 24hrs 500 megs since 1989.

> rscolaro@sprynet.com

OK, ATR: This is the SIO2PC format. You can use SIO2PC or APE, and mount the image,
then run a disk copier. You can also run an emulator and use Disk Communicator to create
a DCM, then export that to a file on the PC.

XFD: This a PC Xformer image. You can strip off the first 16 bytes to make an ATR. There
are utilities to do this for you. You can also use the emulator method.

DCM: Copy this to an Atari disk with one of the ATARIO-based disk utilities (MyUtil, etc)
and run Disk Communicator. Alternatively, import it to an ATR or XFD disk image, run Disk
Comm. on an emulator and extract it onto another disk image, then use SIO2PC or APE. I think
APE can convert these to ATRs without big gyrations, but I don't use APE and don't recall how.

Digital Research was beating MS up until Windows 3.0... I always
wondered why
DRI didn't upgrade GEM to compete.

Yes, same in 4.0... If you place it in an HTML block, it supports the
full <A> syntax
and all those other bandwidth-wasting
unreadable-on-any-other-mail-reader HTML effects...
Very good mail and newsreaders on NC4, in any event.

Actually, it was 254 in all versions of DOS AFAIK... DOS 3 also had a
smart
format (253) which allowed you to specify format size... Convenient for
RAMdisk
utilities, etc.

mig alley ace
spitfire ace I believe, and one more
All three were killer two person games.

4275. Another NTSC test vs. PAL

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-11 00:00:00 UTC
From: rhart37663@aol.com
Message-ID: <19970511110401.HAA17584@ladder02.news.aol.com>
Source record: 73106

Ok, so I probably baffled a few people with my last test.

I am looking for assistance from ATARI 8bitters in the U.S.
Could someone do these tests so that I have an ideas as to the EXACT limits of ANTIC, both here in the U.K and over the water in the States.

ANTIC - Limits. (a detailed explanation for yuz.)

All I need to know is exactly how many Scan Lines can ANTIC generate?
On the UK (PAL equipped ATARI's) it is possible to go as high as 238 scan lines, that's 22 scan lines above standard OS modes.
I need the information to calculate 'worst case' DMA (cycle stealing), that way anything less is considered as bonus cycles per frame.

The display has been put.. ON ITS HEAD!! The BLANK 24! Scan-Lines (usually BLACK and above any text area). Are now, AT THE BOTTOM...
AS mode 8 lines.
(1 x mode 8 =1 scan line in height)

ALL Atari display-modes are 192 scan-lines (Vertical) +24 Blank, which is 216 in TOTAL. Wide Playfields require 48 bytes per line so all text get skewed.
I have only fixed the display where I required the text to stay still.

USE the CURSOR KEYS? up/down to INCREASE THE COUNTER......
BEYOND the usual 216!!

There is (hopefully..) , DISPLAYED ON SCREEN, the NUMBER of Scan-Lines.

READ the following VERY CAREFULLY.. otherwise I shall end up with mixed reports on what you get.

If you LOOK at the BOTTOM of the display, where the last blue scan line touches the black background, PRESS the CURSOR UP key
If you Press it fast you will see it EXPANDS by 'ONE' scan-line for every press of the key. { sorry but the flicker is just part of the display updating }
That's one MODE 8 LINE for every press of cursor UP.

Try it with the CURSOR DOWN, and the DISPLAY SHRINKS back up.
DO IT a few times to see what I mean.

THE ACTUAL TEST... (start NORMALLY - SCAN LINES =216)
press the UP key, gradually. UNTIL the display has a BRIGHT (PINK?) BAND at the very bottom { it will probably JUMP or ROLL too}, THAT'S ANTIC... OFF LIMITS!!)

SLOWLY..Press CURSOR DOWN until the display turns to NORMAL AGAIN.

At this point, you SHOULD BE ABLE, with only ONE press of CURSOR UP to flip the display OVER THE LIMIT, and just ONE press with DOWN to bring it back again.

Just TELL ME HOW MANY scan-lines you can achieve WITHOUT the BRIGHT BAND appearing.

I don't really care about the appearance, it's the NUMBER of Lines that I am looking for.

Please give the model of Atari used for the test.

Again, USA machines ONLY

Here's the listing.. [Please do not try with any Emulators]

***** ANTIC LIMITS (HOW MANY SCAN LINES CAN YOU GET ?) ******

```

Atari XL/XE computers are still being made today?
If so, are they used in other electronic devices? and, would they
still be the same size, or miniaturized? <

I doubt if the custom chips designed by ATARI were continued after 1985/6
but there's enough old stock 'OUT THERE' to keep the Atari 8bits
going until we expire ourselves.
The 6502 and the PIA chips should STILL be in production, albeit in
miniscule quantities. As to their being miniature products of 6502 or
whatever, I personally haven't come across any in the past 10 years!!

It was a feat of genius to even create the portfolio, a cruddy little pc!!
with a limited display of 40x8 in Black and Shite.
I mean let's be realistic here, you can get 240Mhz portables with full
colour and CD and Hard Drives for about $2000. WHO? in their right minds
would consider any portable based on 1978/9 technology, Even if it was
several years ahead of it's time. Also consider the investment required to
develop it, let alone sell enough to see any kind of reward for it. The
Atari Lynx is about as close as you get to a portable colour games machine
that actually had decent games for it <sadly lacking>.

Atari's past record with retail outlets and chains made sure that anything
they released would not recieve support from developers and public alike.
They 'announced' to soon then proceeded to deliver very late, by that time
competitors such as nintendo and sony et al had newer
more powerful hardware for sale...

7800... RIP
XE GAMES SYSTEM... RIP
LYNX... RIP

there's a surface mount version of the 6502 and its about dime-sized. as
for the other non-custom parts they're still being made in a variety of

shapes and sizes :-) the gtia/pokey etc are no longer in production.

This message is dedicated to al those who owned Atari Systems during their Golden Years. Even though it only had 64K and incredibly slow software it was still incredible!!!!! Does anybody remember the title Return of Hercules!!!!!!!!!! That game was an incredible adventure. Did anybody ever play Karateka, this was long before Mortal Kombat and similar titles. It really pioneered the game world that we experience today, sure the graphics and the speed improved but few of todays games are even comparable. If you are a current Atari owner please E-mail or a former one. I actually developed some commercial titles, which you might own!!!

Truly Yours,

Anthony C. Russo

There are a couple of types of PAL. The PAL used by Germany has exactly
this effect i.e. a perfect picture but no sound. If you have a
multistandard TV it will be able to handle this. COuld it be you also have
the version of PAL used in Germany?

The sound sub-carriers are on different frequencies I believe but beyond
that I don't know.

You turned a simple question about xl/xe parts availability to a rant about the portfolio and lynx. Me thinks you have ADD (attention deficit disorder).

You seem to think that people are trying to find portfolios to replace notebooks. Hello. You have any concept of the timeline we're talking about here? The portfolio is a collector's item. No one (that I know of) would buy it to *use*. Get a hint.

Nintendo and Sony delivered more powerful hardware before atari could? You sound like you're new to the game market. Jag hit the shelves about 2 years before Sony put out a game system. And longer before Nintendo put out theirs.

You don't sound very knowledgeable about the stuff you're ranting about.

Whatis the XC-12? I have never heard of that device? A 3rd party tape
drive for the 8bit?

Speaking of tape drives for the 8bit does anyone know of a Tape backup
(like the 250 MB colorado tape backup I have on my 486) that works on the
8bit? Maybe another hack for bob Puff's black box? I know you can use PC
floppy drives now..

Yeah, considering it was a one-man effort, Diamond is quite impressive.
Too bad Atari Inc didn't employ him, to make a new (D)OS. That Dos XE was
a nice idea, (ultraspeed skew for Xf551 drive, built in, Atari's first
real DD dos, date/time stamp, etc) The only killer was an incompatible
disk format. Dos XE was too little, too late and was weak compared to
Sparta Dos 3.x/4.x.

4285. Infusion BBS Software

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-11 00:00:00 UTC
From: Grant Passmore <skaboy@usa.net>
Message-ID: <33765d08.0@data.wt.net>
Source record: 73116

I just thought I'd let everyone know....

There is finally a BBS Software with all of the great features of OBV/2 and Iniquity, but without the bugs and bad
support. Infusion BBS Software is a new generation in BBS Software, modeled after OBV/2 and Iniquity with everything
that the sysop can imagine..and more.

Some basic features are:

o Multi-node upto 255 concurrent users
o Light-bar support [arrow keys]
o Requires NO Fossil Driver [selectable FOSSIL, ASYNC, and Digiboard for each node]
o Online Configuration [menu editor, string editor, evemt editor, node editor, system editor, etc]
o Pipe Color Codes
o MCI Codes
o Powerful scripting language
o Internal One-Liners, Blacklist, voting booth, etc
o Internal Z-Modem, X-Modem, Y-Modem, Y-modem-g [no limit to external protocols]
o Internal COMM Program with internal protocols, Auto Up/DL
o Great support
o Basically all of the great features of OBV/2 and Iniquity combined

Infusion has been picked up by fuEl [international art group], and Infusion 1.0th will be released June 10th.

Come to the Infusion Home-Page at http://web.wt.net/~sparky/ibbs/ and jump into the JAVA Based Chatroom,
or come to the ANNEX, the official Infusion IRC Server [irc.annex.net] #infusion / #bbs

I mean IF there are extra buttons. If they don't just duplicate the
single trigger then they will probably be wired to the
lines the Atari uses for the potentiometers. Whether or not this can
work would depend on your own programming. It's not likely that some
existing game would expect to see inputs there.

DDT is Dunion's Debugging Tool. You can trace programs and it's very
useful! Excellent tool :-)

Anthony,

Yeah, I remember, <sniff> <sniff>. I just subscribed to this
group, but I just wanted to say I learned to be a serious programmer on
the Ataris, and owned and supported one for 7 years. It's too bad
there's not an emulator floating around for the PCs... Or is there?

...Rodney

PS: I don't miss 6502 assembly though!

In an article dated Sun, 11 May 1997 00:48:46 -0500, someone named Greg
Miller says...
>> (Heck, Windows didn't amount to anything until 3.0 either)
>
>Digital Research was beating MS up until Windows 3.0... I always
>wondered why
>DRI didn't upgrade GEM to compete.

DRI got nailed in look and feel lawsuits by Apple (who ripped of Xerox).
Later GEM versions had max 2 fized size windows. SO, the product tanked.

4294. Need directions for SIO2PC cable assembly... Please Help... :)

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-12 00:00:00 UTC
From: "David B. Dancy" <dbdancy@thevision.net>
Message-ID: <3377E2AD.3A79@thevision.net>
Source record: 73030

I just found all of this Atari stuff on the web lately. Glad to see others haven't forgot about it. My parents almost threw out my 2 800XL with the works after I moved out. I would have been extremely pissed off...

But to the point...

I found a Radio Shack Parts list on a web page within the last day or so. But, there were no schematic diagrams of this cable (SIO2PC). I was hoping someone out there could help. I think I've already got the correct software to do the interfacing, but not the direct connection to my 1050 drives. Please email me back... Thanks.

4295. atari 8bit trade list

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-12 00:00:00 UTC
From: ebrunne@orion.it.luc.edu

Here's my tradelist of atari 8bit computer carts. I'd be interested in trading them for any cart not on my have list, which follows.

Ted B

Atari 8bit computer carts for trade (loose):

Alphabet Zoo (spinnaker)
Astro-Grover (cbs)
Basic
Congo Bongo (sega)
Donkey Kong
Flight Simulator II (XE)
Fraction Fever (spinnaker)
Frogger
Miner 2049er (picture label)
Missle Command
Pac Man
Pitfall
Pole Position
Popeye (PB)
Q*bert (PB)
Space Invaders
Star Raiders
Star Trek SOS (sega)
SW:ROTJ, DSB (PB)

here's the carts i already have (none of these is for trade/sale, so please dont ask):

atari 8bit carts/tapes

81 different titles...

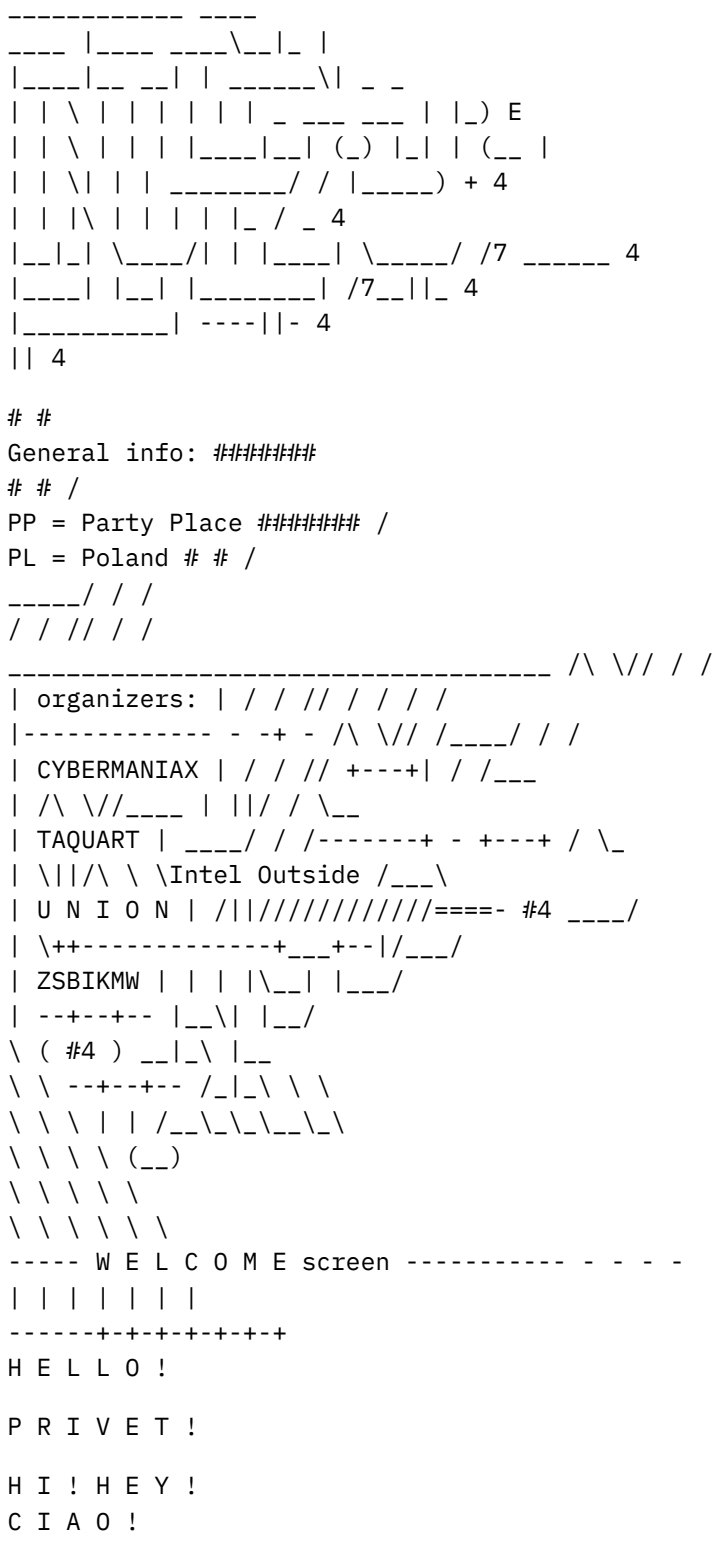
Atari:

Asteroids
Atariwriter
Ballblazer (XE original)
Basketball
Blue Max (XE)
Bug Hunt (XE)
Centipede (1 black, 1 silver)
Computer Chess
Defender (personal)
Dig Dug (1 black, 1 silver)

Donkey Kong (1 black, 1 silver)
Donkey Kong Jr. (silver)
E.T. Phone Home
Flight simulator II (XE)
Food fight (XE)
Joust (silver)
Jungle Hunt (silver)
Missle Command
Ms Pac Man
Pac Man
Pole Position (silver)
Qix
Robotron 2084
Space Invaders
Star Raiders (x2 one of em is my personal copy)
Track and Field (silver label)

3rd party:

Alien Garden (epyx)
Alphabet Zoo (spinnaker)
Alphabuild (fisherprice)
Astrochase (PB)
Astro-Grover (cbs software)
Big Bird's Special Delivery (cbs software)
Coconotes (cbs software)
Congo Bongo (sega)
Dance Fantasy (fisher price)
Deluxe Invaders (roklan)
Educational System Master Cartridge D 4001 (Dorsett Educational Systems)
Facemaker (spinnaker)
Fraction fever (spinnaker)
Frogger (PB)
Journey to the Planets (roklan)
Jumbo Jet Pilot (thorn/EMI)
Jumpman Jr. (Epyx)
Kaboom (activision)
Kickback (thorn/EMI)
Kids on Keys (spinnaker)
Kindercomp (spinnaker)
K-razy Antics (cbs software)
K-razy Shootout (cbs software)
Math Mileage (CBS software)
Major League Hockey (thorn EMI)
Megamania
Miner 2049er (x2 1 picture, 1 silver. big five software)
Monkey Wrench II, the (eastern house)
Night Strike (TG products)
Pitfall (activision)
Pitfall II (activision)
Popeye (PB, label gone)



Q*bert (PB)
River Raid (activision)
River Rescue (boxed, w/docs) (thorn EMI)
Shamus (synapse)
Star Trek SOS (sega)
Submarine Commander (thorn EMI)
SW: ROTJ Death Star Battle (PB)
SW: TAG (PB)
Time Bound (cbs software)
Turmoil (sirius/fox)
Wizard of Wor (roklan)
Zaxxon (sega)
Zenji (activision)

Prototypes:

Assembler/Editor (protolabel, wrapped)
Assembler/Editor (reg, wrapped)
Atari Artist (protolabel, wrapped)
Atari Logo (protolabel, wrapped)
Basic (reg, wrapped)
Centipede (protolabel)
Educational System Master Cart (regular, wrapped)
Music Composer (protolabel, wrapped)
Star Raiders (protolabel)
Star Raiders (regular label, wrapped)
Super Breakout (protolabel)
Super Salt (x2 protolabel, labelless, 2 different versions)
Telelink II (protolabel, wrapped)
Tennis (protolabel)

No no, people get up with the program! It's now at:

http://myst.slcc.edu/~atari/

but sadly, looks like no more Ftp space.

Cmwagner is mirroring the (was) the hackerz site, so his should still
be available thru ftp.

I have that! I really liked Action!, but I'd say it is somewhere between
BASIC and Pascal.

I never got the runtime though... My executables require the cart to be
installed or they won't run. Anyone know where I can find the runtime
disk?

4301. Re: what became of GOE?

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-13 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970513054100.BAA27801@ladder02.news.aol.com>
Source record: 73032

Hi David,

I did some work with Alan on Diamond GOS (I did the icon graphics and was mentioned in the V1.0 manual). Alan approached Atari with the idea of selling GOS with the XE computers since it had a look & feel of TOS in an 8-bit sense but Atari wouldn't go for it, then a marketing company he hired tried to strong arm Atari into buying it and selling it. That was the end of that. Alan pulled out, did some revisions here and there then it was time to move on :(

>
I remember reading about the save & replace bug in old issues of
Compute!... it was 'SAVE"0:@filename", right? Otherwise you would get a
"file already exists" type error.. the silliest thing I remember about
the Commodore disk system is that somebody actually wrote a program to
play music using the grinding noises the 1541 made (don't know if this a
true or not, but it sure is a good story! :)

> Actually, Commodore had an abundance of fastloader cartridges which had,

Yup, I remember this too... "stati", huh? I like your useage of the
plural form...

> line.
>
Yah, I also saw in that same issue of Compute! a program to read a
directory off the disk (1541 or older 4040-type systems) and it went
through all kinds of gyrations.. I guess you would merge it with an
existing program & call it as a subroutine (merging itself was a pretty
complex thing on Commodore... I like the Atari ENTER"D:MERGE" method)

You know anything about the "1541-II" drive that was released along with
the 64C and 128 series? Will it work with copy-protection schemes?
(Please reply in E-mail, as this is off-topic, and don't forget to

Message-ID: <50334585@river.prima.ruhr.de>
Source record: 73037

Hi Folks,

I am searching for exact details of the Atari 8bit physical
Diskformats (850 Single Density and 1050 enhanced Density) because I
want the programmer of the CatWeasel-Controller to implement support
for Atari 8-bit Disks. The CatWeasel ist programmable and already
supports C-64, MAC, Atari ST and all kinds of IBM formats, so it
should be possible to support the Atari 8bit Formats as well.

Those of you who don't know the CatWeasel, see :

www.rat.de/apd/catweasl.htm

The details I have to know are for example

- Bitrate
- How many Bits are on one physical tracks
- Format of the sectorheader and checksum
- Format of the sector and checksum
- How do you compute the checksums
- Where are the checksum bits

Does anybody know where to get these and possibly other details on the
net (or otherwise) ?

I have the book 'Inside Atari DOS' which describes the Filesystem
Format, but without access to the data this is useless.

Greetings from "Irgendwo in Deutschland", Carsten

...Everywhere you look live ain't got no soul

Source record: 73039

Hi!

I would like to make atari talk to Hobit, which is linux pc running on 386DX40. (Well, it will be). I've built sio2pc cable and I'm now looking for software.

I found 2: ape, and sio2pc.

ape is overfeatured crippleware.
sio2pc looks nicer, but there's no contact to its author and no sources. Does anyone know e-mail of Nick Kennedy?

Are there any other packages able to talk over sio2pc? I want to port it under linux, and if it should be done right, I need sources. I do not want to reinvent the wheel...

FMI (For My Informations) how many other linux / atari users are out there? May I hope in some help?

4313. SALE!! ATARI/AMIGA

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-13 00:00:00 UTC
From: bchermma@bluffton.edu
Message-ID: <863577348.31887@dejanews.com>
Source record: 73044

NOTE: I will not be able to acess this acount in 10 days from now till the beginning of July, If you need to get in touch then call me at: 419 358 0913

Here is a recent list of my Atari/Amiga library. I have most of these titles in mu possesion, though there are a few (mostly Jaguary $ Lynx) that I d have to special order. I have checked all hardware from last posting so all that I have listed here is still in working condition, so if it isn t on the list anymore then it was sold or weathered.

XL/XE Hardware:

Atari Light gun
1050 Drives
1050 drives with Happy upgrade and expanded density (only two)
Atari Numeric Keypad
810 Modem/printer interfaces (only two) (810 might not be the right number on these, but you get the idea).
Power Packs for 1050s, XL/XEs, 2600s, ect.
Atari 800XLs, 130Xe, 65XE (no keyboard), 800 (with BASIC)
Joysticks
Drawing mouse
and the like...

Atari XL/XE soft.: Make offer or trade (I need midi support for my Atari, or XF551, hint,hint)!

Pac Man
River Raid
K-Razy shoot out
Dig Dug (old version)
Dug Dug (updated vesion)
Qix
Star Raiders
Galaxian
Space Invaders
Donkey Kong
Super Breakout
Missile Command
Ms. Pac Man
Hardball
Centipede
Joust
E.T.
Frogger
Bug Hunt (light gun)

Super Cobra
Robotron 2024
Popeye
Basketball
Pitfall
UTIL/KIDS/
Kindercomp
Memory manor
Logic levels
Master type
Koala paint
Atari writer
Atari Basic

5200: (make offer or trade (once again I need MIDI or XF551 (grin)!
PacMan (no box)
Berserk (no box)
Qbert
centipede
galaxian
super breakout
star raiders
space invaders
defender
counter measure (not sure if I'll part with it).

Amiga: I wish to sell as a whole for around $400.00, though if the prices
are right I can sell in parts (this does not mean memory).

A600
2 X 880k Disk Drives
Commodore RGB stereo montior
Mouse
Joysticks galour
120MB IDE External hard drive with case
Tons of software I.E. Sound Studio, Personal Paint, Mokey Island 1 & 2,
Lords OF Conquest, ect (tons!!!)
3MB RAM
Call for more info.

```
Big Atari 8-bit Package Auction:

This auction will last until bids have dried up, and will be sold to the
highest bidder.

Rules:

1. Bid only if you intend on buying
2. Buyer is responsible for all shipping costs
3. If you bid in a previous auction and failed to follow through, don't
bother
participating.
4. I reserve the right to do whatever.
5. Buyouts and trades encouraged and considered. See want list below.

Here we go:
----------

Atari XE Game System, complete in box, joystick, gun, Bug Hunt cart,
Flight Simulator cart,
all manuals, excellent condition

Atari XF551 disc drive, all cables and hook ups
Atari 1050 disc drive, all cables and hook ups
XC12 program recorder, complete in box
XM301 modem, complete in box

Carts Complete in Box
---------------------

Astro Chase Frogger Return of the Jedi
Desert Falcon E.T. Final Legacy
Donkey Kong Donkey Kong Jr. Jungle Hunt
Crossbow Ball Blazer Rescue on Fractalus
Star Raiders 2 Summer Games Track & Field (w/controller)
Barnyard Blaster

Carts (loose)
-------------
Berzerk
Super Cobra
Crossbow
Choplifter (Broderbund)
Blue Max
Decathalon
Millipede
```

Congo Bongo
Pengo

Discs Complete in Box

Goonies
Dallas Quest
Bruce Lee
Kennedy Approach
Wargames
Beach Head 1 & 2
Raid over Moscow
LA Swat
Panther
Controller

Cassettes Complete in Box

Conversational Italian
Speed Reading

Extras:

European 7800 hand controller (like Nintendo controllers)
Epyx Joystick

MINIMUM BID FOR ENTIRE PACKAGE $50

e-mail bids to address in header....

thanks for reading

Want List:

Sega Saturn (Japanese white version)
Atari Coin ops (why not ask...)
anything else very cool.....

Well, actually, Karateka's gameplay is horrible next to the modern
fighters, but yeah, there were a lot of good games on the old machines.
What titles were you involved with?

You are acting like it came out yesterday. It was the best palmtop of
its time,
and the major improvement of the HP95Lx (which came along a bit later)
was in
screen size. Guess what: people are buying palmtops.

> Atari's past record with retail outlets and chains made sure that anything

Not true. The Jag was released years before the Nintendo and Sony
machines. Their
track record with developers did hurt a lot, tho.

On the subject of the Ataris: Anyone seen Mace or the Area 51 sequel in
arcades yet?
Are they out?

4320. Ape 1.15 Release Now Available

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-14 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <5ld908$6d4@freenet-news.carleton.ca>
Source record: 72973

Both the registered and trial shareware version of APE 1.15 are now ready.

The new trial version is available at http://www.nacs.net/~classics.

Registered Users just send me e-mail for the new version. If you have
sent a request or e-mail in the last 5-6 days then I still have
it sitting around, so no need to send again.

A complete changes file, and new versions of the Users Manual for
APE and the ProSystem are available at http://www.nacs.net/~classics

I hope you all enjoy the new features, or at least find them useful. This
upgrade is free for all currently registered users.

Steve

5/13/97 1.15. Added or improved since 1.11b/1.12b

* When a DOS shell is launched (Key !),
APE will now try and swap itself out to EMS or disk.
* Free's up about 300k of memory for shell usage.
* New Config Opt: Default swap method.
+ EMS
+ DISK
+ NEVER
* Various Screen Update Bugs Fixed
* Fixed READ-ONLY File Problem w/ PC-MIRROR
* New Printer Options
+ Print to file now supported
+ Print to any printer port supported
+ Turn off printer (allows real Atari printer to talk)
+ Print to file supports APPEND or OVERWRITE
+ (Next version will support multiple emulated printers e.g.
P2,etc)
* New Config Opt: Disable Happy/Syncromesh Detect
* Patch available for Spartados X 4.20 for Ape Warp+ (request)
* Added HARD Write protect, acts like a real drive (error returned).
* New Config Opt: Hard/Soft Write Protect (Soft allows old method)

* APELOADER Software Created
* APELOADER Added via direct boot from PC-MIRROR drive.
* (see Ape User's Manual for all the features!)

* APELOADER updated to run even broken EXE files
* APELOADER menu updated, allow base address switch from Atari
keyboard
* New Config Opt: Default APELOADER base address

* Full support for .CAS digital cassette images added (key Y)
* (see Ape User's Manual for all the features!)
* New PC modem configuration interface
* New configuration manager interface
* APE now works 100% will all monochrome cards.
* Lockup bug fixed.
* Indus GT Syncromesh is now supported

Connecting your joystick really should be done via the printer port, and
the programming involved in reading it would be trivial. However, im guessing
that you want to play PC games with it so you can:

1) build a circuit w/ some resistors to simulate a PC joystick that just
floats in the middle till you pull on side off.

2) buy a gravis gamepad, which you can get for about $3 in the
closeout Mortal Kombat pack at places like EB. ($12 or so w/o the game)

I like athe gravis gamepad so much I have a little program that
lets me use it on the PC, w/ a cable attached to the 800xl joystick
port to translate it.

Ok ok ok..

I'm planning on setting up an 8-bit BBS.. Yes, you heard right, someone who really wants to put up an 8-bit BBS..

I used to use an MIO on my 8-bit BBS back in '89, but have been told since then that the MIO does not support RTS/CTS but the black box does.

However, the black box doesn't have the built in ram disk that the MIO does, which is something I would like to keep.

Is it true that the MIO doesn't support RTS/CTS? Any workarounds?

Please send the responses privately since my usenet host is expiring the messages too quickly.

Thanks,

Ken

4330. Terry Ortman: Liar, Theif and Loser

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-14 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970515020800.WAA01866@ladder02.news.aol.com>
Source record: 72983

Well,

Here's another Terry Ortman story. I sent Terry an email telling him that since he has such a bad reputation on the Internet that I would buy 2 of his items on the following conditions: That he sends it COD and that I would have my friend who is a UPS driver wait several minutes while I examined the contents of the package and made sure I wasn't receiving a brick in the mail. So here is Terry's ever so intelligent response:

Date: 97-05-14 14:01:37 EDT
From: terry.ortman@mustang.com (Terry Ortman)
Reply-to: terry.ortman@mustang.com
To: CVENDEL@AOL.COM

STICK IT, you can shove it up where the sun don't shine...

I do NOT ahve a BAD REOPUTATION, LIARS like you are posting your CRAP!!!

The ATR8000 was sold for the asking price...

So I suggest YOU BEG SOMEONE ELSE for one if you want one so bad...

Oh, I'll sell the Co-Power 88 one for the $350.00 I paid for it, and have never been able to use it...

So as you can see, suddenly he has sold his ATR8000 which he hasn't been able to sell for 3 years, so lets see if he actually updates his bogus for sale postings for his overpriced (and probably non-existent) equipment

When Trammel bought Atari Corp. (computers and home game systems),
Time-Warner kept the arcade division and related software as Atari
Games. Recently Atari Games were folded into Time-Warner Interactive,
after which, I believe, it was sold off to Bally or Williams Corp. I
don't know if Williams or Bally has kept the Atari Games name.

Atari Corp, in its last year or so, started Atari Interactive to port
Jaguar games to the PC and other platforms, but I believe they were only
able to release _Tempest 2000_. The company behind _Descent_,
Interplay, has evidently picked up the distribution of _Tempest 2000_
and any other games Atari Interactive developed before Atari Corp.'s
"merger" into JTS Corp.

4332. Re: Another NTSC test vs. PAL

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-14 00:00:00 UTC
From: rhart37663@aol.com
Message-ID: <19970514042701.AAA15256@ladder02.news.aol.com>
Source record: 73051

The results, Just in!!! there's a 238 scan line limit on BOTH
the NTSC and PAL chips.

It therefore appears that GTIA does the biz with TV Signal generation.

A request to NTSC owners only.
Anyone who knows the crystal Y2 frequency the XL's, and also the accurate
frequency of the (>14Mhz+) for the XE's. I would like to know WHY? ps.
it's at the front LH Side (65xe)

INFO about PAL Ataris.
This is the 14Mhz+ frequency for PAL Systems : 14.187576 Mhz
If you divide by 8 it is 1.773447 (the phase 0 clock for 6502)
The one for colour burst is STILL a separate crystal, I have no idea
why.
Perhaps a divided clock signal isn't stable enough.

-

Cant be done. They were created so I could put the mega image and the
emulator on one 1.44 MB floppy and take it to work and play it when it
was slow.
You can extract them with ADIR and copy them that way to an actual
floppy, if you have a pc and sio2pc cable I recommend getting APE (and
registering it) and using the pc as a fileserver for the atari (seems
a bit weird, but I have a cheap pc dedicated just for that)

Nope, it uses 128k of my 256k. You have to modify the "initial pokes"
somewhere. Better use the Ramdisk-Drive of BEWE-DOS, which is fully
compatible to SD 3.2 and you can use a config-file to configurate it (if
I remeber correctly).

> 2. Why doesn't anyone write software for Atari's with lots of RAM I.E.
> 576k?
Of course, there is. Some games (brundles, AR(?)) use the extension
memory, some demos too.
There is an exellent German Assembler/Editor out (130 XE Ass), uses
extended memory up to 256 k.

The problems are/were f.e.:
Not all computers on the market had RAM extensions, so that most
professional software did not use it in order to run with all computers.
There are such a high number of diffent ramdisks with different sizes
out - so how to use it ?

> 5. How does one go about placing an Atari 130 or 800XL into a tower with
> the Black BOX, and potential PC drives, and Hard Drives?
There are enough poeple playing around with this (I'm on the way, too)

> 10 Was Pole Position2, or Counter Measure ever ported to the Atari XL/XE?
Pole Positons - yes, I had it by myself - but it was very slow.

Hope, this helps.

Matt

Hello Vidar!

The utility disc for the msc harddisc ionterface contains a program called
IMG2DISC, which allows you to convert ATR and XFD files to an atari floppy
disc on your Atari (useing SpartaDOS or BeweDOS). Take a look at the
msc hompge:
http://www.kawo2.rwth-aachen.de/~matz/atari/index.html

(I think, you can download the utility disc for this homepage)

Carsten,
Your best bet is to get the manual for Atari DOS XE AND a copy of SpartaDOS construction set. These manuals have just what you need. For detailed info (Atari DOS 2.x source) get a copy of the Atari reference manuals for the 400/800. I has loads of valuable info. However, this may be hard to find, where the former should be much easier to locate. BTW, get yourself a sector editor (they're available from the Umich archive gopher://gopher.archuve.umich.edu:7055/11/atari/8bit) and have a look-see at how the structure is really all about!

Vidar,
If you have PC Xformer 3.60 and an Atari floppy drive, buy/make the XF Cable. The info for making your own is available at www.emulators.com. This way you can simply copy the files you want directly from the disk image to an Atari formatted floppy on you PC.
I agree with Yogi, that SIO2PC/APE would be another choice, albeit not as fast, but probably just as easy.
Another way, but more complex, is to use a program such ar EMU14 to extract files from the ATR image to a PC directory then, using term programs on bothe the PC and 8-bit and a null modem cable, transfer the files to the 8-bit. This is tedious, but work OK. Boot info can't be moved this way though unless the image is a normal floppy size for the 8-bit and is DCM'd. Even ARC can't do that.

Maciej,
SDX works pretty much like MS-DOS with only minor differences. The biggest difference is
that the COM files (commands) are really command files! SDX has many command in a virtual
drive called CAR:. You don't really need to know that, but most of the stuff you need is
built in. Copy, Delete, Move, DIR, Protect, ARC are all in there. Command structure is just
like MS-DOS.
Ex. To copy files from D1: to D2: work exactly like MS-DOS --- COPY D1:*.* D2:*.*.
Subdirectories are similar, but use the > simble instead of \. CD, CHDIR or CWD must have a
space following the command --- CD >BASIC. Like MS-DOS you can use CD .. to move up one
directory level. MD, MAKEDIR work like CD. ARC is a menu driven program and is not really a
COMmand program like the previous commands. It's more of an EXEcutable program rather than
a command, but it too is built in to SDX. Hope this helps. The SDX manual is rather large,
too big to scan and file transfer. It should be available from B&C ComputerVisions. Vheck
out their web page at www.myatari.com.

RHart,
Keep in mind that the HSync/color burst is a much higher frequency. for NTSC is 3.159MHz (x3 for RGB or aprox 10MHz) and VSync is just shy of 60Hz (59.9...HZ). That is why there are 2 crystals.

4346. UK: Old Computer Games Cartridges For Sale

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-14 00:00:00 UTC
From: Stuart Brown <stuart@sebmail.demon.co.uk>
Message-ID: <YDms6FA9SbezEw22@sebmail.demon.co.uk>
Source record: 73065
Cross-posted to: uk.adverts.computer,demon.adverts,midlands.adverts,alt.games.video.classic,comp.sys.atari.8bit

I have the following games for sale...buyer pays postage or collects,
prefer to sell as a complete lot.

E-mail offers.

Located South leicestershire, UK

Games Cartridges

Atari 2600

Air Sea Battle cx-2602
Combat cx-2601 (*2)
Galaxian 2684
Night Driver cx-2633
Outlaw cx-2605 (*2)
Pacman cx-2646
Pole Position
Space Invaders cx-2632 (*2)
Tennis 2680
Video Olympics cx-2621
Yars Revenge cx-2655

Cosmic Ark (Imagic) 720101-2 RevA.
Dragster (Activision) EAG-001-04B
Kung-Fu Master (Activision) EAX-039-041
Ram It (Telesys) 1004
Wing War (Imagic) EIZ-002-041

Philips G7000 VideoPacs

1, 4, 6, 10, 12, 14, 18, 22

Spare Power Supply

* Nintendo

Batman (Sunsoft)
Kung Fu
Super Mario Bros/Duck Hunt
Super Mario Bros. 3
Top Gun (Konami)

All items sold in good faith and believed in working order. I don't
have the facilities to test as I no longer have the hardware...however,
all have been stored in favourable conditions and were working
previously.

Private sale. Sold as seen.

4356. Commodore Data Cassette Tape Drives and a 1526 printer

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-15 00:00:00 UTC
From: ronwizbot@juno.com
Message-ID: <863564569.19487@dejanews.com>
Source record: 72987
Cross-posted to: comp.sys.atari.8bit,comp.sys.cbm

I am interested in modifying a Commodore Cassette Tape Drive for use with my Atari 130XE. I remember someone had posted that they had done it, but I lost the message. If whomever would send me the pinout of this tape drive and tell me how they did it, I will give them one for free (I have 2) but they would have to pay the USPS Parcel Post shipping.

If I cannot find a way to modify a Tape drive then they are for sale:

Commodore 1530 cassette tape drive $5.00 + S/H (USPS Parcel Post)
Fortronics cassette tape drive (1530 clone) $5.00 + S/H (USPS Parcel Post)

I also have:

Commodore 1526 Dot Matrix printer with power supply (no interface cable) for $3.00 + S/H (USPS Parcel Post)

Say,
did anyone go to "Atari Camp"? It was a week (or two week) long summer camp where you learned all sorts of stuff about the Atari 8-bit machines. They had one here in San Diego, CA at USD I believe they were held between 1981-83. I used to have a white binder I got from there with a green Atari computer logo on it. I believe I was 12 or 13 at the time...

Anyway, did anyone else go? Share!

Eric

The newest version of Xformer seems to run it fine, but with most sounds
missing.

4359. 1400XL or 1400XLD???

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-15 00:00:00 UTC
From: "Eric R. Balch" <erbalch@adnc.com>
Message-ID: <01bc6162$07a0cfc0$24eafbce@quasar>
Source record: 72990

Hello all:

I was looking through an old box of Atari promo lit and came accross the XL series catalog. I suddenly had a flashback to drooling over the pictures and descriptions of the Atari 1400XL and 1400XLD - As far as I know these models never got into general release but several years back I met a gentalman who owned a 1400XLD (but I digress).

Anyway, does anyone else remember these machines? Does anyone know someone who HAS one?

For those who don't remember, these models were basically 1200XL or Deeper form factor machines. They were suppost to be the Top of the Line XL machines but never realy made it to general release. They had built in modems, speach synthisis, and the 1400XLD had one built in 1050 drive with a knockout for another... These were indeed the "Mother of all Ataris".

You know what? I think I am drooling all over again.

Post your thoughts.

Eric R. Balch

Actually that one's true. Never had a C64 (no XL-er would ;), but heard
it on a friend's machine. I'm not sure if the drive didn't have a
speaker, though. I have no idea why it should, but the sounds were
pretty good, hard to believe they were just a side-effect.

Old memories...

Source record: 72993

Hi!

: >ape is overfeatured crippleware.
: >sio2pc looks nicer, but there's no contact to its author and no
: >sources. Does anyone know e-mail of Nick Kennedy?
:
: he doesn't have email, I'm sure someone could dig out the snail-address?

I have his snail-mail address, but it would take pretty long...

: >Are there any other packages able to talk over sio2pc? I want to port
: >it under linux, and if it should be done right, I need sources. I do
: >not want to reinvent the wheel...

: I have the sources (old) laying around somewhere on a 5 1/4 (IBM) diskette.

Please, please, please, send me a copy! I'm sure you'll find 5 1/4
floppy driver somewhere... [I have one in my home machine, if it helps
;-)]

: I no longer have such a disk-drive though. :(
: Problem with sio2pc and linux:
: 1. sio2pc is written totally in assembly and might prove hard to
port.

It would require complete rewrte but I would have something to start with...

: 2. because of strict timing constrains over the sio-bus, I really think
: an interrupt handler must be written for linux aswell, which means
: deviding the sio2pc-program in two halves. Which also means writing a linux
: device-driver (YES!)

I'm not sure. I looked at specs and it seems to me like atari uses
nearly standart RS232 protocol. Anyways, I'm able to write driver
under linux (alredy wrote driver for my cdrom ;-).

: It might prove easier to code a completely new sio2pc lookalike in C
: in two parts, device-driver and user process.

Yes, but its much easier to rewrite assembler program in C than to
write completely new program.

: my two |re.
:
: >FMI (For My Informations) how many other linux / atari users are out
: >there? May I hope in some help?
:
: Me, although I shelved my atari/black-box right now.

Thanx for your reply,

Pavel

-gets duplicated. I don't know much about the Duplicator.
-
-
The happy was first one that could make copies. The archiver was next,
the 1050 duplicator was a ripoff of the archiver. The super archiver
is the newest one I believe.
Personally, I like removing the protection totally - much safer.

Eric,

These machines were "too little to late" to save the Atari line, and
they were very expensive to manufacture. The built in voice was a
joke, although the 300 baud modem was kind of nice at the time.

I have a 1400XL sitting in my garage that got many a year of use in
the mid 80's (No, it's not for sale).

Revised List - found a couple more to throw in - sorry!

Games Cartridges

Atari 2600

Air Sea Battle cx-2602
Combat cx-2601 (*2)
Galaxian 2684
Night Driver cx-2633
Outlaw cx-2605 (*2)
Pacman cx-2646
Pole Position
Space Invaders cx-2632 (*2)
Sky Diver cx-2629
Tennis 2680
Video Olympics cx-2621
Yars Revenge cx-2655

Cosmic Ark (Imagic) 720101-2 RevA.
Dragster (Activision) EAG-001-04B
Kung-Fu Master (Activision) EAX-039-041
Ram It (Telesys) 1004
Wing War (Imagic) EIZ-002-041

2 Games Paddles (controllers)

Philips G7000 VideoPacs

1, 4, 6, 10, 12, 14, 18, 22

Spare Power Supply

* Nintendo

Batman (Sunsoft)
Kung Fu
Super Mario Bros/Duck Hunt
Super Mario Bros. 3
Top Gun (Konami)

All items sold in good faith and believed in working order. I don't
have
the facilities to test as I no longer have the hardware...however, all
have
been stored in favourable conditions and were working previously.

```
The Swedish Atari Club (SAK) 970104
and NoCrew proudly present...

-------------------------------------------
T H E N O R D I C A T A R I S H O W '97
-------------------------------------------

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together
which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we are arrange the show for the
third straight year we hope to fulfill everyone's expectations and that
this will result in the best possible atmosphere. We've gotten a certain
amount of criticism, both positive and negative, from those who have
attended the shows in '95 and '96. We've taken heed of the suggestions
made and we're once again off and running!

- WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday,
June 15. This is the weekend following the beginning of the summer school
holidays as well as the weekend prior to the Swedish Midsummer
celebrations. We'll open at 1 p.m. on the Friday and close at 6 p.m. on
the Sunday.

The show will take place in Gothenburg, just has it has in previous
years. The exact venue has not yet been established. We're still looking
for the cheapest location. The likeliest possibility is Kortedala
gymnasium, where it was held last year or some other venue, nearby.

- WHAT ACTIVITIES WILL BE HELD?

* There will be an Exhibition Hall will dealers, distributors, ShareWare
programmers and a host of other interesting personalities. The usual
meeting place for all those not wanting to "hack". This is also where
the Swedish Atari Club will be found supplying information, sale of
PD-disks, the club magazine's TT, the BBS, etc. We'll also have an area
reserved for a swap meet where you can buy, swap or sell single copies
of Atari related material and a "soldering corner" for those of you
wishing simple repairs done.

* A "Hacker Hall" where demo and other programmers can gather for
competitions and swap demos and all kinds of code. NoCrew is the
Swedish demo group who will see to it that everybody takes part and
enjoys themselves. Those of you hungry after rewards in the form of
```

prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

* Seminars with a number of well-informed lecturers. Last years seminars were very much appreciated, something of which we naturally have taken notice. The seminars will cover a variety of subjects (i.e. MIDI ercording/editing, DTP, hardware, programming) where the above mentioned "well-informed lecturers" will demonstrate his subject directly on a computer in order to provide the audience with practical examples. We'll also hold the seminars on different days and at varying times so that you won't have to miss the chance if you don't attend on a particular day.

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated contest last year), hard disk throwing (this year we WILL succeed!), network games, juggling, etc. Everything depends on our finding volunteers to act as game leaders and judges. There will be prizes for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips, etc. We may be able to arrange quantity discounts at the local pizzeria as well as other bonuses.

- WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 100:- (about UKP 8.50)
* Single Entry ..... SEK 50:-

These prices include full access to all the activities being held during NAS97.

- WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

- HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (E-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an E-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your E-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet..se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is: +46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everyting there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile 'phone on +46 70-669 52 35.

WE'RE LOOKING FORWARD TO SEEING YOU AT THE NORDIC ATARI SHOW 1997!

Whilst reading the rubbish I usually find here, Kenneth Jennings wrote some=
thing interesting about "The crown jewels..."

Hello Kenneth,

KJ> Why is it that (some, not all) people with 8-bit equipment think their
KJ> hardware and software are rare treasures destined for the Smithsonian?

Some of it *is*, comparatively speaking, rare. Whether it's bound for the
Smithsonian, I couldn't say.

KJ> I mean the prices I've seen for stuff are horrendous! $22 for a book?
KJ> $15 for a ROM game? I mean REEEEally!

If somebody is prepared to pay it, it must be worth that much to them. Af
ter that, it's simply "Supply & Demand".

I present here my two most recent software which I hope they interest you.
they are progammed by Turbo C++ and run under Windows(3.11 and 95).
here is a short description of these two software.

1-Robot Spy 1.0
at my knowledge, this software is the first and the unique of its kind.
This software allow you to spy your friends who are on the net at the same time
of you, it permits to see exactly what they do on their screen, pixel by pixel,
anywhere, in the world, at the condition they are connected to the internet.
how does-it work?
it's simple, you send a file to the person you want to spy telling to him it's a
game or everythings else, the objectif is this person run the file. from this time,
a batch file is installed on his computor, and everytime this person use internet,
this batch connects him secretly on our server.
on your side, you , after the installation of the other part of the software every time
you want, you can connect on our server with your password and have the list of all the
persons who received your batch and who are connected at this time.
the only thing you have to do is to click on the name of the person you want to spy.
a window opens containing exactly the screen of the person spied, you can have
ten pictures per second with 256 colors, if you switch to balck and white mode you can
onbtain a real time sequence, approximatly 30 pictures by second.

Robot Mailer 1.1
The message you are reading presently is sent to more then 20,000 newsgroups with
this software. This program automates FreeAgent, and reach with a connection of 28,8 Kbauds
5,000 news per hours. It can also find a maximum of 50,000 e-mail adresses from internet
and
send a message in 4 or 5 hours. You can obtain with this sofware the most powerful tool of
mass transmittion on the internet.

Robot Spy 1.0.................20 US$
Robot Mailer 1.1.............20 US$
Both.............................30 US$

I'm sorry i can't accept credit card, but you can send an international money order to:

Ben Hedi Nassef
1481 Ste-Catherine est #7
Montreal, PQ, H2L-2H9
Canada

Don't forget to include your e-mail on a paper, you receice the software ordered in your
e-mail the day we receive the money order.

>Personally, I like removing the protection totally - much safer.
>
The Bit-Writer, an add-on for Super Archiver, was the last word in 8-bit
copypro. I've got such a beast, and it can do almost anything... except for
some CSS wares that were duplicated on non-8bit machines to prevent copying.

Howdy !

For some minutes my floppy drives(HSS 1050) strikes by reading double
density disks with an error "155". As far as *I* know isn't there an error
with this number!

The program atr2dsk is quite painfull! My 1050 'burns' after 1 hour
writing sector by sector :((

try this one:

IT's VERY VERY SLOW but it does his job at least with single density
disks, medium density won't work! It was posted in this group several
weeks ago. So I don't know where to find it... here is it:

for this a hint: start this program with Turbo Basic XL! It will work much
better&faster!

Yes there is a program for emulating SIO commands in Linux/Unix!

It is called psiox002.zip and should be available _somewhere_. I am
unsure if it is specially for Linux or what - but it is a Unix-AtariSIO
server! Of course it has sources included in the zip file, I believe.

Hyperspeed by Len Spencer will give you Flow-controll on the MIO.
Hyperspeed sells for a new low price of $10.00. Len did a fine job on
it to!
My 8bit BBS is ripping at 1900CPS with Ymodem-G, That even better than
the Local IBM BBS's.. Gee and the Atari dosnt even have an ISA bus!
Len also encludes a version for the BB or Black Box that makes the BB go
even faster that it did before.

You mean XIO254.
XIO 253 let you format in either mode with DOS 2.5.
And most people just used DUP to format.

>> >note to nitpickers: PLEASE don't waste bandwidth correcting me
>>if these >are the wrong commands, I don't really care...

It's "@:filename".You never have to put the 0 before the colon.
It's so that you won't accidently erase files.

>remember about the Commodore disk system is that somebody actually
>wrote a program to play music using the grinding noises the 1541

People were talking about that on comp.sys.cbm.

>> Actually, Commodore had an abundance of fastloader cartridges
>>which had, as a feature, a DOS wedge that could be accessed from

Amazing that that wasn't added to the Commodore 128's BASIC.
Instead it has seperate BASIC commands that aren't even named the same as the
DOS commands.I just go to the monitor when I want to do a lot of DOS commands.

>>BASIC. The command you described above would become:
>> @I0:

Once again,@I: would suffice.At least on my 1541 drives it does.

>> Simple, yes? And a plain @ would give the status line. And by

>>strings until you hit the free sectors line.

Remember that DOS 1,2 and 3 all return different last lines.So you should
simply detect EOF and not try to understand the last line (just ignore it).

You can read a directory much the same way with Commodores using a for-next
loop to parse the data.The 1541 manual explains it all.

>Yah, I also saw in that same issue of Compute! a program to read a
>directory off the disk (1541 or older 4040-type systems) and it went
>through all kinds of gyrations.. I guess you would merge it with an
>existing program & call it as a subroutine (merging itself was a
>pretty complex thing on Commodore... I like the Atari
>ENTER"D:MERGE" method)

It probably access the raw directory rather than the parsed "BASIC" directory
that you load with "LOAD "$",8.

I'm sure there's a command to re-direct input to a disk file.
(I wrote a programme that read the input-channel and copied it to the
output-channel.So you just re-directed input to the text file that you wanted
to read,and ran my (ML) programme)

>ANYONE out of the game.

Well Yogi's ATRing of disk images shuts out Atarians without 1050s or DD
drives.Unless you can Xmodem Checksum download the files,which I can't.
Of course I don't really have any disk drives left anyway so I'll have to go
the APE route.

>What's this? Are you criticizing somebody whilst you are the one to

>more and more lusers like you get on the 'net... sigh...)

Unless your posting something huge like Ultima or Alternate Reality:The
Dungeon,I doubt that sysops will mind the "tiny" Atari files.
If you're going to post big files,just upload tem to a FTP site.
(I can't get the binary Atari newsgroup)

Unless your Atari has a hard drive,you'll need a PC to use those huge images.
You can just download the individual files rather than the mega-disk images.
(technicaly,people with double-sided double-density double-speed floppies
(1.44MB & 1.2MB) can use the mega-images.But few people have those)

Source record: 72933

I'm tearing my hair out over this...so if someone could help me out I'd be forever grateful.
After years of searching, I found a 130XE, with 2 1050 drives, one with Happy.
I only have one cable, so I can only use one drive at a time.

When I try to boot from EITHER drive, I get a slow 'beep, beep, beep"
If I open the drive door I get a fast "beep, beep, beep"
The thing is, even thought the drive head 'grinds' for a second when I turn on the drive, the disk doesn't spin.
Both are doing exactly the same thing.
The only thing I can think of(unless both drives are broken) is that this has something to do with the power supply.

My situation is a bit unusual, all the equiptment is US specification. I'm American but living here in the UK, so most of my
electronic gear runs through transformers. The only thing different about the power I'm using here is that it's 50HZ instead of 60HZ at 110 AC. I've never had any other problems with DC motor operated stuff(VCR's, laserdisc players etc). Is the 1050 dependant on 60HZ for some reason? I opened it up and noticed the disk spinning motor is DC, so I'm stumped.

The guy who sold it insisted it worked before, back in the US.

BTW, the 130 runs just fine.

Could someone PLEASE give me some advice on what to check on? I'm an electronics technician, but with no schematics, I have no idea at what I'm looking at. Any advice, no matter how technical would be much appreciated.

If nothing else works, some advice on where I could get a UK spec 1050 and whether or not it would work would be much appreciated.

Thanks,
Chris DiPetta

Get in touch with Bob Puff. His 1050 add-on, the BitWriter, had fairly
complete info on the physical structure of disks. It was intended as a
hacker's tool; might have the info you're looking for.

I have the original compute magazines that outline the 1400XL, 1450XLD,
65XEM and 65XEP (machines that the general public never saw and only a
VERY few have seen them, never mind use them)

I think the 1450XLD was the only machine with the extra goodies (like
built in 300 bd modem! Whoa, that's cool! Built speech synthesis
(similar to SAM so it sounds mechanical), and a built in 1050 like disk
drive) I think the costs were so high for such a machine that it
wouldn't sell.

The PC gameport doesn't do digital controllers... You'll need a USB port
for that. (The Gravis gamepad works by emulating an analog controller)

By the way, the Portfolio was not designed by Atari. It was by a company (in
England, I believe) called DIP. Atari just slapped its badge on it. Around the
time of its release most of the R&D effort was being invested in the ST range.

Does anyone have manuals for any of the assembly language editors out
there? I saw Mac65 but I need to know how to use it.
In school we worked on a small motherboard with a 8086 processor(?)
and a keypad. I loved it so i thought maybe I could learn more using
my good old Atari 800xl..Help Gregg

The Rambo card contains the circuitry that allows it to address 256k instead
of the standard 64k memory.

I have the original compute magazines that outline the 1400XL, 1450XLD,
65XEM and 65XEP (machines that the general public never saw and only a
VERY few have seen them, never mind use them)

I think the 1450XLD was the only machine with the extra goodies (like
built in 300 bd modem! Whoa, that's cool! Built speech synthesis
(similar to SAM so it sounds mechanical), and a built in 1050 like disk
drive) I think the costs were so high for such a machine that it
wouldn't sell.

Yeah, the 8bit stuff is only worth as much as people are willing to pay
for it. $15 for a ROM game is steeop, it better be an unreleased game for
that price! I think $5 for a cart or book is a decent price unless the
materal is VERY rare...

I have a 256k 800Xl as well... the extra ram means you can use a ramdisk (a very fast virtual disk drive) or even use programs that are made for the 130XE (rambo Xl ram is compatible with the 130XE programs) Programs like paperclip XE, CAD XE, Ice T uses the extra ram. There aren't too many out there.. you can even use the extra ram as a printer buffer for printing those long documents, so your 8bit isn't "waiting" around for nothing. To use the ram you need a DOS that supports it...

MYDOS or SpartaDos (version 2.3e or better) have RD drivers and you can run them and set up the ram drive.

Good luck

The mortal Eric R. Balch wrote:
: Anyway, does anyone else remember these machines? Does anyone know someone
: who HAS one?

I have a 1450XL (no drive) hacked into a 1200XL case.

The 1400s are _not_ the same as a 1200XL aside from being designed to use the superior 1200XL keyboard. They have basic rev. B and the true XL OS built in. They also have a PBI interface, speech chip, and 300 baud modem.

The PBI interface logic, unfortunately, can not support the MIO or Black Box because the modem and speech chip are accessed through the PBI as well. However, I have successfully MUXed my 1450XL.

The speech chip uses an SC-01 Votrax chip which is a decent chip with speed and pitch capability but the way it is integrated into the motherboard/OS it seems to be impossible to alter the speed or pitch resulting in a monotone.

: You know what? I think I am drooling all over again.

An Atari 1200XL with the OS, Internal Basic, PBI, RAM expansion, video fix, and a Black Box/Floppy Board would beat the shit out of a 1450XLD, but even a 130XE with a MIO does a lot more real-world work than a 1450XLD.

This isn't strictly correct!! The early 400/800 PAL systems ran on a TV
standard called >PAL M< (Now PAL I) which means it is virtually
identical to NTSC M in colours and scanning frequencies. SORTED!

Yes its a broderbund product, but Electronic Arts turned into a distributor
when the game market crashed. Electronic Arts used to produce and market
its own software, but now it just acts as distributor for software houses.
Many software houses use them to distribute their software, including
broderbund.

For Your Information I've been sick for the last month. Plus exhaustion and being overworked, I needed to check into a Hospital. I'm recovering and time will show how long I need to get to full speed. I'm still working to support Atari Lovers and Users. If I seem unresponsive and slow please bear with me. I'm doing my best.

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, Spectre GCR Macintosh Emulators, MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture &

even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.
--

Chris-
This may be a bit on the fundamental side, but it was a
"Gotcha" to me on one occasion. Open the 1050, carefully lift the
drive mechanism (should be connected to the drive board primarily at
rear of drive.. Once it's "up" check the belt on the drive. One of
mine once slipped off.. Didn't need a new one, it just fell off the
drive -- I'd recently moved the equipment.. I put it back on and
never had another prob. with the drive!! Hopefully it's something
simple like that for you as well. Since you said the drive didn't
SPIN, I'm thinking that may be it.. I held the drive up to my ear and
couldn't hear the motor spinning cause I was expecting the louder
spindle to be spinning...

Hope that's it.

> Your best bet is to get the manual for Atari DOS XE AND a copy of SpartaDOS construction set. These manuals have just what you need. For detailed info (Atari DOS 2.x source) get a copy of the Atari reference manuals for the 400/800. I has loads of valuable info. However, this may be hard to find, where the former should be much easier to locate.

Robert,

If I read the original message correctly, the information he is looking for is not in the manuals you mentioned. He is apparently looking for information laid on the disk by the drive controller when the disk is formatted. As far as the manuals go, the DOS XE manual is just plain horrid (much like the DOS itself). The SpartaDOS Construction Set manual has information about the file structure/format but none on the actual disk format. The same is true for the Reference manuals. Both have the same information about file structure that is in the book "Inside Atari DOS." It may be that an assembly listing for the drive ROMs may have the information needed. However, I don't know where such a listing might be obtained.

Source record: 72947

My mother wanted to "learn about computers" - specifically how to use a word processor - on a computer she could use without fear of "messing something up". So, I set up my old 800 for her (she likes that keyboard best) with a spare drive, and gave her a copy of Speedscript to play with. She's doing well, learning in her own time at her own pace.

I picked up a Commodore 1802 monitor in excellent condition for her today. The woman wanted $10, but I talked her down to $5. Aren't garage sales marvelous inventions?

The jury's still out on whether I like it better than my own 1701. So far, I don't think so, but only because I prefer the controls (contrast, color, tint, etc.) on the front. We'll see how often they need to be changed.

TJ

4417. New Retrotek Classic Video Games Auction

Hi Guys!

We're back!!!!! It's been hard to find new supplies lately so here's
what we have for our extras. We now quote exact shipping costs for USPS
and UPS for all winnings.

There are a few Atari computer software items and books near the end.

Let us know if you want to be on the update list!

Thanks!

---------- GUIDELINES ----------

1] ***** Shipping *****

Shipping costs will be the responsibility of the buyer. At the end of
the auction, EXACT shipping costs will be assessed by weight and zone
via UPS and totals will be EMailed to the winners. All packages under
5 lbs. will be sent USPS. Do take into account the weight of
what you're bidding on BEFORE you make a bid, especially if you are
from outside of the U.S.

2] ***** Bidding *****

SERIOUS BIDS ONLY!!!! Please, only bid on items if you
intend to BUY! Bid withdrawals are NOT PERMITTED and are
grounds for exclusions from future auctions and sales.
(Plus it ain't very nice....)

3] We reserve the right to make corrections to and retract any
item from the auction. (Will only occur if there is an error.)

4] Trades are always considered. We reserve the right to trade
an item at any time during the auction.

5] This auction will run with open bidding until May 31, 1997.
At that point no new bids will be accepted and we'll go into the ONCE,
TWICE, SOLD mode.

6] Bids must be in even dollar amounts.
Under $20 --------- $ 1 increments
$20 to $49 --------- $ 2 increments
Over $50 ----------- $ 5 increments
**IF YOU DO NOT USE THE PROPER INCREMENT, YOUR BID WILL NOT
BE POSTED.

7] Please include your name, shipping information and "auction
name" along with your first bid. If you had bid in a previous auction,
we will use the same info. If anything has changed or you want to use a
different biiding name, let us know.

8] All itmes have been thoroughly cleaned and tested unless
otherwise noted.

9] Once you bid or ask to be put on the update list, your name will be
placed in our address book so that you will automatically get all
auction updates for current and future auctions. If you do not wish

to be in any current and/or future auction update mailing, let us know and we can either permanently or temporarily remove you from the list.

**** Payment Policy ****

At the end of the auction after total winnings with shipping costs are EMailed to the winners, please send a check or Money Order (US$) - M.O.s preferred - within a week of notification. We'll post our mailing address at that time. Checks must clear both banks before we can ship your package to you. Money Order packages will be sent out within three days of receipt.

***Lack of payment received will result in forfeiture of participation in all future auctions held by us.

sorry, but I would recommend the C-64 M.U.L.E. version. The 8-bit atari
Emulators aren't good enough to handle such a good game. The C64S emulator
from *** (dunno the name of the author) is pretty good. Really.

From: Eric BACHER <ebacher@teaser.fr>
Message-ID: <5ljo28$2v4$1@news.teaser.fr>
Source record: 72953

Hi,

Does anyone have WDC1771 controller documentation?

I would like to understand the 810 ROM code and I do not have the meaning of the commands that are sent to the controller.

I have disassembled the stock 810 ROM code and added comments everywhere to be more readable and understandable. If there is no copyright problem, I am willing to put a complete explanation of the 810 (part of schematic, source code, comments,...) on the WEB for everybody. This way, everyone could try do modify the code and replace the original ROM code by his modified one. I know that most people do not use 810 disk drive anymore. This is why the 810 is a perfect platform to test some enhancements.

I see that commands $0B, $2F, $57, $77, $EC and $FF are sent to the controller. I don't know if each bit has a meaning or if byte values are important. If anyone could either explain what it means or send me a photocopy of the documentation (would be appreciated), that would be great !!!

Thank you very much for your interest.

Eric.

>which is something I would like to keep.
>
>Is it true that the MIO doesn't support RTS/CTS? Any workarounds?

MIO does have the hardware for RTS/CTS, it's just not in the handler. Len
Spencer (don't have his address handy) has a high-speed MIO/BB handler,
which optimizes speed. He sells it for $10; not to shabby. If you're
interested, let me know and I'll dig out his address.

Robert S. Ely Responds..

<< Keep in mind that the HSync/color burst is a much higher
frequency. for NTSC is 3.159MHz (x3 for RGB or aprox 10MHz) and VSync is
just shy of 60Hz (59.9...HZ). That is why there are 2 crystals.

Robert S Ely --- Communications Systems Technician
rsely@dhs.state.nj.us -or- rely@ix.netcom.com >>

Thanks Rob I don't really see why it should be that high. I mean the GTIA
chip doesn't produce actual RGB! It's plain vanilla COMP VIDEO and a
separate feed of CHROMA or LUMINANCE. But anyhow thanks for the message.

Best regards,
<Richard>

4433. datasheet for PIA

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-18 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <5lm89j$kgr@freenet-news.carleton.ca>
Source record: 72961

Anyone know where I can get a datasheet for the PIA? I got a nice
sheet on the CIA from the C64 archives, but i cant find anything online
about the PIA that describes the time required to switch its outputs, etc.

any ideas?

> mhop@snip.net
Hi Mike,
Never programmed in C(), but did use ACTION. Should have been pushed
harder. Slightly more difficult to learn than BASIC, but e-gads what a
power house. Very flexible, very fast. To get faster or smaller you
would have to go to assembly language. Find sample programs in ANTIC
and A.N.A.L.O.G. The manual was only fair and a lot of what you learn
will be by experiment.

4439. Is it OK to use Atari 400 power supply for Atari 800?

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-18 00:00:00 UTC
From: Barry Obut <barry@dsd.ml.com>
Message-ID: <EAEE24.B9q@nonexistent.com>
Source record: 72967

Hi,

I'd like opinions on whether it is safe/wise to use an Atari 400 power supply for an Atari 800 with 48K. Both power supplies are 9VAC. The 400 supply is 20W input 15VA output, and the 800 power supply is 50W input and 31VA output. Does the 800 really need this heavy duty a supply, or is it just overkill.

I realize that you should always use what the manufacturer recommends, etc. etc. Comments along these lines won't help me. What I am really looking for is someone who has tried this (either successfully or unsuccessfully), and or someone who has an educated point of view.

Please email and/or post comments.

Thanks,
Barry

>Not quite sure what you are looking for here....
The checksum on the Atari is generated between the serial devices that are transferring data. It is not stored on the disk per se. The CRC characters that are stored on the disk records are generated by the disk controller chips, which use the industry standard IBM 3740 format, I believe. The number of bits per track is not defined, really, but allows for 18 sectors per track. Data rate is 125Khz. Rotational speed is 300RPM. 125Khz x .2 sec = 25,000 bits per track? (why do you care??). The actual sector, address marks, ID markers and all that are, like I said, IBM 3740. 40 bytes of $FF, 6 bytes of $00, $FC, 26 bytes of $FF..... (yuck, who cares?)
For 1050 density, the Atari uses a 250Khz clock, but keeps the 128 byte sectors, all in IBM System 34 format....

4446. Atari 600/800XL keyboard info?

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-19 00:00:00 UTC
From: ai123@FreeNet.Carleton.CA
Message-ID: <5lohus$m76@freenet-news.carleton.ca>
Source record: 72877

I've been looking at the 800XL schematic, and I think I understand now
how it scans the keyboard, but if anyone who has done this before
can help?

Is the pokey scan of the keyboard part of the chip design or is it
all controlled by software? eg the OS puts each of 8 columns out and
then reads all the row bits to see if a key is pressed?

It looks like U24(3) is floated high, but goes low if a key in the
selected column (via U25) is pressed.

I assume this because the I/O(3) of U25 is tied to ground, so U25 can only
act as a switch to ground, depending on the address selected?

Why if I put an input row directly to ground for a moment does it
not generate a keystroke, or does it just think a whole row is
pressed since im obviously not fast enough to catch just one column being
probed?

I only have a schematic for the 800xl, do the 130xe and 1200xl units
use the same matrix and read hardware?

Thanks for any info.

Steve

I was there from 1985 (just before the ST was introduced) until 1990 when
the Atari stuff started to get phased out. I left before the Jaguar was
brought out and just as Silica started to move more towards the PC.

4450. Bug in Assembler Editor cartridge

Newsgroup: comp.sys.atari.8bit

Message-ID: <5lpkhunme1@news.teaser.fr>
Source record: 72881

Hi everybody,

That's not really important but I try to remember something about the ATARI Asm/Ed cartridge. I know there is a bug when you trace a specific instruction which uses the X index register (something like LDA addr,X) but I can not remember what was the exact problem.

Does someone know the problem ?

Does anybody have the fix for this bug ?

Thank you very much.

Eric.

> like the standard 130XE RAM or free availble for BASIC??

Sort of like the 130XE (but you can't bank Antic separately from the CPU,
the switch banks both chips to banked ram -- different from the 130XE
which can bank the display separately from the CPU but doesn't provide as
much RAM -- other memory upgrades operate differently, there's one that
does not bank the Antic at all, just the CPU... it makes a difference for
some programmes, for example, Atari Planetarium checks for banked memory
and if it finds it, uses it (partly) for screen images, attempting to bank
just the display -- on the Rambo this banks the CPU as well, leading to a
lockup (I edited the file and killed the test for banked memory, running
the programme slower, but as if on an 800 without banked Ram). Not
available for Atari Basic. Ram only available for Ramdisk and programmes
that recognize it (and use it correctly) (some programmes are designed for
other memory upgrades, some for the Rambo and some test for the type of
upgrade).

> Rotational speed is
> 300RPM.

288 RPM for the 810, 850 (has anyone ever seen one of those beasts?), 1050, Indus GT, etc. The last Atari disk drive (the double sided double density which was... damn, just had it on the tip of my tongue!) was at 300 RPM (which led to problems... the XEGS came with Flight Simulator and one could get the new drive and extra scenery disks... which would not work, since the software used the RPM/timing as part of the disk protection/validation and assumed an Atari drive of 288 RPM... the change in speed led to some programmes whose copy protection depended on timing and what sector is under the disk heads at what time being unusable on the new, 300 RPM, drives).

To all Atari 8-bit/Atari ST users

Hi,

I am the programmer of the SpartaDOS NN Tools disk 1.

Some of you know who I am since you have downloaded the NN Tools files from my autoresponse SMTP server.

I am also the owner of a small ISP in Philadelphia, PA (www.cybernetworking.com).

I have an idea of creating an Atari 8-bit and an Atari ST listserv (preferably will be done in digest mode of 10 messages). The catch is that it has to be USER supported.

I have given this a lot of thought and have come up with $24.00 per year for access to both lists. A WEB site for Atari 8-bit and Atari ST links will also be set up and I will add as many links as are submitted, maybe even creating a search engine(?) for Atari related stuff (but this will only happen after the lists are set up and stable). Latter the lists may also be broken down into sections, Atari ST C programmers, Atari 8-bit Action! programmers?, etc. Maybe done through a vote?

Running a list server can eat up a lot of bandwidth so the user supported list is the only way to go. This will allow for the purchase of the listserv software, more bandwidth and, of course, to pay for my time and server use.

I really need to hear from you, whether it be a complain, insult, support, or idea. Send e-mail to atari@cybernetworking.com

All,
It also has more built-in and linked reserved words. So far there is NO version of BXE on disk or for the emulators. Here's my hope that someone can build this for the emulators. I have the cart for my 130XE and use it regularly, but wish I could have it available for PCXF360. I've written quite a few programs that use the extensions that won't run using the BASIC XL runtime package, which, BTW does run on PCXF360!

DDT in the Atari world is the Developer's Debug Toolkit, while others
may exist, I know of ones for ACE C, ACE Basic, Turbo Basic, and Turbo
Basic XL.

To all Atari 8-bit/Atari ST users

Hi,

I am the programmer of the SpartaDOS NN Tools disk 1.

Some of you know who I am since you have downloaded the NN Tools files from my autoresponse SMTP server.

I am also the owner of a small ISP in Philadelphia, PA (www.cybernetworking.com).

I have an idea of creating an Atari 8-bit and an Atari ST listserv (preferably will be done in digest mode of 10 messages). The catch is that it has to be USER supported.

I have given this a lot of thought and have come up with $24.00 per year for access to both lists. A WEB site for Atari 8-bit and Atari ST links will also be set up and I will add as many links as are submitted, maybe even creating a search engine(?) for Atari related stuff (but this will only happen after the lists are set up and stable). Latter the lists may also be broken down into sections, Atari ST C programmers, Atari 8-bit Action! programmers?, etc. Maybe done through a vote?

Running a list server can eat up a lot of bandwidth so the user supported list is the only way to go. This will allow for the purchase of the listserv software, more bandwidth and, of course, to pay for my time and server use.

I really need to hear from you, whether it be a complain, insult, support, or idea. Send e-mail to atari@cybernetworking.com

The POKEY scan appears to be all hardware - you turn it on with s/w and
it runs by itself.

> It looks like U24(3) is floated high, but goes low if a key in the
> selected column (via U25) is pressed.

U24, pin 3 goes low during the address of ANY key pressed.

> I assume this because the I/O(3) of U25 is tied to ground, so U25 can only
> act as a switch to ground, depending on the address selected?

This seems to be the case - U25 grounds the columns and U24 drives the
rows.

> Why if I put an input row directly to ground for a moment does it
> not generate a keystroke, or does it just think a whole row is
> pressed since im obviously not fast enough to catch just one column being
> probed?

Yeah, that does not work.

> I only have a schematic for the 800xl, do the 130xe and 1200xl units
> use the same matrix and read hardware?

Yes. Looks like it - same pokey, same 4051 ICs.

Fine Tooned Engineering released the "Sweet 16" in '95; there may still be a
few at some of the Atari resellers (like B&C). As well, Atari Classics had
an article on adding a 65816 on the PBI, giving your 8-bit parallel
processing. It was fairly complex though, and there were never full plans
or schematics released.

You may want to have a look at Mario Trams' Hyperspeed XL/XE upgrade. A description and schematics are available on

http://www.uni-karlsruhe.de/~Marek.Tomczyk/Hardware/hard.html

Unfortunately all the description is in German, but the the schematics contained therein should be able to give you a clue.

Woo! I just got AR-City on my Amiga - certainly brings back the memories!!

But what`s this???

The super sound effects are missing :(No clanking Smithy`s anvil, of whoosh of his bellows; no fighting noises from the arena, or trumpets from the Palace. The eerie wind noise has gone, and was there ever a thunder noise during the storms?? And the waterfall has gone, so you can`t figure out which way you are going if you don`t have a compass :(

I couldn`t believe how much I remembered, either - almost 10 years since I last played it properly (on my XE :) ), and I still managed to run around to 5 guilds before dying :) .... But I didn`t have to reload! Yay! And you can restore a dead character twice before it is purged! Great!

And I can get jobs; a welcome addition, since I *always* used to run out of money on the Atari version :(

Caloo, Calay, Oh Frabjuos Day! ;)

Nostalgic Regards,

BigBro`

Yes, wasn't it a nightmare getting served? On a Saturday they were 5 deep in front of the wooden desks. The worse thing was that you had to ask to see any of the boxes, and also the fact that half of us working there were larking about in the back office. The shop looks good now but it lost it's charm. I have a lot of great memories of working there as a Saturday lad working on just over a pound an hour.

Don`t worry, we knew you were all in the back, no doubt with a Happy
drive or an Archiver.. :-)

I met my 1st Pirate there, a guy called Reg who used to wait for
people to pick up boxes and tell them they could have it at half price
without a box (I dare say there were guys like him in every shop at
that time)....

I remember waiting in line to have a go at Jumpman and Bounty Bob
during those busy saturdays...Good times, busy but good..

Just over a quid per hour..Overpaid or what...

You mean a mailing list? Listserv is a program.

>I have given this a lot of thought and have come up with $24.00 per year
>for access to both lists.

Sorry, you want us (list users) to pay to have access to what we will
write to the list?

>A WEB site for Atari 8-bit and Atari ST links will also be set up and I
>will add as many links as are submitted, maybe even creating a search
>engine(?) for Atari related stuff

How much? $30 for links page, $40 per year using the search engine?
Links, that's good, but what about real content?

>Latter the lists may also be broken down into sections, Atari ST C
>programmers, Atari 8-bit Action! programmers?, etc. Maybe done through a
>vote?

That's a good idea. Strange that nobody had it before...

>Running a list server can eat up a lot of bandwidth so the user supported
>list is the only way to go. This will allow for the purchase of the
>listserv software, more bandwidth and, of course, to pay for my time and
>server use.

Many mailing lists run for free, on servers where ML used bandwidth
and CPU time is nearly not noticeable. There are freeware ML programs. You
can even set up a simple ML without special software, only with sendmail,
or even NOS.

>I really need to hear from you, whether it be a complain, insult,
>support, or idea.

Well, your idea to make money on our back is not so bad, but you
should perhaps make a "reality check" on your motivations...

Bye! Bruno.

I just talked to him the other day on the phone, regarding obtaining his R: Handler software for my MIO. He told me that he will no longer be supporting the software, and will either hand it over to Tom Hunt, or release it into the public domain. Either way, he said he's post an announcement here "Very Soon!"

Too bad he's letting it go..

I don't think a 8-bit email-list will eat up any bandwidth, and if you happen
to run any decent (ei UNIX) OS on the server, several listservers can
be found for free.

Even for the ST, I can see no need for yet another source of information.
Especially if it will cost money.

Please don't hurry him!!! The Emulator is already GREAT, and you can't
expect from him that he is only working at XL-It... I'm almost sure there
will be next version in the future, but he can take is time :-)

But you are right... it IS the best 8bit emulator ever seen !

Source record: 72825

Hi everybody!

If anyone out there happens to have schematics for a memory upgrade for the Atari 400, or know where to find them, I'd be most grateful.

I just found my old Atari 600XL when I looked thru my collection of old computers, and just realised that I'm not the only one who still like these machines. (Come to remember that my uncle still has my Atari 400, thats why I need to know how to upgrade that too!).

Greetings, Zaphod Beeblebrox

P.S Ever seen any 8-bit software cracked by "C.A.K.E"?
That was me and one of my friends back in the good old days...

"Nelson Nieves" <Nelson@cybernetworking.com> writes:

<message about user supported mailinglists...>

I think it's insane to ask money from people so they can be on a mailinglist.
Besides that, I don't like the idea to to have both 8-bit and 16-bit
users on the same lists. That's just a little too much. Also, I wonder if
there's any need for a mailinglist, but if there is, I will gladly setup
one at my site, for free, with an automated WWW/FTP archive. Sorry Nelson,
I don't want to steal your idea or something, but no person will pay
24 dollars to be on a mailinglist which might be one with huge mails
everyday, almost no interresting things and does no more than raise
your phonebill.

4497. sio2pc for linux (femul) v 0.0

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-21 00:00:00 UTC
From: pavel@atrey.karlin.mff.cuni.cz
Message-ID: <5lv1bb$b36$1@ns.felk.cvut.cz>
Source record: 72829

Hi!

I tried to port sio2pc under linux, and it seems that it works
(somehow). At least atari now can read one 90K image. No writes for
now. Test it if you want, no privileges required (but you need to have
access to /dev/cua1). Feel free to modify the source & email me back

Pavel
the results. (Succewss reports welcome - I never SEEN it running as my
atari lacks any television...)

```
/*
* This is Floppy EMULator - it will turn your linux machine into
* atari 800's floppy drive. Copyright 1997 Pavel Machek
* <pavel@atrey.karlin.mff.cuni.cz> distribute under GPL.
*
* You need to use sio2pc cable to run this (I use hack with 75LS149,
* and it works for me). It may or may not work for you, try cable
* with sio2pc.com first!
*
* Writes are done, but not saved back to files.
* Currently only 90K .atr files are supported, only D1: supported.
* This is really alpha.

FREE + you pay Shipping (USPS Parcel Post, the cheapest):
Commodore 1526 printer with power supply and without I/O cable.
Commodore 1530 Cassette Drive.

I want to keep my Fortronics (Commodore 1530 clone) Cassette drive
with the hope that some Hacker would know how to modify it for use with my
Atari 130XE. Someone said these are more durable than Atari 1010's and
410's. Give me the Hack to modify it and I'll prove that idle claim. I
suspect there are too many radical differences between the I/O software
commands for the Commodore and the Atari to make this work like I want.
Hackers please advise me!!!!!

If it can't be done, then this Fortronics Cassette Drive is FREE + you pay
Shipping, too!

Rainbow 95 - Easy Speed Up

Dear Rainbow 95 users everwhere,

If you don't have DirectX 3 installed then it's a good idea to do so since the sound routines in DX3 are significantly faster (games with intensive sound may speed up as much as 20% to 25%).

Try the following URL

http://www.microsoft.com/mediadev/download/directx.exe

(this was okay some months ago but may have changed...)

Good luck,

Chris Lam,
Rainbow/Horizon Keeper.

In an article dated Mon, 19 May 1997 21:40:21 -0500, someone named Jim Klein says...

>
>Anyone have a used upgraded RAM card for sale for the Atari 800?
>
>I'd like at least 256k...
>
>-thanx-
>
Check out http://www.myatari.com

It's the B&C website, with a full list of their stock. Atari 800 256k boards are listed; but I don't recall the price.

> lpkelley@express-news.net

Agreed. I never used a 'C' on the Atari (OSS sold something called C65)
but the Action system was simply amazing. Nothing else in 8 bit dom
existed in terms of that execution speed. If you have a chance see the
review from Analog Feb 84.

The fix for the problem was to use MAC65 from OSS. A much better
product, and it includes DDT.

>writing sector by sector :((

Errors vary depending on the DOS version you use. Sparta 3.2 and SDX don't
list an error 155 (just checked my manuals), but other may be different.

Atari items for sale. I'll pay 1/2 the shipping and handling costs but NOT the C.O.D. charge. If you
don't believe the prices are fair I am willing to listen to your offer. Enjoy!

1) The Hitchhiker's Guide to the Galaxy --Infocom text game. Original box and manuals. Check it
out the props are still in the box! Price $5

2) Flight Simulator II --subLogic flight simulator. Original box and manuals. Including the
navigation maps. Price $15

3) AtariWriter and Atari Proofreader --the classic word processor and a dictionary program.
Original manual including the quick reference sheet for the AtariWriter but no documentation for
the Proofreader and no box. Price $25

4) Movie Maker --an animation construction set by Electronic Arts.
Original manual and box.
Price $10

5) 5"1/4" Disk Organizer with disks! --a grab bag of software everything from Antic Magazine
disks to games like Mail Order Monster and Summer Games both classic 80's computer games.
Price $25

6) Atari 1010 Cassette drive --not sure if it works but power supply and light seem to work. Also
included is the data cable and a conversational French program. Has sound and original box and
manual. If anything this is the first multimedia device for the Atari!
Price $10

7)Atari 1027 Daisy Wheel printer --not sure if it works but power supply and light seem to work.
Also included is the data cable. Price $10

Last time I went into Silica, about a month ago, I could see the two sales assistants playing Doom on the dsiplay machines. They promptly stopped playing and jumped out of their seats when they saw me walk in. "Hello sir how can I help you?" Needless to say these morons knew nothing and couldn't help. The shop was fairly empty and very clinical.

I too remember the good old days of Silica.

4516. True Double Density and XFD

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-22 00:00:00 UTC
From: royvarg@leland.stanford.edu
Message-ID: <33840554.77BB@leland.stanford.edu>
Source record: 72847

Can someone tell me if the XFD file format supports true double density? I have several DD disk images that I transferred from floppies to my PC in a custom format, and I would like to convert them to a standard format that can be used by XL-it. I read in a message a while back that XFD was just for single density, but I really don't want to try manually converting to the ATR format if it means calculating CRC values, etc.

I think I'm right in saying that the management of the company changed hands a while back and they changed it from the niche it had to just another retailer. Then again maybe it's just the fact that we remember the good things and not the bad.

It would still be good to find some of the old Saturday Silica boys.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 800XE, 65XE, 130XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Keep in mind that most of the emulator programmers want the ATR format to be the standard and forget the .XFD format. The .ATR format is more configurable. BTW, there are programs that will let you move files between of .XFD/.ATR images and PC directories. There are also some for converting .XFD <=> .ATR formats. I believe IMagic is one of these. IMU14 is one that moves files to/from PC directories into/out os .XFD images. Unfortunately, at leaste at the moment, it only does .XFD. Don't use it on .ATR images. It will corrupt the ATR image. Bothe of these programs and others are available at gopher://gopher.archive.umich.edu:7055/11/atari/8bit.

Ooops... yep... the only time I ever saw just a picture of one was in the
810 user's manual/guide (DOS 2.0D ONLY supported 256 byte sectors and
could only be used on the 815, according to the guide... so one could not
mix 810 and 815s or use single density disks in the 815, I believe)

You need a terminal program that will give you 80 columns on the screen and VT-100 emulation. There are several, and depending on your 8-bit's capabilities and your personal preference you can choose among several versions of Ice-T and FlickerTerm. There are also some others, whose names I've forgotten.

Beyond the terminal program, however, how will you reach the Internet? You need either an ISP that will allow you a shell account or you need to subscribe to a service like (ugh!) GEnie. If you wish to access the WWW, your service would also need to be running a text-based browser like Lynx. While you won't be able to see graphics on your Atari, the filenames of those graphics will appear in different text (underlined? I don't remember) and clicking on them will allow you to download the picture.

That brings us to another point. If all you want to do is text, slow modems are not a problem. But if you want to download, the fastest modem your Atari can handle will be a plus.

I would advise against using an 8bit atari to access the Internet because
there are limited resources to do so. I think Ice T and a couple others
programs can do it, but you are really better off (if you want to use your
8bit) is call dial-up a provider (and get a text base Lynx-style browser)
I've called the University of Toronto with my Atari and access this
message base that way. But a full colour/with sound browser for the 8bit
I dont think is very feasible. (I don't even know if it exists)

Alan
(who is using his 486 right now, may God forgive me)

Tltle says it all. I am looking for a working printer with the following specs.

Star Gemini NX-10
Star NX-1000
Star NX-1001
Epson FX-80
Epson Compatible of any kind that is 9-pin and has an NLQ mode. Will consider 24pin if cheap enough. I am willing to spend 25-30 dollars tops + shipping. I don't want someones junk please. It must work properly, have power supply and would like owners manual if possible. I have seen this type of printer available so I know they are out there at these prices. Please respond to lmartin@midamer.net

Thanks

I've got some old Atari 800XL stuff, along with a couple of old
Hayes modems. Everything is used, as is. Except where I note
otherwise, everything was serviceable the last time it was used.

Is anyone interested in paying something for this stuff?

If so, please msg Frank DuBose -- picker @io.com

1 Hayes Accura 144 + FAX 144 modem, Cords & Disks
1 Hayes 1200 modem,Power cord only
3 Atari 800XL computers (1 serviceable, 2 Unserviceable (for parts))
2 Power supplys for the 800XL's listed above.
1 Atari 1050 Disk Drive with Power Supply
1 Atari DOS 3 Diskette
1 Atari 1010 Program Recorder (Not fully serviceable. Front panel
is semi-detached. Play, record, fwd, fast fwd work last time used
(last summer)- no reverse). Power suppy
included.
1 ICD P R Connection with manual
1 Joystick
4 Switch Boxes to connect to computer - some may be unserviceable
17 Diskette games with play books - plastic bags, no original boxes

The 800XL power supply model numbers are listed in section 13 something
of the Atari 8bit FAQ. You might try Toad Computers or Bravo Sierra. I
bought an old power supply from Toad last fall.
Best wishes,
Frank

Well I'll third that!! 8-)

For those of you that don't know Markus also develops a Sega Genisis emulator. I just hope that the console warez dudes don't discurage him to devolop his emus(especially Xl-IT) any further. Conpared to computer sytems it appears that the console crowd complains about things like "Why doesn't xxx work " or "can someone post xyz". To me the console crowd that's only interested in warez only hurts us 8 bit enthusiasts. Just imagine being Markus and receiving the requests for Genisis roms. I hope people actually read the docs and avoid the rom requests. If the people who make the requests actually knew how hard it is to emulate a system then they might understand. Well let us all enjoy the latest Xl-IT and look forward to future versions!

Thanks Markus for your wonderful emu!!!

Sasha

Well, this article should have been posted in comp.sys.atari.st, not the
8 bit usenet newsgroup.

Anyway, .st files will work well with the PACIFIST ST emulator, using the
Windows 95 PACILOAD frontend. There is no need to convert them back to
MSA files. Both of these programs are readily available on the net.

If you aren't using Windows 95, then I don't know.

Well he just came out with GenEm 0.19.....
.20 is pretty good for a ".xx" version.

Still needs a few p/m bugs fixed, but it seems to run pretty good now.
I'd say its the best one yet.

I would suggest you start looking at garage and church rummage sales. A lot of people are getting new ink jet and laser printers and putting their old dot matrix printers out for sale even though they still work just fine. A few years ago I bought an Epson LX800 (9 pin w/NLQ) for $20 and all it needed was a platten knob. After a lightning strike took that one out I found a Star NX 1001 at a church sale for $15 in perfect condition. Just last week in a large neighborhood sale I saw an Epson LQ 510 for $20, a Panasonic KXP-1124 for $15,and an Epson FX 86E for $7. All were supposed to work.

I probably should have bought the FX 86E to replace my current backup printer, a Gemini 10X, but I didn't. Oh well, another deal will come along.

You can find good deals on paper, too. I bought a 2550 sheet box of Ampad paper all but full for $5. You can't get one of them for less than $20 these days, even in somewhere like Staples or Office Max. I bought about 1000 sheets last week for 50 cents, and they even through in a dust cover for an old Mac that just happens to fit my Commodore monitor. People are selling their old fanfold paper because their new printers won't handle it.

TJ

>It's so that you won't accidently erase files.

According to the Compute! article, this was exactly what produced the save &
replace bug. Using 0 in all your commands, even though it is supposed to be
optional, prevents the bug from occuring.
Disclaimer: This is based on my memory of a 10 year (or so) old magazine
article (which I read, well, 10 years or so ago). Use save & replace at
your own risk--after experiencing the bug myself long ago, I prefer to just
save a new file instead and delete the old one when I feel like it.

The 850? I thought that was the RS232 interface. I seem to remember
that Atari was planning a double density drive in the 800 days, but I
don't remember the model number. It never reached production, either,
AFAIK.

> 1050, Indus GT, etc. The last Atari disk drive (the double sided
> double

The XF551? I never did see one of these... (I have several 1050's and
an Indus. I guess I even have a Percom, though I have not used it.
Never used an 810, either.)

Markus stated, when he released 0.20 that he would have to slow down
development of XL-It! for a while because he had an assignment to develop
something commercially. Something has to pay the bills, and somehow I
believe Markus will get back to XL-It! when he has a clear head for it.

I second the motion Marius just made. Don't rush Markus!

4535. Turning atari800 into vt100 (so that sio will run as ordinaryRS232)

Newsgroup: comp.sys.atari.8bit

Source record: 72866

Hi!

I would like to turn my atari into vt100. I would like to do it so
that sio will be used for rs232 serial only. Like - I boot atari from
somewhere, than unplug sio cable, plug it to other computer (via
sio2pc) and now I would like atari to pretend it is real vt100. Atari
will have to forget its own serial protocol: I need vt100, not
atari...

Can someone help me?

I have an Atari 800XL that seems to get power (I see the power light on) but I get no response from it. Nothing but a power on light. I would like to trade this unit minus power supply for a working model plus some fee. Anybody interested?

Please state your fee and how to get ahold of you to tgreen@earthlink.net.

4540. Frogger source? (was Re: FS: Atari 400/800 Manuals)

In an article dated Tue, 20 May 1997 23:41:12 GMT, someone named Steven E Kranish says...

>
>For Sale: large carton of Atari programmers manuals. Used by
>professional developer. Mapping the Atari, De Re Atari, operating system
>manuals. Technical reference notes, Antic magazines.
>
>Email skranish@world.std.com for a more complete list.
>
>For Sale as a group ONLY. I am not willing to sell and ship individual
>items.
>
>Free to lucky buyer: complete source code to Frogger, provided you agree
>not to admit where you got it.

Um, does this have anything to do with John Harris' infamous disappearing Frogger source? Sounds like an interesting story...

And the #1 most frequently asked Atari 2600 question is... <drumroll>
"What kind of power adapater do I need for my 2600?"
The answer? 9 volt @ 500 mA with a 1/8 inch, possitive-tipped plug!

4543. FS/T: Atari 8-bit computer items [05/23/97]

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-23 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <338645fb.12724145@nntp.ix.netcom.com>
Source record: 72724

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 05/23/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 4.00 Atariwriter
$ 4.00 Basic -- for use with the Atari 400 and 800
$ 5.00 Centipede
$ 9.00 Delta Drawing (Spinnaker)
$ 8.00 Frogger [Parker Brothers]
$ 2.50 Missile Command
$ 2.50 Space Invaders
$ 4.00 Star Raiders

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).

$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$29.00

*****

LOT #2

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 5.00

*****

LOT #3

ATARI 820 PRINTER, with two (2) rolls of paper and built-in
power cord.

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$14.00

*****

LOT #4

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$19.00

*****

LOT #5

EPSON RX-80 PRINTER with built-in power cord.

$39.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

To reserve any item(s) listed here, please do the following:

1) carefully read the SALES CONDITIONS section first,
2) send me a list of the items that you are interested in,
3) include your full postal mailing address (this information is
for internal VGA use only)!
4) I will reply with a shipping information message for your order.

Thank you!

> will have to forget its own serial protocol: I need vt100, not
> atari...
>
> Can someone help me?

It's simple. You need two software pieces.

First: a Terminal program; Bobterm is cool, but without extra hardware only
40 col.; then there is FlickerTerm. Very good and compatible, but very
irritating flickering of the screen. (good for 64K comp). You can use Term
80 (made by Tom Hunt) and, and that's what I use > Ice-t (128kb requierd...
there is an 64kb version but that isn't that great)

Second: you need the driver for the RVERTER. If you bootup a terminal
programma AFTER you loaded RVERTER.COM or RVERTER.HND your sio2pc cable is
acting like a serial null-modem cable, and in that way you can communicate
with other VT-100 terminals. This is the way I do it.... with PC-Anywhere
you are even able to use your PC-Modem, connected to your pc, unstructed by
you via the ATARI-Terminal software and sio2pc cable!!!

More questions? Mail me.

While Dejanews is a good suggestion for finding old news, it would
also be helpful if people would simultaneously send him an email with
the answer rather than just a news reply. News can be easily missed
or screwed up in the works somewhere.

Cheers,

Jon

Uh, a REAL Atari8 NEVER came complete with a monitor. Tint, contrast,
color, etc al are in quite a variance between different color TVs and
monitors, especially of that era. Try to keep that in mind. I'm sure
one of those colors is the "right" one but looks do vary.

Cheers,

Jon

>They're Atari COM files.Why they're called EXE I have no idea.

But I DO have an idea. They have an extension of .EXE because they
are machine EXEcutables. The .COM extension was originally associated
with COMmand files, which are a special or particular variety of EXE
that are designed to provide a certain utility or assist the machine's
operator. Somehow, the .COM extension just sort of took off with the
Atari8. The result is that you have some Atarians thinking that only
.COM is an acceptable extension for a binary executable because that
is all they've known and don't understand some of the finer points of
file naming conventions.

Cheers,

Jon

Well I have owned all kinds of ATARI. But I sold them 10 years ago.
Yesterday I was surfing the web for NEZ simulators for a friend of mine.
Then I found some ATARI emulators. Wow did I feel happy when I saw the
READY promt.

But I cant get it to work with the ATR files.
How do you load, for example, Boulder Dash. It's 3 files.
I load file 1, and then it starts playing the music and the start
picture is there. But I can't start the game. And I dont get the
possibility to load the files 2 and 3.

I also tried another game. After I loaded the firsth file it asked me to
flip the disc. I did and it loaded just fine. But it did not start the
geme.

I will be very greatfull for all help I can get.
Jan Gustavsson

Jan,
First off, which emulator are you using? Generally, you string the disk image/.EXE filenames right after the program name: C:\PCXF360\>Xformer -j -s -x sd33-1.atr boulderd.exe.
This would execute PC Xformer use the Joystick port, sound card and an external (pcxformer cabled Atari disk drive) then use SpartaDOS 3.3 to boot as D1: and Boulder Dash I as D2:BOULDERD.EXE. You'll have to "reset" the emulator to run BASIC disabled. It works fine. Check the emulator's docs for detailed info on running programs.

You're right about the size of the code, but I once built a couple of
demo screen saver type programs to see what the difference between
assembly and Action was. The conclusion I came to was that I needed a
better stopwatch, since I couldn't tell the difference :-)

Not really. The bug can still crop up, depending on various complex
circumstances within the 1541. I don't recall the details, but dig for
articles by P. A. Slaymaker if you're interested. They're in Compute! and
there are a bunch in The Transactor as well.
Incidentally, this is one case where Dick Immers and Gerry Neufeld were
wrong! Amazing, but true.

I have copied real floppies to new .ATR images using APE's included sector copier, but when I read the resulting images the sectors are all blank! Write caching on the PC is turned on per the manual's instructions, and everything else seems to work perfectly.

This is a major bummer! The only reason I set up APE was to archive my many floppies' worth of development work for safekeeping. Has anyone else had this problem? How did you correct it?

P.S. DYN that the APE_WARP image uses my boot menu? It was quite a kick to see that when I booted APE for the first time!

You took my comment too literal. I meant a REAL Atari computer not an emulator. And speaking of variance between color TV's and monitors, I have owned the game for 16 years and can't even count the number of TV's and monitors AND Atari computers I have played and seen the game on, and in almost every case, it's some shade of blue. Of course on a couple of set/monitors there were some funny purple tones, but NEVER were the shields green on anything except the emulator.

And finally, don't take my word for it, the following is from the Star Raiders manual:

S-Shields

The shields protect your starship. When they are activated there will be a bluish tint to space. .....

Nuff said...

>>On a real Atari computer the force field is blue.
>
>Uh, a REAL Atari8 NEVER came complete with a monitor.

Well, I was comparing a real Atari computer with the emulator, in the emu it's green, on the machine it's a shade of blue. Doesn't matter what TV/monitor you have, green is green and bluish is bluish. Unless of course your green gun is gone then everything is purple.

>Tint, contrast,
>color, etc al are in quite a variance between different color TVs and
>monitors, especially of that era. Try to keep that in mind. I'm sure
>one of those colors is the "right" one but looks do vary.
>
> Cheers,

Well, I could tell you that I've owned the game for 16 years and can't count how many tv/monitors and 8 bit machines I've played and seen the game on and that in basically every case the shields were some shade of blue (there were a couple of funny purple ones).

Instead I'll go right to the source for the definitve answer, The Star Raiders Manual:

```
--------
S- Shields
The shields protect your starship. When they are activated there will
be a bluish tint to space. ......
--------
```

So I'll restate my original post - "On a real Atari computer the force field is bluish, and if it's not then take you tv/monitor in for service."

For sure, as this sometimes happened to me with my 1541! :-(And the various Compute!'s Gazette issues were inconsistent with how the bug actually operated, even to the point of contradicting articles in certain previous issues. But as was/is the nature of the bug, somtimes happened, sometimes didn't. When I dscovered this was a bug in the 1541, I made a habit of scratching the file on disk first, then saving the program in memory to disk under the same name as the file that I had just scratched.

Tim Irvin (ziggy29@netgate.net) wrote:

<re: browsing and stuff on an XE>

I've considered writing an 8-bit web browser. (Too bad the HTML spec. and
all of those damned add-ons that Netscape and IE add make a `final' version
pretty impossible. :))

What >I< imagined was:

(1) Load terminal (IceT, FT80, whatever... wouldn't matter)
(2) Dial into shell
(3) Login
(4) Quit terminal
(5) Load "XL Scape" ;)
(6) Browse!
(7) When done, quit browser, load terminal, logout/etc.

What the web browser would do is run a Unix program! :)

The Unix program would in turn do all of the network stuff (even maybe just
run "Lynx"... it's not a bad back-end to pull Web files off the net! See
http://zippy.sonoma.edu/kendrick/webfx/ <-- you'll need a graphical browser
or lots of patience :))

I had even considered having a number of OTHER Unix programs which the Web
Browser would "call" which would do things like download a graphic and
shrink and convert it into something usable by the Atari! (4 or 16 greys,
"320"x160 or less, etc.)

I'm actually STILL interested in doing this... anyone want to help out?
I kinda need a better modem setup than 2400 bps on my Atari, though. >:^(

> pressed since im obviously not fast enough to catch just one column being
> probed?
```

I'm thinking this works in a two way / two steps procedure:
F.e. row as input, col as output.
all col are set to low level
if a low signal reaches an input in a row, row is switched as output,
col as input and a high signal is sent to the special row. So it gets a
High signal on the signifcant col - the cross is found.
This is the way, a lot of Matix-keyboard-controllers work. I think the
procedure of the pokey must be similar ...

```
> I only have a schematic for the 800xl, do the 130xe and 1200xl units

Cross-posted to: rec.games.video.classic,comp.sys.atari.8bit,comp.sys.sinclair,rec.games.vectrex,rec.games.video.marketplace

There is now a new Web site available for placing your classic computing goods for sale, or for posting wanted ads or for placing goods for auction.

It's still very much under construction but there are already some goods being offered for sale on it. At present, only the Atari 8-bit and Commodore 16/Plus 4 sections are up and running.

If you want to reduce the amount of bandwidth being taken up on the newsgroups with auction and for sale lists, then feel free to add your items to the Classic Exchange.

The URL of the new site is:

http://homepages.enterprise.net/starwars

If you have any questions then please e-mail me.

Regards,
David Wyn Davies

Greetings fellow Atarians!
During a recent move, an unfortunate accident befell my good ol' 800. In the inherent chaos that inevitably comes when moving all of one's possessions, someone (no it was not me) spilled soda into the keyboard of the 800. The good news is, after enough time had passed to allow the unit to dry out thoroughly, it works fine. The bad news is, several keys are of course sticking. They are not stuck down, so fortunately the unit can still be used for most game playing and other nonserious things, which is about 90 percent of what it is used for anyway. My question is, is there any practical way to clean the keyboard out, or should I just junk it? I have another 800 that I can theoretically swap keyboards with once I find some instructions on how to disassemble the unit, but I'd much rather fix this one if there is a way. Any suggestions are greatly appreciated.

>Has anyone got any information of Atari history?
>Like dates that models were introduced and any info on general Atari
>history

Here's a short timeline. Some of the dates may be slightly off.

1972 -- Nolan Bushnell founds Atari, produces Pong arcade machine.
1976 -- Bushnell sells Atari to Warner.
1977 -- Atari produces the "Video Computer System" (or VCS, also known as
the 2600)
1979 -- 400 and 800 computers are produced.
1982 -- Atari produces the 1200XL, a machine plagued with problems.
The 5200 game system is also released.
1983 -- 600XL and 800XL produced, these fixed problems with the 1200XL.
1400XL and 1450XLD also produced, but never really released.
1984 -- Videogame market crashes, Atari suffers record losses, Warner
sells Videogame and computer division to Jack Tramiel, but keeps
the arcade division. 5200 is discontinued. Atari shows the 7800
game system, but shelves it in light of the crash.
1985 -- Atari releases the 65XE and 130XE, and the 520ST (and 260ST in Europe)
also showed a 130ST, but never released it.
1986 -- 1040ST released.
1987 -- STfm released, XE game system, a repackaged XE with
light gun, and pastel buttons, also repackages the 2600 as the 2600
Jr. and finally releases the 7800.

1989 -- The Lynx, aquired from Epyx, is released. 8-bit discontinued?
1990 -- The STe is released.
1991 -- TT is released
1992 -- The Falcon is released.
1993 -- The Jaguar is released in certain markets.
1994 -- Jaguar is shipped nationwide, computer line is dumped.
1996 -- Tramiels sell Atari to JTS, Time-Warner sells arcade division to
Williams. Pretty much the end of Atari.

>would buy it to *use*. Get a hint.
>

HELLOOooo. Can't you see the irony in your answers to my point.
What I said was would "YOU ?".. PAY! for a portable machine based on 78/79 technology when you can 'TODAY', buy a portable/palmtop with CD and Hard Drives etc. C'mon the slowest portables are hundreds of times FASTER! Get a grip on reality. FOOL!

The answer is:
Get a PC with 200Mhz and run ANY of the decent emulators of atari hardware faster than the genuine machines!!

>> Atari's past record with retail outlets and chains made sure that
>anything
>> they released would not recieve support from developers and public
alike.
>> They 'announced' to soon then proceeded to deliver very late, by that
>time
>> competitors such as nintendo and sony et al had newer
>> more powerful hardware for sale...

>Nintendo and Sony delivered more powerful hardware before atari could?
You
>sound like you're new to the game market.
>Jag hit the shelves about 2 years before Sony put out a game system.
> And longer before Nintendo >put out theirs.

>
Uh Huh, and what kind of response did Atari get from the developers?
they 'knew' about Sony et al. and abandoned Atari because of their
PAST-RECORD!!! ie ATARI wanted complete and absolute control of the terms
and conditions for releasing CARTRIDGES, and ('back then') "MAYBE?" a CD
drive? For a developer there were too many 'UNKNOWN' (RISKY) choices to be
made. My point 'IS', their past record for 3rd-party-support was dismal.

>You don't sound very knowledgeable about the stuff you're ranting about.
>
Really? And who are you to know?

Me thinks you're sore head can't take the reality of the industry? CASH!
BOZO.

Are you sure that DOS 2D ONLY worked with double density?
That sure doesn't sound right.You'd have to use tapes to transfer files between
DOS 2S and 2D.
You ARE right about the 815 not supporting single density.I wonder if the first
three sectors of a 815 disk are 128-byte like on single/double density drives.

>Does he have an internet e-mail address?

The bus type really doesn't matter at these low speeds.
Plus both the BlackBox and the PC's ACA (Asynchronous Comunications Adaptor)
use single byte access (POKEs and PEEKs),not block transfers (DMA).
The Atari IDE interface gets over 50k a second with single byte PUTs/GETs.
My floppy drive goes at 53200bps on the SIO port.So 19000bps isn't really
pushing any limit.That's how fast a normal Atari drive goes.(19200bps)
I'm sure even the .8Mcps TRS-80 Color Computer could keep up at 19200.
That is,if it had any kind of interface port to plug anything into.
(I guess you'd have to use the cartridge port)

Well I've ranted long enough.I just get iritated when people think that a
measly 1900 bytes per second on the Atari is some kind of miracle.
Like the Atari is some slow machine even though it runs faster than any other
computer.
(except the PC,of course.But it needs the speed to keep up with it's primitive
graphics capability)

(of course Apple got smart and got the 4Mcps R65C02 chip,to keep up with it's
primitive graphics chips)

Why wouldn't he be able to get a UU-encoded file?
Do some mail readers not handle big files or something.Surely this wouldn't affect a "download" command,would it?
(since it would just copy data from the mail file to the RS232 port and not from a buffer)
He can get YAU to decode the files from the Atari archive (check the FAQ).

Yes, they changed hands a while back. A company called Anglo Corporation
bought them out. They've changed hands again just last month after
they went bust. Their distribution arm (SDL) owe me money from a
cancelled order for Goldtar 16-Speed CD-ROM drives. Now, after being
bought out again, the credit I had on their system is no longer valid
so they are not exactly my favourite supplier at the moment ...

I realize that this might be a little off the subject, but...

I am looking for the name of an Atari 8 bit game that I saw a couple of times many years ago. The game was a top down shooter, you were in a space ship and were shooting at various bad guys. The thing to note about this game was that there were satelites that had "rays" that connected each of the satelites. This was on a grid and the "rays" were at 90 degrees to each other. I seem to remember that one of your goals was to shoot these satelites and get rid of the rays (I may be wrong about this though). If you have any ideas as to what this game was called please respond to this plea.

Thanks, Andrew.

Source record: 72776

This is an 800 not an 800XL?

If the old 800 get a can of Cleaner Degreaser from Radio Shack cat no 64-4322. Remove the key top that is sticking, spray in the cleaner while the machine is off..work it up and down until it is free let dry check and re-clean if necessary.

The key contacts in this unit are brass when pressed down they are bent in a fashion that lets the contacts connect, no marlar like in the 800XL's to destroy..

The 8bit Atari uses mid 70 technology, And I remember that 300bps was the mainstreem, 1200 bauds modems ranged in the 6oo.oo . ICD's MIO hit the market in the mid 80's and still 9600 baud modems where just an idea.. So getting my Mid 70's Mainframe to do Flow controll at 19.2 is impressive.

8Bit Lan mainframe:

Master: 512k, Mux, 660 meg scsi hd Host
Slave #1 1088k XL, Mux, MIO 160 meg Local BBS node #1
Slave #2 512k XL , Mux MIO 80meg Local BBS node #2

There not to many Atari users with a system this big, and its even getting bigger.

bit later) was in screen size. Guess what: people are buying palmtops.
>
Yeah, sorry I was a bit harsh on the portfolio. I've had about 3 with all
the accessories etc.

The one fault it had was, that the keyboard didn't conform to normal
scan-codes and the vector $09 had to be diverted to put out more standard
codes. Anyway, and this is my point. Some commercial software fell over
when trying to hijack vector 9, instead of leaving the vector redirection
in place and getting standard codes out of it.
I did manage to get WordPerfect running without too many problems, that
was a great boost in productivity personally.

Once again SORRY to DIP Ltd, and ATARI who took a chance at gaining a
foot-hold on an upcoming market. Yes, I also like the HP95. I would have
liked a Psion MC600 (very expensive at the time, now very scarce).

> As for pinouts all I have right now is the one for the Tandy RGB, though
>I am not sure this will do any good.

You're right it won't! Atari's only produce composite video, you might be
able to extract RGB from the component-video but the picture quality would
be dire. That is because composite video is bandwidth limited.
(Compressed).
Your only other course of action is to get a monitor with a CVB input, I
know that Commodore monitors have one, as for any others I'm not clear.

The connector is a standard phono type.

Atari pins 2 - GND
4 - Comp Video
3 - Audio

extra outputs (not entirely useful)
1 - Comp Luminance (b/w)
5 - Comp Chroma (extract RGB from this if you
dare!)

Why bother "extracting RGB"? Why not do the sensible thing and use the split Luma/Chroma signal as one far superior to composite? I'd say that's squarely in the "useful" category.

From: rsg0910@iglou.com
Message-ID: <EArEJ6.4qu@iglou.com>
Source record: 72794

I came across, at a fleamarket, a manual titled "Computer Software Protection and Code Breaking" by Linda Gardner. There's an address in back with a distribution address of Gardner Computing Inc., PO Box 388, Holbrook, NY 11741. Are they still around? The table of contents tells of how to copyprotect your disks via bad sectors, double sectors, that sort of thing. There's also chapters on cartridges and cassettes. It also came with a disk that contain the software to show how it was done, but the software I guess was long lost by the dealer (50 cents - cheap stuff).

I believe this came out around 1983. Anyone have more info on this?

Hello Atari fans,
I know this is supposed to be a newsgroup for 8-bit Atari micros, but I figured all of you won't mind a non-topic post! I'll keep it short.

-I'm here letting you know about the Atari Preservation Society. The APS is a group of Atari fans trying to keep the Atari Experience alive into the next millinium!

-The APS has only been around for about four months and already has 200+ members, including Telegames, a Jag/Lynx game developer!

-If you'd like to find out more about the APS, or become a member, make sure to visit the Official web site at:
http://www.geocities.com/SiliconValley/Vista/1863/main.html

Megabyte,
Official APS Member!

-The Atari Preservation Society; We're Keeping The Atari Experience Alive!

It's not so difficult, so please use the atr-format(til there is
something better) - here is the meanig of the 16 byte header:
----------snip----------:
Subject: Re: function of the atr-file header

>the ATR-files.
>
>Thanks Matt

Well, here's the structure from it, taken out of ACE
(the Atari Computer Emulator)

struct sio2pc_image_hdr {
byte code_lo, code_hi; /* ID code = 0x0296 */
byte size_b1, size_b2; /* low 16-bits of size */
byte secsize_lo, secsize_hi; /* sectors size: 128/256 */
byte size_b3, size_b4; /* high 16-bits of size
(paragraphs) */
byte resv[6]; /* reserved */
byte numerr_hi, numerr_lo; /* number of sectors with errors
*/
};

struct errormap {
byte sec_lo, sec_hi; /* sector with error */
byte cstat; /* communication status */
```

```
byte hstat; /* hardware status */
byte resv[4]; /* reserved */
};
```

Note that the size (which is stored in size_b1 through size_b4)
is in paragraphs, or multiples of 16. Thus, take the total number
of sectors, multiply by the sector size, and divide by 16, then store
this result across those four bytes.
(Actually, I might have added bytes 3 and 4 to it.... or someone
else might have already. I can't remember now)

Note that the errormap was an extension I added, but I'd like
to see it get standardized, since they're useful for some disks.

Basically, the errormap sits at the end of the data, and 'numerr'
specifies the number of error records. Each one tells what
sector should give an error when reading it, along with the
codes that should be given for the error. The reserved part
could be used to add other information for really strange
errors. (but make sure you publish the extensions, if you
add any!)

I hope this helps some.

- Frank

Well, you -can- use the Atari 8-bits with Amiga RGB monitors such as the
1080-1084 series... They have multiple inputs/modes that you can select on
the back and with the cable I bought from Toad Computers, my 800XL is very
happy on an Amiga 1080 monitor... Picture is pretty sharp too...Another
added advantage is that you can hook a VCR up to it at the same time and
get cable as well... Thats what I did in my son's room-he loves it! :)

Help! My 850 won't communicate with a modem at more than 4800 any more. I used to be able to use 9600 when calling Genie last year, but it suddenly quit about six months ago. At first I thought it was the modem, but testing it with others confirms the 850 is the trouble. Any suggestions for a repair? I have another 850, but its brains were addled by a lightning strike through the phone line last year. Any chance the guilty component in the one I'm using now would be ok in the addled one?

Enquiring minds want to know.

->Are you sure that DOS 2D ONLY worked with double density?
->That sure doesn't sound right.

You're right -- it's wrong! I have Atari Dos 2.0D and
it's flexible like all the other double-density compatible DOSes.
It works on other brands and models of disk drives, it can be
loaded in either SD or DD, and it can handle drives of a multi-
drive system being in different densities at the same time.

I've never seen any difference between Atari Dos 2.0D and its
much more common cousin 2.0s, except of course that it works in
double density and has a density-change option on its menu.

A note of explanation about the reference above to a DD Dos
being "in" SD (single density): By using Atari Dos 2.0D to write
the Dos files onto a SD-formatted disk, the result is a Dos master
disk "in" SD. The program works either way (like other DD-compa-
tible DOSes). But of course, to operate in double density one has
to have a double-density-capable disk drive.

http://CloserToHome.dyn.ml.org (Web page)
ftp://CloserToHome.dyn.ml.org/ftp (For web browsers)
ftp.CloserToHome.dyn.ml.org (For ftp clients)

I've gotten most of the configuration problems worked out. The site should be up most of the time now.

I've also noticed a few ie and netscape users are having trouble getting into my ftp site. What I see in the log is that they are trying to get into "/pub/atari_8bit", which does not exist. You will never get connected to it if you try to connect to a directory that does not exist. Just click on the URL that is in this message ("For web browsers"). Or if your news reader doesn
't support that, copy and past it into your browser. If the ftp server is up, you will get connected.

If your web browser supports java, visit the CTH chat room and message bases. Both can be accessed from the main web page. I'm working on making the message bases accessible to non-java users. This will be great for actual a8 users that are using lynx.

>any ideas.

I once read in an Atari Explorer that a good way to fix the XE keyboard was to retrace all of the circuit paths with conductive paint, since the keyboard's circuit was not made well. Originally I thought that it was really cheesy to make a keyboard with two plastic layers and conductive paint instead of a nice switch for each key (like the 800, 800XL), but most keyboards today use the plastic/paint method. (Of course, most keyboards today are not mounted on top of the motherboard either.)

The King is dead. Long live the King.

Henry.

4650. Zeppelin ATR wanted

Newsgroup: comp.sys.atari.8bit
Date: 1997-05-27 00:00:00 UTC

Message-ID: <338A8A12.615B3B65@lin.foa.se>
Source record: 72818

Anyone out there with the 8-bit game Zeppelin? You are flying a zeppelin in a cave, shooting at switches in the walls to open and close different gates. Searching for some TNT and then blow something up.

I also search for the Mountain King.

If anyone can tell me what I'm doing wrong when trying to load Boalder Dash, it would make my day. Probably I need to know the name of the first cave.

It's one of the games I liked best. I have no ATARI anymore, so I need the game in ATR-format

Jan Gustavsson

hi folks... i had the time to update my homepage:

http://iraul1.ira.uka.de/~s_tomczy/heaven.html

containing usefull (?) stuff for coders:

- "unillegal" opcode-list
- ANTIC-opcode
- GTIA-Modes description (mode9,10,11,9+,9++)

and other crap informations...

at the moment there is no grafix or links avaible because
netscape changed the symbolic-links to diskdrive a: :((((i love m$ (;))

bye heaven/TQA

I did write snapshot. The program works with machines with more than 64k.
Plus the sound utility that plays wave files on the 8bit. It automatically
configures itself to use anything from 64k to 1088k.

--
http://CloserToHome.dyn.ml.org (Web page)
ftp://CloserToHome.dyn.ml.org/ftp (For web browsers)
ftp.CloserToHome.dyn.ml.org (For ftp clients)

I've gotten most of the configuration problems worked out. The site should be up most of the time now.

I've also noticed a few ie and netscape users are having trouble getting into my ftp site. What I see in the log is that they are trying to get into "/pub/atari_8bit", which does not exist. You will never get connected to it if you try to connect to a directory that does not exist. Just click on the URL that is in this message ("For web browsers"). Or if your news reader doesn
't support that, copy and past it into your browser. If the ftp server is up, you will get connected.

If your web browser supports java, visit the CTH chat room and message bases. Both can be accessed from the main web page. I'm working on making the message bases accessible to non-java users. This will be great for actual a8 users that are using lynx.

Well, I will ask the easy one:

Do you have 128K or more on that machine? If you don't and
you aren't using Ice-T 1.x that could be your problem.
Ice-T 2.72 works great for me. It drops characters at 19.2
with my MIO, but I suspect that's the MIO and not Ice-T. I'd
like to get Len Spencer's R: Handler and see if it makes
the difference.

If that's not the problem, I can't tell you what could be wrong.

Selling off game stuff taking up space. Lot's to choose from, there
is an asking price, however I am open to large quantity offerss.

I really want a Sega Saturn (Japanese white model), and I am willing to
trade this stuff for one......

Here goes:

ATARI 8-BIT STUFF:

Atari XE Game System, complete in box, joystick, gun, Bug Hunt cart,
Flight Simulator cart, all manuals, excellent condition $65

Atari XF551 disc drive, all cables and hook ups $40
Atari 1050 disc drive, all cables and hook ups $25
XC12 program recorder, complete in box $12
XM301 modem, complete in box $4

Carts Complete in Box

Astro Chase $6
Frogger $6
Return of the Jedi $6
Desert Falcon $6
E.T. $6
Final Legacy $8
Donkey Kong $8
Donkey Kong Jr. $8
Jungle Hunt $8
Crossbow $8
Ball Blazer $8
Rescue on Fractalus $8
Star Raiders 2 $8
Summer Games $8
Track & Field $20
(w/controller)
Barnyard Blaster $8

Carts (loose)

Berzerk $15 (B&C Proto)
Super Cobra $15
Crossbow $5

Choplifter (Broderbund) $6
Blue Max $6
Decathalon $6
Millipede $6
Congo Bongo $6
Pengo $7

Discs Complete in Box (all $7)

Goonies
Dallas Quest
Bruce Lee
Kennedy Approach
Wargames
Beach Head 1 & 2
Raid over Moscow
LA Swat
Panther
Controller

Cassettes Complete in Box

Conversational Italian $5
Speed Reading $5

Extras:

European 7800 hand controller $10
(like Nintendo controllers)
Epyx Joystick $7

Other Stuff:

Panasonic 3DO System, cables, controller, Crash n Burn, demo disc,
and Wolfenstein 3-D $60

Jaguar, console only $15

Sega Genesis console only $20

Sega Genesis +Sega CD $40

Sega & SNES Dual copier unit $offers (no power supply)

I will consider quantity discount/buyout options, plus trades for:

Sega Saturn system

Montezumas Revenge and Rambo II:First Blood for the Sega Master System

e-mail all offers, buyer is responsible for shipping.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 800XE, 65XE, 130XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

Although no emulators are perfect, the best of the lot, IMHO, is XL-It
0.20. There are also other emulators out there. Emulators, Inc.
produces PC Xformer 3.6. Chris Lam has one called Rainbow '95. There are
others that stopped development at early stages, and a few that are made
for other platforms such as Unix and Mac. All rely on disk image files,
of which there are a few standards. Most are produced by using so-called
peripheral emulators, such as SIO2PC and A.P.E., which you should also
consider having. But these require a cable to be built.

All of these products are available via the Web or ftp. I just don't have
the URLs handy at this time.

Emvince,
Absolutely! There are a few... XL-It, Rainbow XL, PC Xformer. They are all good. One may work better at a particular task than another, so loacte all of them, try them all out and decide for yourself. Check the Atari FAQ for more details. There is an emulator FAQ at Bill Kendrick's page: http://zippy.sonoma.edu/kendrick. Most of the emulators are available at gopher://gopher.archive.umich.edu:7055/11/atari/8bit/emulators. Hope this helps.

Kurt,
Check your S registers for you modem. You mah have something set a bit off. You shouln't be losing any characters. I don't and I have mine set for 19200 on a 14.400bps modem (Not with Ice-T though) using Bobterm.

Yes!!! There are a few Emulators, and even one VERY good one: XL-it. Latest
version is 0.20 and downloadable from:

http://myst.slcc.edu/~markus/

I'm very excited about this emulator. I hope you are having as much fun
with it, as I do.

I agree with Casper. I also say that this is probably the wrong
newsgroup to be posting to. I thought it was an AS/400 related site -
what a let down.

I found my monitor cable last night in the closet of death and just for kicks, hooked up the ol' XF551 drive. Well, it wasn't broken after all! (Apparently I for some reason had fiddled with the drive number switches long ago.. it's actually kind of embarrassing..heh.)

I've got a 120MB drive laying around... has anyone built the IDE interface designed by Konrad Kokoszkiewicz?

Ok I have an Atari 800 set up along side a c64 and an Apple //e
having done some research I have found that there are a few busnesses
supporting Apple][s and Commodore 8 bits
so Are there any busnesses left supporting Atari 8 bits or did
EAs going out of there way to buy up all the Atari support companys
trash that....

Atari items for sale. I'll pay shipping and handling costs but NOT the C.O.D. charge. If you don't believe the prices are fair I am willing to listen to your offer. Enjoy!

1) The Hitchhiker's Guide to the Galaxy --Infocom text game. Original box and manuals. Check it
out the props are still in the box! Price $5

2) Flight Simulator II --subLogic flight simulator. Original box and manuals. Including the navigation maps. Price $15

3) AtariWriter and Atari Proofreader --the classic word processor and a dictionary program. Original manual including the quick reference sheet for the AtariWriter but no documentation for
the Proofreader and no box. Price $25

4) Movie Maker --an animation construction set by Electronic Arts. Original manual and box. Price $10

5) 5"1/4" Disk Organizer with disks! --a grab bag of software everything from Antic Magazine
disks to games like Mail Order Monster and Summer Games both classic 80's computer games. Price $25

6) Atari 1010 Cassette drive --not sure if it works but power supply and light seem to work. Also
included is the data cable and a conversational French program. Has sound and original box and
manual. If anything this is the first multimedia device for the Atari! Price $10

7)Atari 1027 Daisy Wheel printer --not sure if it works but power supply and light seem to work.
Also included is the data cable. Price $10

That's why I still use an original IBM AT keyboard (with my 5x86-133 and Windows 95)... I hate keyboards that I can literally wear out within a year (or break just by holding on to the ends and twisting)... Also it's getting hard to find new keyboards that are not "ergonomic" or split into 2 sections of keys turned at angles... I don't see how anyone (even a 90 WPM touch-typist) could ever stand to use these things...

For the record the only Atari keyboards I've ever used are 400 (yech!), 800 (would be OK except half the keys stick) and 800XL (my keyboard of choice)...

> magically gone public domain?

There's a difference between copying software that has been commercially unavailable for 5 to 10 years, much of which was produced by companies that no longer even exist (or in some cases no longer care), and copying Super Nintendo and/or Sega Genesis ROM images of cartridges which are still being marketed in stores all over the world (well, all over my part of the world, anyway.. Southeastern USA)... With the Atari 8-bit stuff, the user has two choices: get the software from Yogi's site (or wherever.. "pirate" it anyway) or not get the software at all. None of the companies that produced the software, nor the authors of the software, are losing money from this sort of thing, since they no longer sell this software (when's the last time you went to CompUSA or MicroCenter and asked where the Atari 800XL games section was?)

The console warez guys are in the business of pirating software that, for the most part, can still be found at many retailers, and in some cases is still in production (Does Sega still manufacture Genesis carts?)

Both activities are, of course, illegal... but then in most states it's illegal to pull your car into an intersection on a green light during rush hour and wait for it to turn red (thereby blocking traffic, but allowing you to make an otherwise-impossible left hand turn)... most police turn a blind eye to this sort of thing, and concentrate on catching drunk and reckless drivers (OK, so I'm not so great at analogies...)

What I'm saying is that most of the console guys have the choice not to break the law, and choose to do it anyway...

When I saw this I thought there would be something related (even remotely) to the Atari 8-bit. Looks like Art to me. Obviously not of interest from this point of view. Looks nice, but where's the 8-bit relation?

Not entirely correct. There was a version that behaved as you stated, I got
a copy of it with the MMG compiler. But on one of my trips into the silly
con valley surplus shops I found a bunch of disks labeled ~Atari 815 Disk
Operating System. It had a version of Atari double density DOS that was
density smart.

: >Jeff

: HUH?

Electronic Artists at one point tried to activly kill Atari
by buying up all the 8 bit software makers...
They were of the opinion that it was time 8 bit boxes die..
However they did not go after anyone supporting any 8 bit other
than Atari...

Eventialy they started buying up companys that made ST software
that's when it was make clear the 8 bit statment was lipservice
they were out to kill Atari...

EA so drained there own funds they ended up selling companys they
bought...

I'm asking if there was any companys that made 8 bit atari software
/hardware that survived EAs buying spree...

and from what I have gotten there are a lot of Atari support companys

They could have at least used the correct spelling for St. Louis
(instead of St. Luis). They were referring to the city in Missouri (I
saw the picture of the Gateway Arch), not some other person/place/thing.

Casper, your opinion, shall we say, is generous compared to mine. I'll
leave it at that.

No Atari, Apple, Commodore, DEC, Handheld, HP, etc. stuff (actually not any computer stuff) to be found there what so ever, just a bunch of pictures of 'the outside' (augh! the light, no computers! no net! I'm melting....)

The buttons were hard to understand I assumed incorrectly uou click on the blue thingis below the names to go to different pages, wrong. Also takes forever to view if you have a 14.4k modem.

Post back here to us when you get some good computer shots, ok.

I am giving away my Atari 800. It is in working order and includes
all original H/W, manuals. Includes modem, floppy drive, joysticks,
many game cartridges, S/W library, technical references, magazines,
other stuff.

The catches are:
1) You pick it up - I live in Redondo Beach, CA
2) You take everything or nothing
3) You convince me that you are going to use it, not sell it.

Thanks for the clarification! Now I'm beginning to understand how software that I thought was produced by others was later marketed under the EA name. That little piece of Atari history somehow escaped me and others who should have known about it.

Good luck in your quest.

Randy,

Thanks for "straightening us out" with your attitude that this is the appropriate group for your post.

First off, nobody in this group would have flamed you.

Second off, rec.games.video.classic is where 99% of all 2600 activity is.

Hi Sidney!
Yes you do have the same tv system as Germany.
But!.. The sound frequencies are allocated by the authorities of the
particular country intended for reception.

Here in the U.K Sound is transmitted '6.5Mhz above' the VISION frequency.

In the Netherlands, Sound is at 5.5Mhz above the vision frequency. Just a
tad too low!
Plus FM SOUND isn't like AM RADIO. (if its slightly off-tuned you still
hear it.)

FM - you either hear it or you DON'T!

Maybe you could find a competent TV REPAIR MAN to adjust your ATARI's
modulator so that the spacing is 5.5Mhz rather than 6.5.

I hope this is helpful,
Richard.

>I bought it for $8 with tape drive and all books!

The Atari 800xl is an excellent computer, IMHO. Do you have all the cables setup? If so, turning it on without a cartridge (or disk, tape) will show you a blue screen and say 'Ready'. This is Atari Basic. To get into a diagnostic, type BYE. (The diagnostic is pretty self-explanatory). To run a cartridge, make sure the power is off. Then put the cartridge in the cartridge slot and turn the power on- the cartridge will then load and run. Disks are a little more complicated. I have a 1050 disk drive (there are many others). On every disk, you must put an operating system (except when told otherwise) such as Atari Dos, SpartaDos, etc. Since I have Atari Dos II, revision 2.5 (is this possible?), you would load dos from Basic (unless it already loaded) by, I think, typing DOS. Then to load a program, select "List directory" (may be different, I don't do this because I have a menu setup) select "All". This will display the different files on the disk. Then "Load" the file and off you go. Again, I am not currently at my Atari right now, so the information about Atari Dos may be inaccurate, but you get the point. Cassete Drives I'd have to look into- I have one, but no tapes for it (Frogger and The E-Factor broke).

I hoped this helped somewhat. It is by no means a complete tutorial, and I welcome anybody's comments. As for finding disk drives/disks/cartridges/joysticks/ etc... just check this newsgroup or ask somebody; there may even be an Atari users group in your area. I sure you'll find something.

Source record: 72662

Hi All

I'm selling 3 Atari 8 Bit computers

1. Atari XE Games System

This is Atari's "sort of" XE console based on the 130XE.

Comprises:

Main Unit
Keyboard
Grey CX40 Standard Joystick
Gun
Flight Simulator 2
Bug Hunt
Missile Command (built in)
Aerial Lead
Power Lead
Good condition, all works perfectly

2. Atari 600XL

Comprises just the computer itself (no aerial or power leads), but uses the same leads as the XE Games System so you could always buy the two together. Average condition, works perfectly

3. Atari 400

Comprises just the computer and aerial lead. Average condition, works perfectly

Please email any offers to marting@dircon.co.uk inc postage at cost or collect from NW Kent. The XE system is an excellent bit of 8 bit kit, nagging other half forces sale.

Martin

Greetinx fellow Atarians...

I have been playing that old 8bit game Spelunker using an emulator (finally got it working under Xlit and it looks and sounds great!) Has anyone finished this game?? It is very addictive but the joystick control is inadequate and I find myself dying in relatively routine situations, i.e. I fall off a cliff before I press the jump button.. the controls are a little jerky, but if I remember, it wasn't any better onmy 800Xl..

I think it's ironic that Electronic Arts once produced creative software, and then after buying all of these companies (this is the first I've heard of it, but have not been paying enough attention) produces only macho sports games.

"The Need for Speed II" is a far cry from "Seven Cities of Gold" and "MULE." (I understand that Ozark Softscape deserves credit for those titles, but at least EA was interested in publishing such titles). I had the opportunity to visit Electronic Arts Seattle recently and when I mentioned "Archon," I got the reply: "Huh?" Folks hadn't heard of it. I'm not going to insult the folks working for EA, but the corporate philosophy that enables this sad departure from a creative past.

If you haven't yet, be sure to check out the official and unofficial FAQs at
http://www.faqs.org/faqs/atari-8-bit/faq/ (the official one) and
http://zippy.sonoma.edu/kendrick/nbs/new_and_emu.html (the unofficial one).
The information in these sites is as least as helpful and more up-to-date
than anything you're likely to find in a book. There are also a number of
vendors who still sell Atari 8-bit hardware and software (listed at
http://www.faqs.org/faqs/atari-8-bit/vendev/). People with items to sell
or trade also post here often.

Doesn't using seperate chroma and lumna defeat artefacting?

I also heard that TRS-80 Colour Computers don't have artefacting in PAL.
Is this true for other computers?

>where just an idea.. So getting my Mid 70's Mainframe to do Flow
>controll at 19.2 is impressive.

Atari was always going at 19200 with it's disk drives from the start.
It's simply the 850 interface that's limited.

What does speed have to do with flow control?
Besides the BlackBox's automatic flow control,it won't help you to keep up with input.Obviously it's nice for uploading with Zmodem so that you don't over-flow the modem's input buffer.But it doesn't take SPEED to simply check the CTS line before sending data.At least when the line status is maped into memory like it is with the Black Box (and with the MIO,I assume).
Of course with the 850 and P:R:C,you have to disconnect from the interface so that you can send a "Get Status" command packet to it.
(can you exit concurrent mode without purging the input buffer.Of course the point is moot if the RTS/CTS flow control is built into the handler(you don't want anything but the R: handler accessing hardware(c.f. the PC)))

But I never did like the way that the 850 R: handler worked.
The baud rate is set by a index number rather than just giving the handler the FP number of the baud rate.(it could use the FP OS to convert it to a interger)

Also,different status information is returned depending on wether your in block mode or concurrent mode.Aparently,Atari never thought that a cartridge modem (like the Commies use)
interface would come along.
(or a expansion port device,which is really what the Commodore carts are)
What I mean to say is that reporting both sets of numbers (from the STATUS CIO) would better take advantage of the Atari's easy access to the line status of the Black Box's RS232 port.

The atari is capable of 160x200x30 monochrome as well as 80x200 16-level RGB.
Also 160x200 4-level RGB.

But even if you have a PC,running Lynx is better.(much faster)

Are you sure,the 815 was only supossed to support double density.Hence a
"density change" option would be useless.Maybe your version has been hacked.

>A note of explanation about the reference above to a DD Dos
>being "in" SD (single density): By using Atari Dos 2.0D to write

>to have a double-density-capable disk drive.

And then the 1050 double density drive came out and it all became confusing.
Thank you very much,Atari!
(thanks also for not coming out with a expansion card interface box like the
TI-99/4 had)

>>>>--<<<
>>>> david moeser -- censornati, ohio <<<
>>>> erasmus@one.net <<<
>>>>--<<<
>* Then there's Vapor DOS 3.14159265: triple density only! *
>(Well, actually, it's "pi" density: 402.1 bytes per sector!)

Actually,density and sector size have nothing to do with each other.
The PC uses 512 byte sectors yet they still get only 360k per disk.
The secret is to put the sectors closer together.Since the Percom/Indus drives
use 256 byte sectors,there are less inter-sector gaps and hence more room.You
could get even more room by puting them closer together.And using more than 40
tracks.But simply making the sectors bigger was the safest course for Atari.

Just look at Linux,it just uses a 8k and 4k sector per track.
(since you can't have 12k sectors)
Now that would be great for those Atari drives (like Happy) that have
a track buffer.
(which the PC drive doesn't)

Yes, it was made for the Atari. Actually, there was two made. Archon, and Archon II. IMO the original was much better.

As to where to find it, I don't know (I am new to this newsgroup). You can find in in my closet if you know where I live ;) I have the original disk and manual for both games.

In article <01bc6e21$6363eb00$5cb541ce@default>,
The Boyle's <pboyle@centuryinter.net> wrote:
>I just got one of these computers today. I would be interested in some
>cartridges and some info on how this thing works!!!!
>I bought it for $8 with tape drive and all books!

First, congratulations! You've acquired one of the landmark machines in the history of home computing; not only is it among the pantheon of "classic" systems, but in the humble opinion of this group's readership it is, of course, the BEST of the classic systems! I/we hope you will get into it and come to really appreciate and enjoy it!

Second, as to what you've actually got. What model, exactly, did you get? Did you get any peripheral devices other than "tape" (I assume you mean "cassette;" what model cassette drive?) ? Did these come with all the necessary power supplies, computer-to-peripheral I/O cables, TV-and/or-monitor connection cables, etc.? What books, exactly? State hardware model numbers (and makers, if not Atari models!) and book titles...

Third, start looking around for a disk drive or two. Cassette tape is okay to start with, but is very slow and requires you to do a lot of dreary "manual tape-positioning" work. Use it for a while -- long enough to really APPRECIATE a disk drive when you get one! -- but definitely move up to disks as soon as possible. There are several makes and models of disk drive for the Atari. Look at the "I/O" connector on your computer and become familiar with its appearance. If you ever come across a disk drive that has that SAME connector on it, it is a virtual certainty that that drive WILL work with the Atari, so snap it up immediately! :-)

Fourth, I'd recommend a modem, if you didn't already get one in your $8 purchase. Any "standard" modem up to 4800 baud can be made to work with the Atari by also acquiring an Atari-I/O-port (SIO) -to-RS232 adapter; again, there are numerous makes-and-models from Atari and many other manufacturers. There is ONE modem which can plug DIRECTLY into the Atari -- the Atari SX212 -- but THAT one requires a special software handler which is NOT built into the computer OR the modem but must itself be obtained "elsewhere" (there's almost certainly a copy somewhere on the Net, in at least one of the many Atari archives; if worst comes to worst, I have a copy myself that I could send you). You'll also need terminal-emulation software, probably with some form of file-transfer capabilities (so that you can continue to download new (to you) software); I personally recommend Kermit65 if you want to use Kermit file-transfer protocol, and BobTerm if you want to use any of the Xmodem family of protocols.

The above will get you SET UP to the point where you can use the system without having to spend most of your energy making things WORK -- i.e., doing all that boring cassette-tape-positioning I mentioned. After that, it depends on what you want to do! Play games? Learn to program? Balance your checkbook? Those things require software, some of which you may have acquired in your purchase, some which is available for download from the Net and elsewhere, and that which you may write YOURSELF once you know the Atari well enough to proceed.

And of course, the Net, the Web, and this newsfeed will be an invaluable resource to you as you go along -- you can probably acquire the disk drive, modem and interface, terminal-emulator and modem-driver (if needed) software, etc., either here or through someone you meet here after asking for help... It's amazing in here and you are more than welcome. We need all the Atarians we can get! :-)

That's really sad when EA employees don't know Archon a classic EA game.
I guess they are simply PC programmers now and stick to Sports games
because that is where all the money is. (Along with DOOM style
maze/fighting games)

5. SEMINARS
6. OTHER ACTIVITIES
7. GENERAL RULES AT THE SHOW
8. WHY SHOULD I ATTEND NAS?
9. HOW YOU CAN FIND OUT MORE
----------------------------------------------------------------------

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together
which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we arrange the show for the
third straight year we hope to fulfill everyone's expectations and that
this will result in the best possible atmosphere. We've gotten a certain
amount of criticism, both positive and negative, from those who have
attended the shows in '95 and '96. We've taken heed of the suggestions
made and we're once again off and running!

1 - WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday,
June 15. This is the weekend following the beginning of the summer school
holidays as well as the weekend prior to the Swedish Midsummer
celebrations. We'll open at 12 p.m. on Friday and close at 6 p.m. on
Sunday.
```

NAS97 will be held at a school called LUNDBY GYMNASIUM at HISINGEN,
GOTHENBURG. Hisingen is a large island very close to the main parts of
Gothenburg. There are a lot of local transportations there.

A map for the route description can be found at www.tripnet.se/sak/nas

GOING BY TRAIN
The train arrives at Centralstationen. Take tram 2 (destination
Biskopsgarden) at Nordstaden and get off at the stop Rambergsvallen.
Signs will lead your way to LUNDBY GYMNASIUM.

GOING BY BOAT
Boats arrive near the tram stop Masthuggstorget. Take tram 3, 4 or 9 to
Brunnsparken, then change to tram 2 (destination Biskopsgarden) or 5
(destination Lansmansgarden) and stop at Rambergsvallen. Signs will lead
your way.

GOING BY PLANE
Take the airport bus to Centralstationen. Follow the instructions as under
"going by train".

GOING BY CAR
Please have a look at the map, LUNDBY GYMNASIUM is nearby a large road
and should not be hard to find.

2 - WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the
Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 150:- (about UKP 12,75)
* Single Entry ..... SEK 80:-

These prices include full access to all the activities being held during
NAS97.

3 - EXHIBITION

The exhibition hall is open:
Friday 12-18, Saturday 11-20 and Sunday 11-18.

At the exhibition you can see:

DISK1 (Sweden)
Will be showing Jaguar games and other fun stuff for Atari.

Daggskimmer/Tom Thomason (Sweden)
Bo Leuf and Tom Thomason will be demonstrating Papyrus, Interface and other
shareware products. Tom will also be handling registrations for those.

Peter Segerdahl
One of the authors of Zero-X, the fantastic sample editing program,
shows how to use Zero-X the best way.

Thorsten Butschke (Germany)
As last year, Thorsten is here and showing and taking registrations for

shareware products and the magazine Atari Computing.

16/32 systems (England)
Nic Harlow has always been at NAS, so why any different this year?
He's showing CD:s for Atari, games and more.

Line Audio
Roger J?nsson shows the different JAM products and more for the musican.

SAK and SAK/Skane
The Swedish Atari Users' Association and the local department in Skane are here too, to show different programs and computer systems in action. SAK will sell T-shirts, PD-disks, have a soldering corner and a swap meeting too for those who whises to sell, buy or trade single items of interest.

4 - HACKER CONVENTION

Demogroups and other programmers can gather for competitions and swap demos and all kinds of code. NoCrew is the Swedish demo group who will see to it that everybody takes part and enjoy themselves. Those of you hungry after rewards in the form of prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

These are the competitions:
Wild compo
Unlimited demo compo

More detailed information will be sent out to all demogroups by NoCrew. You can also make contact directly to them at their homepage at www.nocrew.pp.se

5 - SEMINARS

Last years seminars were very much appreciated, something of which we naturally have taken notice.

The SEMINARS will be held from 12 p.m. on Saturday and hopefully some of them even on Friday or Sunday. But - please attend on Saturday if you don't want to miss any of them.

- Peter Rottengatter
- About STiNG and Internet
Peter is the author of STiNG (the follow-up to STiK), and he will talk about installation and practical use of this program, plus some general talk about Internet and software for Atari.

- Martin Graiter
- Hardware seminar
Martin is a hardware specialist with long practical experience repairing and servicing Atari computers.

- Mille Babic
- HTML and Internet access

Mille will talk about HTML, and show how this cryptical language
really works. He also gives a lesson about going through the net,
practically, with you Atari.

- Claes Holmerup
- The hardware behind digital recording
Claes was here last year also, and talked about digital mastering.
Now he shows a bit more about all that hardware that's required
to make a digital recordning. Claes will also show how CD burning
can be done with an Atari computer.

- Rolf Johansson
- Layout with Calamus SL
What is Calamus SL, and how can one use it? Rolf shows how the
club magazine is done, special functions and regulars in
the software plus a bit about the new version SL96.

- Ulf Hogberg, Rolf Johansson and others
- General Atari Questions
We will also have a little "chat" seminar where you can ask questions
about everything - and we'll try to answer them. Maybe this also
can become some form of a debate, we don't know right now. Please
attend, as we might need you help.

6 - MORE ACTIVITIES

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated
contest last year), hard disk throwing (this year it WILL happen!),
network games, juggling, etc. Everything depends on our finding
volunteers to act as game leaders and referees. There will be prizes
for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips,
etc. We CAN arrange quantity discounts at the local pizzeria, and
will take orders for this.

* Internet cafe, with possibilities to surf on the Internet, chat,
telnet or whatever that is legal. The cafe will be nearby the
"normal" cafe, or refreshment stand as written above.

7 - GENERAL RULES AT THE SHOW

* No smoking inside the building or by windows and doors.

* No alcohol, beer or anything like drugs will be tolerated inside
the show. Please have fun with that outside in the city, but not
at NAS97. All such things found will be confiscated.

* Keep a good attitude against other people and show your tickets
to the staff if asked for it.

Anyone breaking these rules or acting violently will be thrown
out of the show.

8 - WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

9 - HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (e-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an e-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your e-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet.se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is:
+46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everything there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile phone on
+46 70-669 52 35.

KEEP THE TOS PLATFORM ALIVE.
WE ARE LOOKING FORWARD TO SEE YOU AT THE NORDIC ATARI SHOW 1997!

I'm surprised to hear that Electronic Arts does *any* inhouse development
anymore. Years ago they became distributors and they were in the process
of phasing out development. They distribute games for small development
houses like Bullfrog and a few others.

I will have to call a friend of mine at EA and verify what the correct info
is :-)

Fernando

John,

Yes.....and yes,

I know a salvage place in Santa Clara with the PC mount I/O
connectors. As for serial I/O cables, I still have about 1000 sitting
in my garage.

4764. Atari material for sale

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-03 00:00:00 UTC
From: Alan Christie <94chrisv@scar.utoronto.ca>
Message-ID: <Pine.GSO.3.95.970603145401.15558H-100000@fissure.scar>
Source record: 72599

Here's a detailed list of the computer books (90% Atari 8bit) I have for
sale

But first, the original software..

B/Graph with Enhancement disks from Antic plus original spiral bound docs
$15

Sentinel One
Stellar Shuttle
$2 each (sorry no docs, no nothing with these two)

Lode Runner C64 version one side, Atari 8 bit (48k) version on other
with original box
$5 SOLD!!!

Dos 2.5 original disk with spiral bound docs
$5

Dos XE : original disk with spiral bound original docs
$5

original docs for Cartridge Demon Attack
$1

Now for books, magazines..

The following are original spiral bound...
COMPUTE 1st Book of Atari, (c) 1981 $10
COMPUTE 2nd Book of Atari, (c) 1982 $5
COMPUTE 3rd Book of Atari (with RARE 1200Xl memory map) $10 SOLD!
COMPUTE 1st Book of Atari Games $5 SOLD!
COMPUTE 2nd Book of Atari Grafx $5 SOLD!
COMPUTE Mapping the Atari (complete 400/800 memory map) $12 SOLD!!

Epson FX-286 9pin printer manual $2
Atari SX212 manual $1
SpartaDos 1.1 original manual with 1050 Ultraspeed installation docs
$5

basic for adventure games and graphics the Atari way $2 both SOLD!
Compute Magazine issues Septemeber, october and november 1981 $10/each
Compute Magazine April 1982, June 1982- Nov 1983 (complete) $5/each
Computer December 1983 (mega issue) $8
COMPUTE magazine Jan. 1984 - December 1986 $3/each
COMPUTE October 1987, April 1988 $2/each
COMPUTE May 1988- March 1989 $1/each (no more Atari 8bit support in these
uissues)

Family Computing March 1985 $1
Atari Adventurer April 92 $1
Consumer Resport Feb 1984, compares C64/Xl/Coleco and TRS 80 $2
Users Guide to Atari (contains product info) $2
Computer monsters (basic programming book) $1
Atari Explorer Jan/Feb 89, February 1992 (both issues $3)

Analog November 1989 $2

Antic June 84, Aug to Dec 84, $3 each
Antic January to December 1985 complete, $2.50 each
Antic Jan 86, Feb 86, May 86, April 87, May 87, July 87, $2/each
Antic Sept 87 - December 87, $2/each
Antic March 88, June 88, May 88, $2/each
Antic october 1988 thru to May 1989, $1.50 each

Antic Anthology 1982 Volume 1, book.. $5 SOLD!!

Prices are in US funds and are firm unless you want to buy more than one item.. then prices are negotiable..

Please reply via private mail.

Alan

ALSO added to the list

What Else Can you do with a MicroComputer by hayes 1984
-- has basic programs for the ADAM, Apple, C64 and Atari 8bit
-- games, productivity, simple basic stuff $1 50 pages

Understanding Computer Grafx by Usborune/Hayes with simple basic programs, not much Atari stuff in this one but it is great for children to understand computer grafx $1 50 pages

Basic Atari Basic by Coan and Kushner, hayden Books
- this baby has everything about the 8bit (in basic) sound, grafx, i/o, etc, 1984, has tonnes of type in programs $10 over 300 pgs

Inside Atari Basic by Bill Carris about 160 pgs, an excellent intro basic book with humurous pictures. Not as technical as the previous book $5

Well.. you can usually find what you're looking for off of the internet.. but you'll pay out the yin-yang for it. My suggestion is to hit some of your local thrift stores & flea markets before you commit to buying off the net. I've bought huge boxes of Atari equipment from thrift stores (sometimes with 4 & 5 8-bit computers) for around $10 - $15 bucks. Some times you get working stuff.. some times you don't. But even non-working items have value. Where do you think the internet sellers get all of that "untested/as-is" stuff from? :)

Good luck...

I know american technavision or B&C both have cables and PCB mount
SIO connectors available. If they were not made for atari, they
are pretty rare then, since none of the major suppliers, like
DigiKey, carry them.

About 2 months ago a mod appeared on one of the websites for adding the other Atari OS roms piggyback on the 1200 rom, so you could select with a switch the OS you wanted. I printed out a copy, scrounged the materials, and as usual, have now lost the printout. Re-visited every faq and site I can find, but can't relocate the instructions. Could someone send the file if they have it?. I'm not slick enough to attempt it cold turkey. Thanks, James.

Ronald,
I saw a ad in the Power Up computer mag. it says Atari 64-Bit Jaguar System. The artical reads. "If you couldn't get your hands on the Ninendo 64 this past holiday season----you lucked out. That's right you can now get yourself (or the kids) a true 64Bit, full 3D game system. etc, etc. Includes 3 games 1-Cybermorph 2-Checkered Flag & 3-Kasumi Ninja. ALL this for $59.99. And their other game packs are bundled 3 to a pack for $29.99

Somebody once posted some info on the "origin" of the SIO
connectors---all I remember is that they're not a proprietary Atari
thing but were used by virtually no one else.

Source record: 72616

I have one. It was the first XL, even before the 800XL. Like the old Atari 800, Basic roms aren't built in. It has 64K of ram like the 800XL. Programs were rarely written that made use of those 4 function keys, F1 - F4 (I think LOGO and maybe others allow them to be used as cursor keys, but I never touch them).
The stock 1200XL didn't allow power to be drawn from the SIO port, so if you connected something that needed power from the computer, like some printer interfaces or modems or the last tape program recorder, they wouldn't work. A simple modification allows these things to work. Your computer might have had it done already.
Many have said that the 1200XL keyboard is the best one in the Atari 8 bit series. I don't really know. Anyway, I think it's the only Atari 8 bit computer that starts up with that really cool rainbow effect screen when started with no cartridge and nothing on the SIO port.

4785. SIO2PC for cassettes / storing cassettes on a PC

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-04 00:00:00 UTC
From: ernest@pi.net
Message-ID: <3395e041.2728838@news.pi.net>
Source record: 72619

For those of you that like ALL classic Atari software, there is now a
way to store all software that has been recorded on cassette tapes on
the hard disk of your PC. I have written a program that is similar to
the SIO2PC utility written by Nick Kennedy. But this one is intended
for use with cassette software. You will need the following items:

Any PC equipped with a sound card and about 50 to 100 Megs of free
disk space to work with. The sound card should be able to sample sound
at a sample rate of 44.100 Hz mono. The sample must be recorded into
a .wav file.
You need the wav2cas program to convert the .wav file to a .cas file.
The .cas file is a digital cassette image file that only contains the
data that is on the cassette tape. Once you have that, you can throw
away the .wav file. The .cas files are typically 16 to 64K, so they
are relatively small.

To load cassette files into your Atari (i.e. boot a digital cassette
image) you do not need a sound card. You do need a SIO2PC cable or
similar device. You also need the cas2sio program.

The wav2cas and cas2sio programs should be available from the archives
of Umich by now. They have been put together in one zip file
wav2cas.zip, along with the documentation and the 'C' source code.
You can download it through the web interface at the URL
http://www.umich.edu/~archive/atari/8bit/Emulators/Peripherals/wav2cas.zip
Note the capital in Emulators and in Peripherals.
Thanks to William Kendrick for helping me get it uploaded there!
You can also try the gopher stuff:
gopher://gopher.archive.umich.edu:7055/11/atari/8bit/Emulators/Peripherals/

Steven Tucker, the author of APE, has added support for this file
format as of version 1.15 of APE. It looks real neat, so try that out
too! Thanks to Steven for adding a nice user interface for these
cassette images. He did a nice job. I am hoping other using are
willing to write some programs to get more enjoyment out of this
underrated storage medium.

My stuff is available totally free for personal use, so I hope you
enjoy it. Read the docs about the conditions.

Keep those XL's/XE's humming.
If you have any questions feel free to E-mail me: ernest@pi.net

4786. Classic Computers Discussion List Info.

Yep - it's time to promote the Classic Computers List
once again. If you don't want to read this message
then stop right now.

The Classic Computers List is a discussion list for
people who collect/preserve/restore old computers of
any kind. If you would like more info you can find
it at http://weber.u.washington.edu/~bcw/ccl.html.

If you don't have access to the web, then send an
e-mail to bill@booster.u.washington.edu.

On the web site you'll find information on how to
subscribe in addition to the two ClassicCmp FAQs.
If you decide to subscribe, please read all three
documents first.

Never seen the SIO connectors used on anything but an Atari....
American TechnaVision has a million of them - at good prices. Look for
posts by R. Maddox - he is ATV.

or, I could look up his phone number when I get home.

I guess EA figures it is no longer profitably to do in house development
and perhaps let the smaller potatoes do all the hard work (i.e.
programming) and just publish and distribute stuff.

Who knows for sure..

Alan

: started with no cartridge and nothing on the SIO port.

This replaced the Atari 800 memo pad routines.

The 1200XL has the potential for being the best 8-bit, but only after
heavy modifications. Luckily, there is plenty of room inside for
expansions and hacks.

4791. Low Audio - Atari 800

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-05 00:00:00 UTC

Hello All,

Many thanks to Bob Bell who recently bequeathed his entire Atari computer collection to me. I am having great fun trying to connect everything and resoring hardware that has not worked in 10 years. If any members of Atari User Groups local to N. New Jersey would like to contact me, please drop me an email. I'm looking for a group or individual who will use the items that I do not need.

Anyhow, one of my planned projects has been restoring the the audio output on one of the Atari 800 computers that Bob gave me. The system is in prefect working order and pristine minus a very weak audio signal. I would like to fix the audio so that this system could be put back inot the mainstream 8-bit world. It already has 48K installed and looks brand new.

Bob has replaced ANTIC and POKEY as well as the 6805 and most other socketed chips with no improvement. I suspect that this audio problem is probably as simple as a weak capacitor or failing transistor somewhere in the works. In my owrk with Atari 2600s, weak audio is almost always the culprit of a smoked capacitor. I do not know if Atari ever published a Field Service Manual for the 400/800, or if any of the c.s.a.8-bit users are very familiar with the nooks and crannies of the system, but perhaps someone can provide me with some pinouts, documents, etc... that will help me locate the correct transistor or capacitor to replace? Maybe someone will even wipe my nose for me and tell me what is -really- wrong with the computer and how to fix it. :)

Thanks for all your time,
Jon Savory

And the #1 most frequently asked Atari 2600 question is... <drumroll>
"What kind of power adapater do I need for my 2600?"
The answer? 9 volt @ 500 mA with a 1/8 inch, possitive-tipped plug!

4792. FS: Vintage Microcomputer Books

Collector's Book Sale!

I've decided to share a recent used bookstore find with other collectors of vintage computer stuff.

These are all books published by Franklin Watts in a series called "Computer Literacy Skills". All the books in the series were written by Christoper Lampton. They are hard bound with paper covers. The books themselves are in mint condition, but the covers range from mint to very good (some tears). They are all copyrighted in 1984/1985. The best books will be sold on a first-come, first-served basis. These are really nice books, and I am keeping a set for myself.

The titles are:

Graphics and Animation on the TRS-80 Models I, III and 4

Graphics and Animation on the Atari 800, 400, 1200XL, 800XL, and 600XL

Graphics and Animation on the Commodore 64

6502 Assembly-Language Programming for Apple, Commodore, and Atari Computers

Z80 Assembly-Language Programming for Radio Shack, Timex Sinclair, Adam, and CP/M Computers

PILOT for Beginners

FORTH for Beginners

I have a total of 43 of these books in different assortments. I am selling each book for $4.00 each. Buy all seven titles for $24.00 (in other words buy six and you get one free).

All books will be shipped in a protective cardboard container to preserve their superb condition. Shipping charges are bourne by the buyer.

If interested, please send e-mail to dastar@crl.com

there is a diskbased shareware or pd-version by fte out there...
you can copy it in bundle with pxformer 3.0 and pay the share-ware
price to the pcxformer guys... but as i know it right the 3.0 is
free now... so theoreticly this mac/65 version could be free, too?

A 1200XL? That's all I use! I got 'em with hard drives inside, 80 column cards inside, 4 megs inside, floppy controllers inside, 65816s inside, programmable OSs..... I love them. You have to tweak them a little - in the video and the OS. Then, they work real nice. Stop looking on the net, newsgroups and web, and look in Atari Classics magazine!
What info are you looking for?

That is kind of a messy way to upgrade the 1200XL OS, I would think.... I usually just replace the ROMs with EPROMs and use the TV switch to select 800XL or 800 code. I don't have the upgrade you were requesting, but I do have a set of instructions for doing it my way.

4802. Bulk Mail Software: Mailloop

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-05 00:00:00 UTC
From: a
Message-ID: <5n74ck$v@newsfep3.sprintmail.com>
Source record: 72487

Mailloop v3.0 is an industrial strength bulk mailer.

Mailloop v3.0 is a bulk mailing program for the internet. It can take a single message and broadcast it to either a listing of e-mail addresses or to a listing of newsgroups. Creates custom newsgroup lists by filtering NNTP servers. Creates custom e-mail lists by extracting them from newsgroups. Can also extract e-mail addresses or newsgroup names from other protocols. Built-in NNTP, SMTP, POP, FTP, HTTP, EXEC, CGI, WHOIS and FINGER clients. Anti-cancelbot feature. Automatically processes remove requests. Includes extensive on-line help.
The most powerful bulk mailer available. Requires Windows 95 or NT 3.51+ and internet access.

The "Program" Mailloop is only available in English.

For more info goto: http://205.199.4.219

http://205.199.4.219

Using it is easy:

1) Create a message (http://205.199.4.219/editor.htm)
...by using the pull down menus or
...by using any editor

2) Create a newsgroups list (http://205.199.4.219/news3.htm)
...by filtering an NNTP server or
...by importing from any text file or
...by manually creating with any editor or
...by extracting from any FTP file or
...by extracting from any HTTP file

3) Create an e-mail list (http://205.199.4.219/em3.htm)
...by extracting from newsgroups or
...by importing from any text file or
...by manually creating with any editor or
...by extracting from a WHOIS response or
...by extracting from a fingering response or
...by extracting from a UNIX response or
...by extracting from any FTP file or
...by extracting from any HTTP file or

4) Broadcast the message
...to the e-mail list or (http://205.199.4.219/embc.htm)
...to the newsgroup list (http://205.199.4.219/ngbc.htm)

5) Then process the remove requests
...by using the mailbox processor (http://205.199.4.219/pop.htm)

6) If you want you can use the Newsletter Sever
...The Newsletter Sever will allow you to have an topic-specific newsletter that other can subscribe
and unsubscribe to.
...Customizing this server response files (http://205.199.4.219/response.htm)
...Creating a new newsletter (http://205.199.4.219/create.htm)
...Creating and Updating a newsletter the actual newsletter (http://205.199.4.219/update.htm)

Thanks for the response, Bob!. This way is the only route I believe I
can take, as I don't have an E-PROM burner, and wouldn't know how to
do it if I had the tool and chips. It just seemed a simple matter to
grab the ROMS that are already set up out of junked 8-bits. Unless
there is a source of burned E-PROMS out there somewhere I can
purchase. Anyway, if your instructions are in a txt file , maybe you'd
e-mail them to me? I'll check B&C and Toad for chips. Thanks. James

Not having seen your upgrade.... the 1200XL has two ROMs - the 800 has three - and the 800XL/130XE has one. No simple matter to make them work together... AC subscribers can order ROMs from me directly. (this being a very thinly veiled attempt to entice subscriptions... :)

Bob

O.K. Bob. Our user group just voted last night to renew our sub. to
the Atari Classics mag and disk. The disks go in our library and are
easy to access. One mag for the group never gets around though, so I
wouldn't mind subscribing to it. I've about changed my mind on the mod
though. Probably beyond my capabilities. The mod I read just involved
soldering extra piggyback sockets on the existing chips, and running a
control wire from one pin on each OS to the switch.---perhaps I
misread it. Easy to do at my age. I'll have to look up your sub. info
on the net. james.

4810. Re: MIO or Black Box?

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-06 00:00:00 UTC
From: guy1015@aol.com
Message-ID: <19970606081801.EAA12982@ladder02.news.aol.com>
Source record: 72495

Funny how an old post returns with a reply almost taken out of context.
The BB has flowcontroll in hardware and system OS, on the other hand
the MIO has the hardware but no code in OS. ICD at the time just didnt
do
it. Have you ever see a screen of Atascii graphics come threw at 19.2
without flow controll? <Yuk> I know first hand, I run Star NET BBS
for
9 years. However there is now a RS232 handler for the MIO called
Hyperspeed
Developed by Len Spencer that Lets the MIO controll the flow.

The original post had nothing to do with floppie drives.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

Atari 8-Bit Computers: Frequently Asked Questions / Michael Current

4813. FS/T: Atari 8-bit computer items [06/06/97]

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-06 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <339cfa1c.1012267@nntp.ix.netcom.com>
Source record: 72498

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *before*
asking any questions, or placing any orders. Thank you!

This list was last updated on 06/06/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 4.00 Atariwriter
$ 4.00 Basic -- for use with the Atari 400 and 800
$ 5.00 Centipede
$ 9.00 Delta Drawing (Spinnaker)
$ 8.00 Frogger [Parker Brothers]
$ 2.50 Missile Command
$ 2.50 Space Invaders
$ 4.00 Star Raiders

Cartridges with case and manual:
$15.00 Alphabet Zoo (Spinnaker)

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips

$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$24.00

*****

LOT #2

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 4.00

*****

LOT #3

ATARI 820 PRINTER, with two (2) rolls of paper and built-in
power cord.

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$12.00

*****

LOT #4

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$17.00

*****

LOT #5

EPSON RX-80 PRINTER with built-in power cord.

$29.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your
order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address
(this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

On 1997-06-02 1stlight@worldnet.att.net said:
>'lo
>I recently dug up a 130XE with a 1050 FD and a XM301 modem at a
>re-sale shop. I need DOS to get it running. Any suggestions?

The XM301 modem has a handler built-in.
My 1030 modem had a handler AND term programme.But I don't know about the XM301.You could write a X-modem programme in BASIC.It would be slow,but at least you could download a ML term programme.
Of course this depends on a number of factors.

1.Access to the XM301 T: handler programming specs. (I could provide these)
2.Access to the X-modem protocol specs.
3.Being able to download DOS and a term programme unARCed.(try a ATR/XFD site)
4.You actually being a programmer.

Converting a XFD/ATR file to a real disk from BASIC would actually be easy,if slow.XFD isn't even a file format,it's just the raw sectors from the disk.ATR is the same with a 16-byte header telling you what kind of disk it is.

In sumary,I'd try turning on the 130XE with the 1050 turned off to see if you can boot off of the XM301 like you can the 1030.

In addition,it would be nice if someone would write up a BASIC programme that would download a ATR/XFD directly to disk and put it up for HTTP/Gopher/FTP/finger/telnet access so that someone could type it in.

If you have access to telnet on your a8, you can view web pages that have
frames by first telnetting to the sailor anonymous lynx server at
192.188.199.5. You can use this lynx server to surf the web, via it's
text-based interface. When you come to a web page that has frames, you'll
get a menu for each page that makes up the frames. You can then select
which one(s) you want to go to.

Regards, Tom.

at your age? gee.... we may have a senior citizens discount. :)
We have more than a couple of 8-bit folks out here that will never see 70
again. What I do is use one of those big magnifiers on a lamp arm when
I'm soldering. Of course, I have about 100 spare boards.....
Then again, I've seen a couple of real messes done by the younger
generation, too.
I tell you what.... any AC subscribers that mess up their 1200XLs by
hacking on it, I'll clean them up. How's that for sticking my neck out??
Just don't tell Sharon about my offer, or I'll be building bathrooms and
garages for the next six months. And, sleeping in the Attic with my
Ataris. :)

> impossible.*

Inside your standard composite monitor, the electronics decodes the video into analog RGB signals. This is what drives the CRT. If you duplicate the monitor circuits, you can use an EGA or analog RGB (ST, etc.) monitor.
BUT, what's the difference? Any TV with a composite input will do all this for you. Better yet, use a S-Video monitor like I have. Why build a bunch of stuff and use a hard-to-find and maintain monitor? If you think you will get EGA quality video, you'll be disappointed. Only way to do THAT is back in GTIA circuits. Long before you get to composite....

Bob Woolley

and, yes. I have thought about doing it back in GTIA. Might as well do it on a VGA monitor, then.

Hello dklugh@iwaynet.net,

din> I also heard that TRS-80 Colour Computers don't have artefacting in
din> PAL.
din> Is this true for other computers?

Yes, the machine for the discerning reader (read: you, and an Atari
8-bit), don't do artifacting in the same way that an NTSC machine does. =
More's the pity. :-(

4823. Demon Attack ???

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-07 00:00:00 UTC
From: rayrite@blue.engin.umich.edu
Message-ID: <5nah8b$b8e@srvr1.engin.umich.edu>
Source record: 72508

Hi I am a happy owner of a 600XL with 64K of RAM.
I bought the computer and Demon Attack game from B&C Computervisions
in 1991. I brought the system back out to do some work on it.

I tried to play my Demon Attack cart on it and it wouldn't work.
I know that there are some games like Chicken, etc. that will only
work on a 400/800. The ad I read in the magazine when I bought it
also pointed out some of the games (as also their web site).
I didn't see (400/800) next to demon attack so I bought it hoping
to play it on my 600XL.

Well I just stored this game and happily played my other ones, but
now that I brought my system back I wanted to pose this question.

Does the game actually work on a XL machine? Is there a compiled
list of games that work on a 400/800 and not on an XL?

Thanks, any info would be appreciated. And I'm sorry if this is
in a FAQ somewhere (i'm slowly but surely going through all the links!)

-RDW

4824. Atari Stuff For Sale

Atari items for sale. I'll pay one half the shipping and handling costs
but NOT the C.O.D. charge. If you don't believe the prices are fair I am
willing to listen to your offer. Enjoy!

1) The Hitchhiker's Guide to the Galaxy --Infocom text game. Original box
and manuals. Check it
out the props are still in the box! Price $5 SOLD

2) Flight Simulator II --subLogic flight simulator. Original box and
manuals. Including the
navigation maps. Price $15

3) AtariWriter and Atari Proofreader --the classic word processor and a
dictionary program.
Original manual including the quick reference sheet for the AtariWriter
but no documentation for
the Proofreader and no box. Price $25

4) Movie Maker --an animation construction set by Electronic Arts.
Original manual and box.
Price $10

5) 5"1/4" Disk Organizer with disks! --a grab bag of software everything
from Antic Magazine
disks to games like Mail Order Monster and Summer Games both classic 80's
computer games.
Price $25

6) Atari 1010 Cassette drive --not sure if it works but power supply and
light seem to work. Also
included is the data cable and a conversational French program. Has sound
and original box and
manual. If anything this is the first multimedia device for the Atari!
Price $10

7)Atari 1027 Daisy Wheel printer --not sure if it works but power supply
and light seem to work.
Also included is the data cable. Price $10

Several months ago I advertised I had the complete package and had several offers. Then I couldn't find the cart.

Last week I visited a good friend who is a chess player and by accident I discovered I had given him the cart years ago. Since he hasn't used it for ages, I got it back.

So now I do have the whole package including the box, the manual and the cart. All in excellent condition. Pleas send me your offers. I'm sorry to have deleted the offers from before.

I remember when EA came out. They were the coolest game company around. They had drag and drop before the Macintosh (Pinball Construction Set). All of their games were made by one or two programmers each. (And I'm sure that they coded in assembly language!)
I guess that there are only a few of us "real" programmers left. It's too bad. Now it takes thirty people and a corporation to make a game, and I guess EA, which is supposed to mean Electronic Arts, has sold out to the "machine" and is distributing instead of coding. I wouldn't call that an "Electronic Art"!

Henry.

p.s. I think I'm going to get a license plate that says AOL SUX...but that is for another news group.

Yeah, Demon Attack doens't work on the XL/XE series, I have it on disk
and need to run a translator before it will work. Don't know how to
get the cart version to run unless you get one of those dual OS's that
lets you switch between XL/XE and original 800 OS's.

4833. Win95 OSR 2.1 CD $35 W/Fat32, Fat converter, Full install

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-07 00:00:00 UTC
From: jasonben@aol.com
Message-ID: <5nc8tp$d7n$904@usenet85.supernews.com>
Source record: 72518

Win '95 OSR-2.1 on CD with Fat32 Boot Floppy, FAT to FAT32
converter; $35 + 4.50 for Postage/COD, or offer.

Full install version. USB Support. This CD also contains
the Microsoft FAT to Fat32 converter.

Are you tired of losing up to 40% of your disk capacity
to the huge cluster size of FAT16, P-n-Pray that does
not work, poor pcmcia support, misidentified motherboard
resources, CPUs, ect?

Well, moving to the OSR 2.1 version of Windows '95 is the
answer.

Win '95 OSR2 also contains important patches, an expanded
(and debuged) drver library, PnP that works, GUI improvements
and bug fixes.

Yes - Some, not all, of these are available for as downloads.
Yet - The most important parts: *FAT 32*, the Kernel and GUI
enhancements, PnP improvements and proper CPU identifier codes
are NOT available for download and currently can only be
obtained with the purchase of a new computer or "memphis"
(Win'97), whenever that will be available.

The CD is the full install version. Included is a OEM cd-key,
an OSR2 boot floppy for creating a new FAT32 partition, MS CVT.EXE
for converting a FAT partition to FAT 32 detailed installation
instructions. In addition to these instructions, there is full
documentation on the CD. There is no "paper manual." Except
detailed installation information. Your current Win '95 manuals
will still apply, with a few *highly documented* exceptions.

The primary reason for migrating to OSR2 is, of course, FAT32,
which increases the storage capacity of your drive simply
by keeping the cluster size at 4K, despite the size of your
hard drive. It also recognizes partitions larger than 2.1g,
the current Win '95 limit.

I was hoping to get $ 35 for the CD, Boot Disk and instructions,
+ 4.95 for USPS COD. I am, however, open to reasonable offers.
I will pay shipping on pre-paid orders.
E-mail for more information.
Jason

I believe the Lisa had drag and drop first. (And Xerox PARC probably had
it before that.) In fact, Trip Hawkins was on the Lisa team at Apple (in
what capacity I don't recall) before he left to found EA. Apparently he
brought some of the ideas with him. EA's Deluxe Music Construction Set had
a similar "look and feel". Interestingly, both programs were ported to the
Mac early on. I used the Mac version of DMCS to do MIDI stuff until System
7 broke it. EA had dropped its support long before.

The last EA thing I ever bought was Studio 8 (for Mac) which was very good
(though not actually developed by them--someone in France did it). It was
replaced by Studio 32 which was not so good (slow) and, like many others
since, could not compete with Photoshop.

From: ellman@xs4all.nl
Message-ID: <5nd19t$mg3$1@news0.xs4all.nl>
Source record: 72524

Would it be possible to reverse this process so that a file can be converted to tape and transfered from the PC to the XL. This can have the following uses.

+ Any PC owner with a soundcard and XL with a casette drve can transfer stuff between the PC and the XL without having to build/buy extra hardware. This is a slow transfer method, but for some, it's the only one they can immediately use.

+ You can create casette software with a PC.

In De-Re-Atari, there's a whole section on how the Atari Casette format works. Writing casettes should be a lot easier than reading them. It mentioned that one of the stereo channels is used for data recording, and the other for sound. It would be cool if you could convert your data to tape format on a PC and mix a sample that is to be played while the tape-file loads. Due to the nature of the casette format, you can adjust the interval between data blocks so that it's the same length as the sample. Perhaps, a more advanced utility could be made that helps you build one of those multi-media programmes that started and stopped the tape so you could listen to it. You could also mix someone speaking the program instructions while the program loads.

AE.

PHOTO PHOENIX INTERNATIONAL

We are an international New York based agency representing
amateur and professional photographers in the following areas: Galleries,
Business and Organizations, Book Publishers, Paper Products, Consumer
Publication, Newspapers & Newsletters Publication, Special Interest Publication,
and Trade Publication.
We are seeking photographers who strive for excellence in the aesthetic/
creative and technological world of images, who have the talent to capture
the setting and to convey the mood. Your work should reflect a genuine,
pervasive interest in photography as a fine art.
Whether your work portrays conservative, experimental, stylish, or innovative
themes, your project proposal should be well thought out before submitting to
us.
For first contact, please submit a query letter, direct mail flier/brochure,
tearsheets, slides, photographs & SASE.
For amateur photographers, send sample photos and/or slides.
TO ALL: Do not send entire portfolio unless we ask for it. If we are not interested,
you might not hear from us, so please submit material that does not need to be
returned.

Send to:
Photo Phoenix International
33-29 58 Street
Woodside, New York 11377
Tele: Florida Branch-(941) 642-660

4841. Re: Atari 64 Bit

>bundled 3 to a pack for $29.99

You DO know that the Jaguar only 32-bit.(if that!)
I think that it has one 32-bit and two 16-bit chips.Aparently they think that
that makes it 64-bit.(and all three chips aren't CPUs)

Net-Tamer V 1.08 - Test Drive

Relatively simple ... though I haven't done a software only approach, I do
have an RS-232 to Atari cassette interface circuit from my old 6800 system.

As I recall, all one needs is a simple frequency shift circuit between
1200 Hz and 2400 Hz, at a 600 baud data rate.

Golly, ancient history from when Ataris were expensive .. I also have
an homebreww interface to connect the Atari to a high fi stereo deck,
both record and playback ... from back when I had more time than money,
and was saving the $ and not buying the Atari tape deck. My stereo
deck had solenoid control, so the Atari could start and stop using the
pause function.

*QIX from Atari. box and manual. excellent.

$5.00 COUPON from Atari. Offers a check for $5.00 if you buy something and fill out coupon. I doubt it.

DATASOFT catalog from 1983. 6 colorful pages of stuff. Excellent

APX (Atari Program Exchange) Product Catalog. Winter Edition 1983-84> Complete with address label to Me. Screen shots of the 14 games offered. I'll bet you never heard of any of them! Mint

ATARI O.S. and Hardware manuals. November 1980. These are the cheaply printed official Atari in-house manuals. Mint

Atari 800 Mailing List (computer program maunal). Excellent

Atari Basic Instruction Manual. Excellent

Atari Microsoft Basic Instruction Manual copyright 1981. Excellent

DE RE ATARI a guide to effective programming, by APX (Chris Crawford). In a spiral notebook, has a few pages loose. Good.

WORD PROCESSING DISKETTE by APX. This is the manual for the Atari Program-Text Editor, and Text Formatter (forms). Excellent.
Medit manual. Xerox copy. Medit stands for "Mike's Editor." Mike is

Mike Lorenzen who went on to work at Activision.
Medit Manual. Cheaply printed inhouse manual for Medit,. Dated 3/02/81. In a glossy graphic Atari 400-800 personal computer 3 ring notebook. good.

ATARI DISK OPERATING SYSTEM 2 reference manual.

FONTEDIT from IRIDIS. 56 pagr manual for an interesting package that was on Cassette tape..I think I have the program on diskette.I'll check if I get any interest in the package. Excellent

ATARI MUSIC CONSTRUCTION SET REFERENCE CARD xerox of about 10 pages.Good

ATARI MACRO ASSEMBLER MANUAL. Excellent

MATCHBOXES instruction card. Very Good

EPYX 1983 catalog 8 pages fold out. 8 1/2 by 11" color brochure.Mint

PLANE WRAP SOFTWARE box from Rantom Software. This box doesnt say what was inside cause they used the same box for all their products. I forget how you were supposed to figure out what was in the box. Good

FLOPPY SOFTWARE:

VEGAS POKER User's Guide plus floppy of the same game. One floppy stamped "Atari Company Trade Secrets Enclosed". I guess I had one of those stamps.This is the program I wrote at night while a Game tester. It led to my being promoted to programmer, but I refused to "give" it to the company so it never got published. User's Guide is 1 page printout. The game is the first Poker Slot Simulation ever written (to my knowledge)

CARTOON MAKER 1982 by me. 5 page instructions for a stupid little software toy I put together using routines I had written for the PLAYER MISSILE EDITOR. Floppy plus manual

ATARI MUSIC II. Release software. 2 diskettes, manual, warranty card, box

FAMILY FINANCES 1 & 2. Official Atari release on 2 floppys. User's Guide included.

PREPPIE II. Floppy plus very colorful manual, plus very colorful plastic box.

SOUND AND MUSIC TRICKY TUTORIAL #6 manual and casette tape from Educational Software

CROSSFIRE Floppy Disk in official dust jacket plus manual from ONLINE SYSTEMS (later became Sierra OnLine)Excellent

REALM OF IMPOSSIBILITY by Mike Edwards from Electronic
Arts.......Floppy plus box (10" flat square box) from Electronic Arts.
Excellent

THE E FACTOR Floppy and manual and box from Cosmi

SWEAT SYSTEM Rev #3 Serial #24 stamped "Atari Company Private Trade
Secrets Enclosed". There are 5 floppys in the set. The trade secret
stamp is on a sticker that has been removed from disks 1 and 2 only.
Disks are labeled as follows:
disk 1: Screen, Dledit, and Sstrans
disk2: Screen, Cedit and Sstrans
disk3: Pmedit and Sstrans
disk4: Sound and Sstrans
disk 5:P/M Animation Driver

EXCALIBUR 1.0 the official floppy by Crawford, Summers, Atkinson, from
APX (Atari Program Exchange)

A.E. floppy from Broderbund. Stamped Dealer Demo, not for resale. In a
Broderbund dust jacket plus manual

BANK STREET WRITER floppy from Broderbund. Stamped Dealer Demo, not
for resale.

LABYRINTH floppy from Broderbund. Stamped Dealer Demo, not for resale.

SKY BLAZER floppy from Broderbund stamped "dealer demo, not for
resale:" in Broderbund dust jacket Excellent.

GENETIC DRIFT floppy from Broderbund stamped "dealer demo, not for
resale:" Excellent.

S.A.M. serial # 19722 from Don't Ask Software. Speech synthesis.
Excellent

SEA FOX floppy from Broderbund stamped "dealer demo, not for resale:"
in Broderbund dust jacket.Fair

CASTLE WOLFENSTEIN floppy plus manual from Muse. Excellent

MICKEY IN THE GREAT OUTDOORS. From Walt Disney Personal Computer
Software. in Dust Jacket, plus manual and box. The box is about 8x10",
plastic, with Mickey on both sides (and as with many games from this
period, is the best part of the package).Mint

COIN-OP CONSOLE PLASTIC TITLE PLATES:

I'm sure there is a more official way to describe these. They would
have been part of the game console, except they must have made too
many, so they sold them in the company store. They are all from 1 1/2
to 2 feet long and 5 to 6" wide, and are made of 1/4" plastic. They
have decals on the backside and are meant to have a light shining
through them to announce what game it is.

SKYRAIDER from 1977...this one has a little bit of the paint (decal on back) chipped off. Good

BATTLEZONE from 1980....this one also has a little bit of the paint (decal on back) chipped off. Very Good

SUPER BUG from KEY Games, copyright Atari, Inc. 1977. Good

Yes of course. I suggested several other utilities that could be
written. If you like cassettes, you should download the wav2cas.zip
file. It has about 80K of documentation and suggestions on this
subject.

>+ You can create casette software with a PC.
This is excactly one of the things I mentioned in the docs. You could
create a stereo .wav file from .cas data and then output that to an
audio cassette recorder. This would allow you to create a multimedia
presentation similar to the stuff Atari created to learn foreign
languages. Tapes can be so much fun, if only they would not be slow.

AFAIK it has two 32-bit CPUs and a 68000 (32-bit architecture with 16-bit
bus). The data bus for the system memory is 64 bits wide, so that is
their justification for calling it 64-bit. (Not a good justification, but
that never stopped a game company. Oddly enough, the N64 really does have
a 64-bit CPU.)

Regardless, it is pretty clear that the Jaguar can't compare to the N64 or
PlayStation. Atari was trying to take advantage of the market window
which existed before those two systems were released, and failed to do so,
which is why the Jaguar is being blown out at super-low prices.

Sounds like the same price/deal that http://www.tigerdirect.com has.

Atari was considering the name Atari 64 before they named it the Jaguar.

yes, it uses SIMMs. 8 bit or 9 bit. It will be in Atari Classics issue
#8. Also good for 16mb..... 256K to 16mb, actually.

Greetings Robert!

I just wanted to let you know, that I have full intentions of subscribing again to AC.....keep up the good work! However, I am kinda short of cash and will have to wait until the next issue comes out. So, please let us know when the next issue hits the mail. I don't want to be left out, but I don't want to struggle to get you the cash when I am saving for my trip to Europe....I am kinda late on my ABBUC dues, and must pay for this year AND next when I go to the JHV 97 this Oktober! Anyone else from North America going?

If you are reading Wolfgang, or any other Abbuc members, please send me dates and times in Email. German or English.

Willy

I have a bunch of my 8-bit hardware sitting around looking for a good home:

Atari 800XL (with 1200XL function KEYs ADD + RAMbo 256K)
1050 Drive with HAPPY
256K MIO
1020 Plotter
Commodore 1802 Monitor w/cable
Anchor 2400 External Modem

Make an offer... Really just can't bring myself to throw it away and would
like to find a good home for it...

Collector's Book Sale!

I've decided to share a recent used bookstore find with other collectors of vintage computer stuff.

These are all books published by Franklin Watts in a series called "Computer Literacy Skills". All the books in the series were written by Christoper Lampton. They are hard bound with paper covers. The books themselves are in mint condition, but the covers range from mint to very good (some tears). They are all copyrighted in 1984/1985. The best books will be sold on a first-come, first-served basis. These are really nice books, and I am keeping a set for myself.

The titles are:

Graphics and Animation on the TRS-80 Models I, III and 4

Graphics and Animation on the Atari 800, 400, 1200XL, 800XL, and 600XL

Graphics and Animation on the Commodore 64

6502 Assembly-Language Programming for Apple, Commodore, and Atari Computers

Z80 Assembly-Language Programming for Radio Shack, Timex Sinclair, Adam, and CP/M Computers

PILOT for Beginners

FORTH for Beginners

I have a total of 43 of these books in different assortments. I am selling each book for $4.00 each. Buy all seven titles for $24.00 (in other words buy six and you get one free).

All books will be shipped in a protective cardboard container to preserve their superb condition. Shipping charges are bourne by the buyer.

If interested, please send e-mail to dastar@crl.com for more information on ordering and shipping charges.

>Thanks, any info would be appreciated. And I'm sorry if this is
>in a FAQ somewhere (i'm slowly but surely going through all the links!)

It's not, but let's fix that!

To everyone, please send me a list of all the titles you're aware of that only
run on the 400/800, and not any of the XL/XE's. This will include Demon Attack, Gorf, etc.

E-mail replies to me will me more reliable, my local news server is perpetually
unreliable.

I'll post a summary list to the newsgroup before inserting the info into the FAQ.

Thanks!

-Michael

Wed, 14 May 1997 14:33:05 GMT Robert Smith Ely napisal byl w comp.sys.atari.8bit:
> Ex. To copy files from D1: to D2: work exactly like MS-DOS --- COPY D1:*.* D2:*.*. Subdirectories are similar, but use the > simble instead of \. CD, CHDIR or CWD must have a space following the command --- CD >BASIC. Like MS-DOS you can use CD .. to move up one directory level. MD, MAKEDIR work like CD. ARC is a menu driven program and is not really a COMmand program like the previous commands. It's more of an EXEcutable program rather than a command, but it too is built in to SDX. Hope this helps. The SDX manual is rather large, too big to scan and file transfer. It should be available from B&C ComputerVisions. Vheck out their web page at www.myatari.com.

thanks very much for help. i know sdx manual is large - too large for
transferring it scanned in graphic form. i thought maybe someone has ascii
version of this manual, or maybe could ocr it...

anyway - thanks a lot.

Timothy A. Seufert (bwanga@cats.uc*sc.edu) wrote:
: AFAIK it has two 32-bit CPUs and a 68000 (32-bit architecture with 16-bit
: bus). The data bus for the system memory is 64 bits wide, so that is
: their justification for calling it 64-bit. (Not a good justification, but
: that never stopped a game company. Oddly enough, the N64 really does have
: a 64-bit CPU.)

Oooh... the blasphemy - too many Commodore sponsored mags have you been
reading. ;)
The Jaguar has two 64-bit RISC chips (Tom'n'Jerry), two 32-bit RISC chips
and a 68000 for menial tasks such as joystick I/O. There's a number
of copies of the Jaguar FAQ about somewhere - do a web search. :)

Paul.

Here in the US we have gotten a hold of a lot of european software. Now I know that there's currently a lot of new stuff being made in Poland etc. How can we buy it? TAQUART? and Co. over there- can you tell us how we can get your stuff here in america?

4866. ROCKMAN - Best game ever?

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-10 00:00:00 UTC
From: euskara@aol.com
Message-ID: <19970610032401.XAA27072@ladder02.news.aol.com>
Source record: 72551

OK, OK maybe that was a little bit of an exageration. Still this game made by mirage in 1995 kicks butt - looks more like a 16 bit game. Has anyone else played it? If so, any cheats available? I've made it to level 15 on 3 lives! If you havent tried it, you just gotta!!

4867. Linux/ELKS

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-10 00:00:00 UTC

Message-ID: <5nikkh$i3m$1@news.mco.bellsouth.net>
Source record: 72552

Has anyone else here heard of ELKS? It's the embedded Linux kernel
subset... designed to work on tiny machines. Currently there are projects
to port it to the 8086, Z80, TI 99/4A, and Apple IIgs that I'm aware of.
Would anyone be interested in this, or is it blasphemy? ;-)

4870. Cart to PC, for Pokey & other emulators

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-10 00:00:00 UTC
From: CyberF|re <cyberfire@rocketmail.com>
Message-ID: <339D9FBF.115B@rocketmail.com>
Source record: 72555

Hi, could someone please help me, i want to be able to play my favorite games from my old 8-bit on pokey, trouble is there on carts, I have no idea how to get them onto PC disk.

I have a fair bit of computing know how, from programming to system design, and I know a little about electronics, a layout for a cart to RS232/prn port would be great, failing that an image of Miner2049er, or the games Zybex, Henry's house, the last v8 & loderunner(yes i liked loderunner, it was the first game I ever played)

Tnx.

Hi there!

"Silver Surfer" <SilverSurfer@HalleBoppe.com> writes:

>In the old days, some programmers were hot on synassembler...developed
>internally by Synapse software and used by them for Atari 8-bit stuff,
>eventually got marketed commercially. Anyone have any info on this? I'm
>looking for it :-)

>Fernando

Well, I have the synasm at home, but I prefer the Mac 65 anyways - much better
debugger and the assembler is superb.

Greetings,
Thomas

Not to be a downer, but I would think this would be nigh-impossible.
Now, I would not be unhappy if someone proved me very wrong, but all
the other computers/processors mentioned I believe have better support
for a multitasking environement (I'm no expert though). But then
again, someone does have a multitasking system for the 6502 (just not
for a stock Atari)....

Date: 1997-06-10 00:00:00 UTC
From: STARFLEET@mcleodusa.net
Message-ID: <339cf0ea.14879402@news.mcleodusa.net>
Source record: 72563

ATARI Equipment, MUST SELL!!!

ATARI 400 Computer, 16K, with power supply, manual, and 2 joysticks, TV
connector, original cost $599.00, Joysticks $19.95 each, asking $50.00
or best offer. These SELL AT Video 61 for $49.95 used.

ATARI 1027 Letter Quality Printer, New in Box, with ink rollers,
manual, power supply, connecting cables, oil, original cost $399.95.
Also have a non-working 1027, can be fixed at any Atari service
center,
both printers cost new $399.95 each, asking $100.00 for both of them.
Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very
good condition, like new, supports single and dual density modes,
includes power supply, original cost $179.95, asking $75.00. These
sell at Video 61 for $74.95, same price.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers.
Upgrades and replaces the 6502C in the computer with the 16-bit 65C816
CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up
programs as much as 350% faster. The 65C816 processes 4 instructions
per clock cycle (Only the new P6, 80686 Intel chip does that, besides
this), as compared to the 6502 which processes one instruction per
clock cycle. Original cost $249.95. Includes T816 assembler $75.00,
Cross Developer for IBM $75.00, sevreal other Turbo 816 specific
disks,
valued at $25.00 each. Asking $250.00 for the entire package. These
are not currently available anywhere else that I know of.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific
programs, already wired for Turbo-816 installation, just need to
re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original
cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the
256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for
$59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

ATARI RELATED MAGAZINES, Found this unopened box that I had boxed up
for a person, but then he never sent the order in:

ATARI EXPLORER, February 1985, Cover Price $3.00
ATARI EXPLORER, April/May 1985, Cover Price $3.00
ATARI EXPLORER, Summer 1995, Cover Price $3.00, $3.95 Canadian

ATARI EXPLORER, Winter 1986, Cover Price $3/$3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Sept/Oct 1986, Cover Price $2.95 $3.95 Canadian

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Nov/Dec 1986, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Spring 1987, Cover Price $2.95 $3.95 In Canada

ATARI EXPLORER THE OFFICIAL ATARI JOURNAL, Summer 1986, Cover Price $2.95 $3.95 In Canada

The Above Magazines are in good/fair confition. They are from the same
collection the above 1027, 1050, are from, the previous owner suffered a stroke and asked me to dispose of these for him, as he has moved, and
I am asking FAIR MARKET VALUE, as can be seen from the prices sent to me by Video 61, who seem to use the Internet and stocks and sells Atari
equipment, Video 61 may send me an offer on these then, as I need the cash.

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

Will consider trading for a trak AT-D4 double sided disk drive NEED ONE
BADLY someone has to have one, or a trak double-sided slave drive.
MAKE OFFERS!!

NO! Don't try to use an SIO2PC cable to connect a 1050 directly to a PC.
The SIO2PC is only used for connecting a PC to an Atari 8 bit computer.
What you are looking for can be found in 2 places that I know of.
APE at http://seka.nacs.net/~classics/ has both an SIO2PC compatible cable
and also the "PROSYS" cable that allows a 1050 to be connected to the PC
to allow direct transfers of a disk to ATR image on the PC.
Emulators Online at http://www.emulators.com/ used to sell (and might
continue to sell) its XFORMER cable that allows its Atari 130XE emulator
running on a PC to load programs directly from a 1050.
Hope this helps.

Message-ID: <5nmo15lqr1@news10.gte.net>
Source record: 72375

Many programs I try to run on the Atari 800XL won't work even if I press the Option button while loading the program or using the Translator diskette. I heard that there was a ROM that amongst other things made the 800XL more compatible with the 800. Is this available somewhere?

If I can't get something to make my 800XL more compatible I'd be interested in buying an Atari 800. Anyone got one complete and working for a reasonable price?? :)

Well, version 4 of SIO2PC allows you to connect a 1050 to the PC and
then read from it. You have to modify the cable though. All this is
in the SIO2PC documentation. Just wanted to straigthen this out.
It also supports bad sectors and stuff like that, and documentation
on the extensions to the ATR format are included. But then again
nobody ever reads documentation, so how would anybody know?
I think this is also somewhat experimental of nature. The APE PRO
system has been around for some time too.
As far as I know the current version of SIO2PC is 4.13. It can be
obtained from Nick Kenneddy of course.

Well its a) Pretty old now and b) no longer made or supported. Pretty good
at the time and probably worth it if you get one cheap but nothing at all
like the N64. More like a poor Saturn or Playstation. Iron Soldier, Super
Burnout and of course Tempest 2000 were pretty good.

4887. M.U.L.E. on an 800XL with FIX-XL?

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-11 00:00:00 UTC
From: ziggy29@netgate.net
Message-ID: <ziggy29-ya02408000R1106971538470001@nntp.netgate.net>
Source record: 72378

Now that I downloaded FIXXL.ATR and converted it to an Atari disk, I can run a few programs on the 800XL which used to require the 800. I no longer have the 800 set up anywhere. M.U.L.E. will boot up, but starts acting funny when selecting characters, presumably because there are only two joystick ports when it's expecting four.

Is there no way around this other than to drag out the 800 again?

4888. What is a "vaporware"?

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-11 00:00:00 UTC
From: peter@soemtron.sb.sub.de
Message-ID: <6YgVdfF4zHB@peter.soemtron.sb.sub.de>
Source record: 72379

Howdy !

sorry, I'm a german student. I try to translate the official atari faq to
german. But there is a word with no entry in my dictionary...

what are "vaporware computers" ?

here the entry in the faq:

Atari 8-bit vaporware computers: (note some are more vaporous than others)
800-D (Developers Bus System)
1200 1200XL internally, many slight cosmetic differences
800XLF late 800XL with a redesigned motherboard, & FREDDY (from the XE's)
1250XLD Earlier concept of the 1450XLD
1400XL 800XL plus modem, speech synth.(looks like a 1200XL)
1450XL Earlier concept of the 1450XLD
1450XLD 1400XL plus 5.25" floppy drive
1600XL ????
65XEP 65XE plus 3.5" floppy drive, 5" green monitor
65XEM 65XE plus AMIE/AMY sound chip

---

would be nice if you english speaking people explain me this one with some
other words :-)

for the german speaking people:

h��? Prototypen? ... prototype
Entwicklungscomputer? --- klingt bl�de
Testcomputer und nie ver�ffenlicht? === vaporware?

4891. Atari Dos 2.0D

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-11 00:00:00 UTC
From: david moeser <erasmus@one.net>
Message-ID: <Pine.LNX.3.95.970611024341.12496I-100000@shell.one.net>
Source record: 72382

On 1 Jun 1997 dklugh@iwaynet.net replied to a posting where I had written:
->>> I've never seen any difference between Atari Dos 2.0D and its
->>> much more common cousin 2.0s, except of course that it works in
->>> double density and has a density-change option on its menu.

In his 1 Jun 1997 reply, dklugh@iwaynet.net wrote:
-> Are you sure, the 815 was only supossed to support double density.
-> Hence a "density change" option would be useless.

You betcha I'm sure! <grin> I've had a copy of 2.0D and used it for a decade now! It's a "normal" DD Dos program; it works in either single density or double density, and with disk drives in either density.

-> Maybe your version has been hacked.

Anything's possible. But I think it's unlikely. In the heyday of the 8-bits the 815 drive was famous as vaporware -- or at best, semi-vaporware. If the only way in which 2.0D was originally distributed was with a vaporous product like the 815, that could explain why this Dos program was (or is) so rare.

Also in his 1 Jun 1997 reply, dklugh@iwaynet.net wrote this response to my tagline:
->>> * Then there's Vapor DOS 3.14159265: triple density only! *
->>> (Well, actually, it's "pi" density: 402.1 bytes per sector!)
->
->Actually,density and sector size have nothing to do with each other.
[10 additional lines snipped]

Cheer up! I think you're taking this too seriously. It's a joke, son! (Special note for Atarians in Upper Volta or the Falkland Islands who actually have copies of "PI DOS 3.14159265": Please hold off on sending in those cards and letters. We know you have Vapor DOS and have used it successfully since UNIVAC days. We thank you for your support!)

Cyberfire,
This is easy, go to http://www.hackerz.com locate the Atari 8-bit archive then whichever game you are looking for. Most are available in either and ATR emulator disk image or as an EXE executable file.

4898. Atari software for sale

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-12 00:00:00 UTC
From: cdhoste@aol.com
Message-ID: <19970612035801.XAA05643@ladder02.news.aol.com>
Source record: 72383

Atari items for sale. I'll pay one half the shipping and handling costs
but NOT the C.O.D. charge. If you don't believe the prices are fair I am
willing to listen to your offer. Enjoy!

1) The Hitchhiker's Guide to the Galaxy --Infocom text game. Original box
and manuals. Check it
out the props are still in the box! Price $5 SOLD!

2) Flight Simulator II --subLogic flight simulator. Original box and
manuals. Including the
navigation maps. Price $15

3) AtariWriter and Atari Proofreader --the classic word processor and a
dictionary program.
Original manual including the quick reference sheet for the AtariWriter
but no documentation for
the Proofreader and no box. Price $25

4) Movie Maker --an animation construction set by Electronic Arts.
Original manual and box.
Price $10

5) 5"1/4" Disk Organizer with disks! --a grab bag of software everything
from Antic Magazine
disks to games like Mail Order Monster and Summer Games both classic 80's
computer games.
Price $25

6) Atari 1010 Cassette drive --not sure if it works but power supply and
light seem to work. Also
included is the data cable and a conversational French program. Has sound
and original box and
manual. If anything this is the first multimedia device for the Atari!
Price $10

7)Atari 1027 Daisy Wheel printer --not sure if it works but power supply
and light seem to work.
Also included is the data cable. Price $10

> what are "vaporware computers" ?

"Vaporware" can also apply to software. Basically, those are products that are usually designed and produced with intentions of being released, but often never get past the prototype phase. Atari, as you have noticed, was famous for making quite a few of them.

Sometimes the products *are* released, but are such bombs that they disappear rather quickly.

4900. mouse-driver

i have found on abbuc-mag #40 a mouse-driver for

atari st mouse and amiga mouse... but what i dont like is:
it uses pokey-timerinterrupts which causes several difficulties in
a draw-editor...

is there any mouse-driver out there which works with

amiga-mouse
pc-mouse
atari st-mouse?

i know that amiga and st-mouse are incompatible... but to which
mouse-type is a normal pc-mouse similar?

is there any possbility to check by the program itself which mouse-type
is connected?

thanx, heaven/taquart

> it uses pokey-timerinterrupts which causes several difficulties in
> a draw-editor...

difficulties ? what a draw editor ? try use less frequency of pokey
for interrupts... We has written some time ago an editor, which
has been using mouse, and one and only thing which hadn't work
quite clear were DL & pokey interrupts togehter....

> is there any possbility to check by the program itself which mouse-type
> is connected?

there was a article in older TA (Tajemnice Atari, polish paper
magazine) whit explanation of that....

>atari st-mouse?

I wrote a mouse driver for the amiga mouse, but it uses some additional
hardware for that purpose - no pokey interrupts are needed, the mouse counters
are polled during the VBI. (Hence, much less CPU power is necessary!)
The hardware consinsts basically of two scaled binary counters
(for the mouse input) and two shift registers to read the
mouse pointers over the joystick input. I hacked several programs to work with
this mouse driver.

>i know that amiga and st-mouse are incompatible... but to which
>mouse-type is a normal pc-mouse similar?

None of the above. AFAIK the PC mouses come with a serial interface that
transmits the mouse position in some way similar to my hardware interface.

Greetings,
Thomas

They aren't as incompatible as many people think - only two pin are
switched, the working strategie is just the same.

Does an interface for a serial standard PC-mouse exist somewhere ?

>
> is there any possbility to check by the program itself which mouse-type
> is connected?
Should be no problem with ATARI/AMIGA mouse. Just set the default type
to ATARI, an AMIGA Mouse will cause strange results then .

Source record: 72393

Just playing around with Xlit 0.20 and I have noticed a GREAT deal of software does not run using the ATARIXL.ROM.. yet when I swtich over to the ATARIOSB.ROM and run under ATARI 800er emulation and turn off XE emulation a lot of stuff works (but the catch NONE of the software I am trying is ATARI 800 specific.. in fact some of it ONLY ran on an XL/XE which is very odd. (I tried POW, a commando style game that is 64k XL/XE.. runs fine under atari 800 mode but under XE mode it is distorted. And they are several that are like this. Any ideas?

Also, music in a lot of games runs slower than the normal speed but the animation is fine (when you speed up the frames/second) My question is, is the sound emulation purely based on the speed of the CPU (I am using a 486 DX33 with 24 megs of ram and so far everything runs at a decent speed, some things a little slower than the original 8bit, but overall I am very impressed. I wish I had more time to dabble in it. Sure brings back good old 8bit memories.

My compliments to Markus. Great job.

Alan

Error 164 is a file number mis-match and should be easy to rectify with any good sector editor. DiskFix from Shadow Software is especially useful for that task since it lets you change the file number as one of it's options. Any sector editor should do the trick though.

The Shadow

Your disk may be corrupted. There is an 800 ONLY version of MULE, but it
fails to load on XL/XE machines w/ the REMOVE ROM AT C000 message. Are you
using acracked file version?

In any case you can get a working XL/XE copy off the archives.

Intersting thought: Could atari revive support for the Jag by giving away
all the developer materials for free? I for one would consider it
fun to develop a game for a console system!

Shareware for the Jag? :)

I realize console makers might make a substantial profit selling licences
for development software, but wouldnt the interest generated by a large
influx of new software sell enough consoles for years to come?

Even if it required a soft of Jag-on-a-card for the PC, these should cost
less to make than a external jag?

Any thoughts? Do any of the consoles have PC based development systems or
do they all use scaled up versions of the console machines?

you got it. As I lived in the German Democratic Republic (GDR, ex-East Germany), Diskdrive were so expensive that (almost) nobody could afford it. Some clever hardware hackers constructed a system to manage atari's slow cassette system neraly 15-20 times faster! The programmed wonderfull programms like COS - Cassette Operating System. I still have this interface - I have two cassettes full of games, on each nearly 60-70 GAMES!!!

The term "vaporware" refers to hardware or software which is announced but
is never shipped. The product appears to exist for a while (at least in
the press) but later vanishes like a vapor.

Hope this helps.

Mark

Interesting idea, but I don't think it will fly.

For one, it's going to be next to impossible to DISTRIBUTE any software.

Jags are cartridge-based machines, so, even if you've written a great
piece of software, it'll be tricky to come up with the capital to make
a production run of cartridges, then you have to make sure you're not
left holding a bunch of unsold extras, or you'll be out of luck.

Perhaps distribution woudl be possible on the Jag CD--CDs are pretty cheap
to burn, but I'd estimate that the nubmer of Jag CD units out there is
pretty darn small.

Sure, it would be great if you could do it, but I doubt Atari would ever
willfully release proprietary information--they've always been super
secretive and ready to sue anybody for any infringement. Maybe now that
they've been taken over things are different...maybe.

"Vaporware" refers to computers announced but never released for full retail distribution.

For some models, only prototypes exist. For others, such as the 1400xl and 1450xl, a number of systems were produced but never commercially released.

: The Jaguar has two 64-bit RISC chips (Tom'n'Jerry), two 32-bit RISC chips
: and a 68000 for menial tasks such as joystick I/O. There's a number
: of copies of the Jaguar FAQ about somewhere - do a web search. :)

Slip of the brain - replace chips with `processors'.

Tom ; 32-bit graphics processor
64-bit `object' processor (pixel mapping etc).
64-bit blitter processor

Jerry ; 32-bit processor (sound and a few other things).

68000 ; 16-bit processor (low bandwidth I/O)

The FAQ does this much better - there's one at:

http://www.cs.ruu.nl/wais/html/na-dir/games/video-games/atari/jaguar.html

I visit this newsgroup every now and then. The last time I visited,
about a few weeks before, someone posted to this group saying that they
had scanned a feature article from the April 1985 issue of COMPUTE! and
wanted to upload it somewhere. If you are that person, or if you've
received the article from him, I'd appreciate an e-mail.

4924. FS/T: Antic Magazine disks $1.50 ea. shipped

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-13 00:00:00 UTC
From: mbates@s3.sonnet.com
Message-ID: <mbates-1306970159200001@ppp41-pac.sonnet.com>
Source record: 72409

I have the following Antic Magazine disks for sale. These are originals.
As always, I would prefer a buyout of the entire stack (and such an offer
will take precedence over any other deals).

Here are the months:
12/87
1/88 (someone has written "290" on it in black felt pen about 1/8" high)
3/88
4/88
5/88 ("345" same as above)
6/88
7/88
10/88 ("438")
11/88 ("440")
12/88 ("442")
1/89 ("445")
2/89 ("447")
3/89 ("449")
4/89
5/89
6/89
7/89
9/89
12/89 - 1/90 ("2 SIDED" written on it as above)

If you have some to trade I am looking for the 1983, 1984, or 1985
managizne disks.

If you want ALL of them I will take $22.00 and that will also covber shipping.

Thanks

Hey,

I am a begginer and I have a big problem. I had an ATARI 65XE few years ago so I try atari emulators. I use XL-IT v.20 on my PC (P5 etc.) and Pokey. I wanted to play my favourites games. I have NINJA.ATR , WORLD KARATE CHAMPION, but I can't run KARATEKA.ATR, - I see only introduction screen and scrolling text - that;s all !!!) OperationBlood.atr ??!! Why???? I use -nobasic option but it doesn;t help.

Other questions:

1) How can I save my simple programs in BASIC on HDD???
2) Where can I find : Bomb Jack, Kick Off, Pit Stop and ..... ONE ON ONE !!!! from EA !!!! This is the best game on ATARI !!!! ???

Please, help me!!!

4927. Re: Atari 64 Bit

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-13 00:00:00 UTC
From: ilaskey@cix.compulink.co.uk
Message-ID: <EBq8Bn.62p@cix.compulink.co.uk>
Source record: 72412

The Jaguar has five processors, which are contained in three chips. Two
of the chips are proprietary designs, nicknamed "Tom" and "Jerry". The
third chip is a standard Motorola 68000 used as a coprocessor. Tom and
Jerry are built using an 0.5 micron silicon process. With proper
programming, all five processors can run in parallel.

- "Tom"
- 750,000 transistors, 208 pins
- Graphics Processing Unit (processor #1)
- 32-bit RISC architecture (32/64 processor)
- 64 registers of 32 bits wide
- Has access to all 64 bits of the system bus
- Can read 64 bits of data in one instruction
- Rated at 26.591 MIPS (million instructions per second)
- Runs at 26.591 MHz
- 4K bytes of zero wait-state internal SRAM
- Performs a wide range of high-speed graphic effects
- Programmable
- Object processor (processor #2)
- 64-bit RISC architecture
- 64-bit wide registers
- Programmable processor that can act as a variety of different
video
architectures, such as a sprite engine, a pixel-mapped display, a
character-mapped system, and others.
- Blitter (processor #3)
- 64-bit RISC architecture
- 64-bit wide registers
- Performs high-speed logical operations
- Hardware support for Z-buffering and Gouraud shading
- DRAM memory controller
- 64 bits
- Accesses the DRAM directly

- "Jerry"
- 600,000 transistors, 144 pins
- Digital Signal Processor (processor #4)
- 32 bits (32-bit registers)
- Rated at 26.6 MIPS (million instructions per second)
- Runs at 26.6 MHz
- Same RISC core as the Graphics Processing Unit
- Not limited to sound generation
- 8K bytes of zero wait-state internal SRAM
- CD-quality sound (16-bit stereo)
- Number of sound channels limited by software

- Two DACs (stereo) convert digital data to analog sound signals
- Full stereo capabilities
- Wavetable synthesis, FM synthesis, FM Sample synthesis, and AM synthesis
- A clock control block, incorporating timers, and a UART
- Joystick control

- Motorola 68000 (processor #5)
- Runs at 13.295MHz
- General purpose control processor

Communication is performed with a high speed 64-bit data bus, rated at 106.364 megabytes/second. The 68000 is only able to access 16 bits of this bus at a time.

Wrong I'm afraid. The Jag has 5 CPUs. From memory I think 3 were 64bit,
one 32bit and 1 16bit. Check the Jag FAQ for info.

The kind of open system you're talking about doesn't seem to work finacially on game consoles. One od the reasons Atari crashed in '84 was the glut of crappy games that intruded toy store shelves. When Nintendo revived the game console business, it solved the problem by requiring Nintendo approval (and money) before a game was allowed to be put into a cartridge. Quality control of the game software made Nintendo the success it is today.

My cart list tries to point all of these out.

I could have sworn Demon Attack ran on my 130XE but now I will have to double
check.

These carts for sure are 400/800 only. There probably are many more.

Atari <none> 83 Kangaroo
CBS Software M8788 82 K-razy Kritters (by K-Byte)
Chalkboard Inc. 10031A-3 83 BearJam [ppt]
Chalkboard Inc. 10011A-3 83 Leo's 'Lectric Paintbrush [ppt]
Chalkboard Inc. Leo's Links [ppt]
Chalkboard Inc. 10042A-3 83 LogicMaster [ppt]
Chalkboard Inc. 10021A-3 83 MicroMaestro [ppt]
Chalkboard Inc. 10016A-3 Micro Illustrator [ppt]
Epyx 82 Monster Maze
K-Byte 81 K-razy Kritters
Koala AT00315-1 83 KoalaPainter [kp]
Roklan 09-01102 83 Gorf
Romox <none> 82 Attack at EP-CYG-4 (by Bram)
Synapse <none> 82 Chicken
Synapse <none> 82 Picnic Paranoia
Synapse <none> 82 Shamus
Synapse <none> 82 Slime

Coversely, there are games that only run on XL/XE systems, and some that
require 48K or 64K machines. I am trying to sort all of those out as well.

4933. For Sale: AtariWriter Cartridge

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-13 00:00:00 UTC
From: Rob Conder <rob@datasync.com>
Message-ID: <01bc7839$1bd5d9c0$434a84d0@Prob>
Source record: 72418

I purchased an AtariWriter Word Processor cartridge that I have no use for. I would like to sell it, cheap. (The lowest I will accept is $2.00+shipping.) I will take bids until June 20, 1997 at 12:00 AM. Then the cartridge will be sold to highest bidder. There will be no going once, going twice, gone stage. Highest bid before ending date take it.

Cartridge is in excellent shape. No box, and no instructions are included. The cartridge has ATATIRX8036 printed on the label. Copyright is 1982 Atari, Inc. It is a small metal and plastic grey colored rectangle, and Left Cartridge is printed on the end. Thanks for your time...

>mean GIF images created on an Apple II?

256 colours/lumnas combinations per image.GIfs that contain multiple images
could have a seperate palette per image.
(like in animations)

>>Colors and dimentions are often wrong.
>Of course they are, and there is little or no way around it because
>it is a hardware limitation. The two graphic formats you have
>available are Hi-Res and Double-Hi-Res, with odd resolutions like
>240x192 and 560x192. If you want to do color, your working with a

Since those are really 320x200 and 640x200 (with a narrow screen) you should be
able to view CGA pictures,though you'll have to scroll to see the whole image
or just decide what part of the picture to see.
(like viewing pictures on the Atari's 80x200x4096 mode)

>fixed palette, color bleeding and pixel placement restrictions.
>That brings you down to an awful 140x192 with either 6 or 16 (again,
>fixed) colors.

Isn't there a way to interlace screens on the Apple?
On the Atari,a 16-shade and 16-colour screen are interlace (shown every
1/30 seconds) to produce 80x200x256.(APAC mode)
And 80x200x4096 (16-level RGB) is done with interlacing a 16-shade red,blue and
green screen,each being shown 20 times per second.(Colourview mode)
Of course you'd be limited to a APAC-type display since you only get two video
memory buffers.

>Basically your going to get a _very_ fuzzy and distorted image in
>the end. If you stand several feet back from the screen and squint a

>Hyperspeed
>Developed by Len Spencer that Lets the MIO controll the flow.

I presume that you mean automatic flow control.Obviously the programme could
manually change the state of XMT,RTS and etc.
I assume you mean that if the buffer becomes full,that the handler automaticly
pauses the modem.Important if the term programme or BBS can't keep up.
For file transfers,this really wouldn't help since it could obviously keep up.
Now if the hardware itself (BB?) paused the modem then this would help out even
downloading.
(since if the software is fast enough to pause the modem,it could just as
easily transfer the byte.Software flow control is important when data is
coming in when the programme isn't reading any data)

You all know that if you can't run a game on the 1200XL,you could use a 800
OS translator disk.(unless the game needs 64k)
I don't know of any 800XL OS translator for the 1200XL.
Of course this is assuming that all games for the XL are backward compatible
with the 800.And rememeber that there are two 800 OSes,Rev.A and Rev.B.
I remember there being games that wouldn't run with the Rev.B OS that worked
with Rev.A.

Word has been received that this year's MIST Atari show will be held on Saturday, July 26, in Indianapolis, Indiana. The organizers say this show, the ninth annual, will be the final one.

This year MIST is moving to the Post Road Community Center, 1313 South Post Road, on the east side of the Indianpolis area. The new location is between I-70 and I-74, outside the I-465 circle freeway.

Show hours are 10 am to 3 pm, Indiana time. Admission is one dollar. In past years this show has had displays by vendors, hardware and software developers, magazine publishers, and users groups. All kinds of Atari computers and related products can be found at these shows.

Organizers of the show are: Charlie Sears (317-535-4829), csears at doe dot state dot in dot us. Jeff Hammer (317-244-8492), jghammer at indyunix dot iupui dot edu. Stu Huffman (812-988-7558), shuffman at doe dot state dot in dot us.

Upon doing a 10 second search using Magic Find, I found the following articles about the Armatron.

Analog Jul'86, p109 Wilmot, Ted "Arm
Your Atari" Hardware project to
interface a $30 Armatron robotics arm
from Radio Shack to your Atari. Project
costs $30 and about 3 nights of work.

Very detailed instructions. (ROBOTICS)

Analog Aug'86, p85 Wilmot, Ted "Arm Your Atari" Part 2 of this hardware project to have your Atari control a Armatron robotic arm from Radio Shack discusses how to build in feedback potentiometers on the arm. For 400/800 machines only.

Hope this helps!

Source record: 72443

Hi,

This is a Solicitation Email, we are looking for new TUFF'97 DISTRIBUTORS.
TUFF'97 is a promotional concept for a prospect follow-up system called
"Simple Track". Software designed for Windows 95, 3.11 and NT
machines. (Macintosh users read the NOTE below(*))

Concept:

The TUFF'97 software includes a copy of Simple Track, so you can use this
for your own personal administration (free). However, the TUFF'97 software
is designed to give you BIG TIME credits for just taking the efforts to
PROMOTE it.

How do I get those credits?. Easy, just distribute/promote it. How?
(Give away the software for free, put it on your website/homepage
and let everyone download it. Give it to your friends, attach it by
email etc). With a one time $40.00 (USD) validation code purchase,
YOUR name becomes part of all sofware you sent out to your customers.
When your TUFF'97 software gets validated, all your personal information is
automatically integrated in the software, so everyone knows how to reach
you by phone/fax or email and where to sent the check/money or cash orders.

Basically this is the concept. Offcourse you need the software to grasp
the whole thing. Believe it, there is absolutely no marketing knowledge
required, just ask for the software package, join and start promoting your
own TUFF'97 line. The only thing you DO need is a PC or Mac(*) and Internet.

(*) TUFF'97 is only available for MacOS users running Connectix VirtualPC
or Insignia's Sofwindows 95/3.11. A true MacOS version is not available.

When you're interested in becoming a TUFF'97 distributor and create your own
distribution line, sent a mailto:FiReStArTeR@frodo.com and ask for your
copy of the TUFF software (We'll sent you a download location and install
instructions). This is a serious opportunity, so only serious responses
are processed. If you're not interested, have a nice day.
Best Regards,
Tony Scott

> translator. I think you have a bad copy or something.

I'm not talking about using an emulator--Fix-XL is a program which runs
on the actual hardware. Boot it up, then put in the disk you want to
run and press a key to start booting the app. The problem here seems
to be that the game is expecting to see (or get input from?) four
distinct joystick ports when the 800 XL only has two.

4962. How do I extract files from an ATR image to a pc?

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-14 00:00:00 UTC
From: Fernando Ortiz <fernando.ortiz@mci2000.com>
Message-ID: <01bc78ea$cd9c8a80$b14537a6@default>
Source record: 72447

Hi

I'm able to use MYUTIL successfully to transfer files to-and-from pc and atari double density diskettes. But I can't get INT14 to extract files from an ATR image (from yogi site). It claims to do this, but I get many errors and refuses to do so. Is there another utility that will allow me to extract atari files from an ATR image on my pc? Thanks for any help.

Fernando

>Jerry ; 32-bit processor (sound and a few other things).
>
>68000 ; 16-bit processor (low bandwidth I/O)

Do you think that I was unaware of this? :)

I have talked with people who have programmed the Jag. The "graphics processor" and "sound processor" are custom 32-bit RISC architectures; the main reason that one is a sound processor is that it resides in the ASIC which contains the sound support stuff, likewise for the graphics processor. They are apparently pretty identical otherwise (same instruction set), and there aren't any significant restrictions on what each can do. The idea was that it would be natural for most games to let the sound processor do nothing but generate sound, but there is nothing to prevent programmers from using its cycles to compute 3D graphics, or whatever.

The "object" and "blitter" processors operate on 64-bit wide data because the system data bus is 64 bits wide, but they are not true microprocessors. Unlike the 68000 or one of the two 32-bit RISC CPUs, you could not write program code directly for them -- they are simply commanded by any one of the three general purpose processors to carry out

tasks. (Like copying pixel data around in RAM in the case of the blitter, or drawing text/sprites in the case of the object processor.) Calling one of these a processor would be like saying a 1040STe is a dual-processor machine because it has the ST blitter built in. Atari PR called them processors because they wanted it to sound more powerful and exciting, but really they are 2D graphics acceleration hardware.

In computer architecture the generally accepted definition of the "bitness" of a microprocessor has to do with how wide the internal registers are and whether there is a full set of instructions to operate on them at a given width. The Jaguar does not have any programmable microprocessor with 64-bit internal registers or instructions which implement all the expected 64-bit math operations, therefore it is not a 64-bit machine. It is a 32-bit machine with some 64-bit internal data paths. (Not at all unusual; PowerPC and Pentium processors are 32-bit machines with 64-bit and even wider data paths at various levels.)

Not that this is bad. The main purpose of going to a fully 64-bit CPU is to gain addressing space. 32-bit CPUs can address "only" 4 gigabytes. This does become an issue with really big UNIX server machines and the like, so there are a lot of 64-bit machines in that market. But 64-bit address spaces are hardly needed in a game console, so there is no real advantage to going to true 64-bit here. I respect Atari's Jaguar designers for sticking with 32-bit RISC pipelines; the machine was probably made cheaper and faster by not including pointless extra hardware capability. Probably the only reason that the N64 actually has a true 64-bit CPU is that Nintendo hucked wads of cash at Silicon Graphics to design the thing. SGI uses MIPS processors in its workstations (in fact SGI owns MIPS these days), so they did what comes naturally and used a MIPS R4x00 series 64-bit RISC, plus a SGI-designed 3D accelerator.

The only really odd thing about the Jag architecture was the inclusion of the 68000. The two RISC CPUs are more than sufficient to do everything, and I would bet that almost any game which uses them does not bother with the 68000. I have heard that it was put in only because some developers were uncomfortable with transitioning directly to the multiprocessor Jag architecture, and wanted to be able to just write simple 68000 code for games that would not need the full power (and more complex programming model) of the twin RISCs. Certainly the 68000 must have added some extra complexity and cost to the Jag.

4966. WANTED: Drive Enhancement

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-14 00:00:00 UTC
From: John May <xzarium.uk@virgin.net>
Message-ID: <01bc791d$2794b1c0$LocalHost@default>
Source record: 72451

Hi there all...

Wonder if you can help?

I require a 1050 or (XF551) drive enhancement ie. Super Archiver II etc etc.

Since the Atari Emulator came out for the PC I have been transfering all the games over but I have a massive amount in double density warp speed menus that I can no longer access. Although the XF551 is Double Density it just locks up when it reads the warp command.

In return I can either offer cash or supply you with one of my O.S. Controller Cards for the Atari XL or XE with all the software tools disks.

You may not of heard of this card as we never promoted it in the U.S. but in Europe it was the No.1 selling hardware add-on.

Also if anybody has Archon II I would be interested as my original has failed.

Regards John May

Hi everyone,

I'm not sure if the Atari Lynx is an 8-Bit or an 16-Bit System so this might be the wrong newsgroup...

Anyway, does anyone know if an Atari Lynx emulator is available? I think I read sonewhere that someone is working on such a project... If not, how do I use the Lynx files on Yogi's ftp-server?

Regards, Harald

I've seen a few times when I could actually recover my files, after a
little looking around on the disk. In one case, the sector kept referring
to itself, a loop.

However, 164 is usually, as you said, a terminal error. Don't hold your
breath if you even try to get it fixed.

-like this from everyone else who's annoyed with you.

that's partly my fault..... I did ask anyone that has questions about the archive, (of course, I meant questions that MAKE SENSE) to post it to me here in comp.sys.atari.8bit. I figured people would understand that we could all help one another, and more so many of the co-posters in this group.

Atari Classics had a do-it-yourself IDE interface in Issue #6 (April '97)
and a German (?) group has done a PBI unit that is IDE.
The best HD interface is the BlackBox from CSS, a SCSI unit.

Ditto for me 'n' my 800XL...

>These carts for sure are 400/800 only. There probably are many more.
>
>Atari <none> 83 Kangaroo

I ran a _disk_-based copy of Kangaroo on my 800XL the night before last. I
suppose it could be a DIFFERENT game by the SAME NAME, though. This one has
a rather blocky-looking (by today's standards anyway) kangaroo who has to
work his way up from the bottom of a puzzle-like screen while dodging items
being thrown by monkeys (also rather blocky; so much so, in fact, that I
mis-identified them as SPIDERS for a while before I realized they were
monkeys!)...

>Roklan 09-01102 83 Gorf

Wish I'd known that before I declared my Gorf cart "dead" and disassembled it
and threw the ROM away, nine or ten years ago... ;-)

>Synapse <none> 82 Shamus

Hmm... I have this one on disk too, and don't recall noticing it not working
on my 800XL. I'll have to check!

>Coversely, there are games that only run on XL/XE systems, and some that
>require 48K or 64K machines. I am trying to sort all of those out as well.

I think "Gumball" requires at least 48K...

Yogi (noone@nowhere.com) wrote:

: Yogi says: Let him do whatever he wants. He's almost as annoying at
: this point as Terry Ortman.

Makes sense, all right. I've usually just let his posts go by. However,
the big question is what everyone would do if he actually tries to sell
copies of the CD?

: The archive just IS. Why burn a CDR of it if its all over the net and
: takes less than 100 MB?

He'd also have to include all of the Umich 8bit stuff as well as stuff
from other places if he expects to fill a CD ROM with around 650 to 700
megs worth, doing what a couple other Atari-related CD ROMs did, by having
both the archive and the unarchived part on the same disk.

The Shadow claims to cure almost all error 164s (with dos 2.x and
derivatives) He probably can... just because I could never cure an error
164 doesnt mean it can't be done. It's just i was never able to fix it.

I know my answer is biased but I say go for a Black Box by CSS. You can't use SASI and SCSI interfaces, 256 byte sectors, paralel bus printer, RS232 stadnard modems (up to 19.2kBd) and other goodies. AND bob Puff is still in business.

Can't comment too much on the others ATR8000, IDE interface (yes there is one!) or the MIO.

My apologies if this has been covered before, but was there ever any program that allowed the transfer of the programming in an 8-bit cartridge game to a disk or tape for the 800 or 800XL? I have several old Atari 8-bit computer (not 2600) game cartridges I would like to do this with (if possible)for eventual transfer to a PC for use with an emulator like XL-it.

Thanks,

John Hale

this program can format and copy 5,25disks on pc in atari-format...
there is also a (serial?) cable availiable (xformer?),
but I dont know where?

My advice to you is to call Bob Puff at Computer Software services, and get an archiver in decent condition (with a warranty) and youll be helping out one of the few remaining hardware developers for the 8 bit.

The phone number is:

(716) 429-5639 orders
(716) 247-7158 fax
(716) 247-7157 BBS

5001. Price Guide Questions

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-17 00:00:00 UTC
From: ullera01@ctcnet.net
Message-ID: <5o4qh3$cq5@News.CTCnet.Net>
Source record: 72336

Hi folks,

I recently purchased a working Atari 400. It came with video cord and power cord. It also came with the Pac Man game. It did not have any manuals, joysticks, or any other hardware/software. I paid $15 which I didn't think was too bad. My question is: Is this a fair price or did I get ripped off?

I have the opportunity to buy an Atari 800. It works, comes with cables, but no docs or extras. I can get it for $25. Is this a fair price?

What would be a really cool way to answer these questions would be to have a "Classic Computer Price Guide" like they have for old cars. All makes/models of "classic" computers would be listed along with a rating which told the condition of the machine. Prices would then be given which indicated the accepted value. Such a thing could be an advantage for both buyers AND sellers.

If anybody knows of anything even remotely close to this, I would be grateful to find out. Thanks.

Art

There is a shareware program called Graphics Converter for the
Macintosh that will convert from GEM to many PC formats. (actually from
just about any format to any other format). See:
http://www.limkesoft.pingnet.de/

Henry.

: The Shadow claims to cure almost all error 164s (with dos 2.x and
: derivatives) He probably can... just because I could never cure an error
: 164 doesnt mean it can't be done. It's just i was never able to fix it.

There was a program out that I used, that was a regular sector-editor, I
forget the name, that did quite well. It would not only sector-edit, but
also undelete files, search for strings, copy the disk, and other things.

The problem with curing all 164s is that you have to know what you're
doing on the disk, rather than just letting a program do it. I was never
one to be satisfied with letting the program do it all. I wanted to be the
one to do it.

From: tagreen@aacvtc.com
Message-ID: <5o6581$qsa@argentina.earthlink.net>
Source record: 72345

I have an 800XL with a recently repaired mother board and I seem to still be getting no video source to come out of it. All I see on my tv is several black wavey lines. I have also replaced the switch box and 75ohm to 300ohm converter to see if that was the problem but no change. I am getting power, the power indicator on the unit is lit. Any suggestions out there as to what it could be??

tgreen@earthlink.net

both printers cost new $399.95 each, asking $100.00 for both of them.
Again, these sell, each $49.95 at Video 61.

ATARI 1050 Disk Drive, works with any Atari 8-bit computer, in very
good condition, like new, supports single and dual density modes,
includes power supply, original cost $179.95, asking $75.00. These
sell at Video 61 for $74.95, same price.

Data-Que Turbo-816 upgrade for Atari 8-bit, XL or XE series computers.
Upgrades and replaces the 6502C in the computer with the 16-bit 65C816
CPU, can use Atari OS, or the NEW Turbo-OS included. Speeds up
programs as much as 350% faster. The 65C816 processes 4 instructions
per clock cycle (Only the new P6, 80686 Intel chip does that, besides
this), as compared to the 6502 which processes one instruction per
clock cycle. Original cost $249.95. Includes T816 assembler $75.00,
Cross Developer for IBM $75.00, sevreal other Turbo 816 specific disks,
valued at $25.00 each. Asking $250.00 for the entire package. These
are not currently available anywhere else that I know of.

ATARI 800XL upgraded to 256K memory, will run most 130XE specific
programs, already wired for Turbo-816 installation, just need to
re-solder 3 jumpers, and plug in the Turbo-816 kit above. Original
cost $189.95 for the 800XL, $79.95 for the Upgrade kit, $65.00 for the
256K DRAMs, asking $125.00. Video 61 sells the USED 64K model for
$59.95.

Supra External 2400 Baud Modem, includes powewr supply, no manual,
Hayes Compatible, requires 850/P:R:/ATR8000, asking $30.00

MUST SELL, will consider any reasonable offers on this equipment.

Send orders to:

STARFLEET SOFTWARE Company
1037 West Leafland Avenue
Decatur, Illinois 62522-1537

I have the following Atari 800 items for sale in the Shadyside section of Pittsburgh.

Atari 800 (dead) and power supply
Atari 1050 disk drive and interface cable (condition unknown)
Atari 1027 printer (condition unknown)

Since the Atari 800 doesn't work, I can't determine the condition of the other items although the physical appearance is just fine. The Atari 800 would be a great source of parts if nothing else.

I'd prefer to sell everything to one person. Make me an offer of what it's worth to you.

Send serious inquiries to me at dave@Hellfire.DUsers.Drexel.edu.

-Dave Slotter

Next up: An auction of Star Raiders.

A good game, to be sure, but it's the Combat of the Atari 8-bit
world. But *this* Star Raiders cart is Extremely Rare, since it's
the only copy in existence on which I ever wrote my name in permanent
black ink...

If you can boot DOS with the cart in (normal language carts for instance), you can can copy the cart to disk by doing a binary save from DOS of the cart address range ($A000 thru $BFFF for 8k; $8000 thru $BFFF for 16k). The image file can be run as is by an emulator that can load cart images.

Carts that prevent DOS from loading (i.e., games) cannot be copied this way. However, there are a number of programs both commercial (The Pill, The Impersonator, others) and noncommercial (DMPCRT from Compuserves 8-bit library, and others) which can. Techniques vary, but often it involves inserting the cart after booting and starting the copy program--not for the faint-hearted :-). Also, the commercial products usually prepend or append some extra code which must be stripped out before using with an emulator. The commercial ones tend to be more reliable in my experience.

Note: Many of the later carts used bank-select techniques and cannot be copied using the techniques outlined above. It's presumably possible, but I personally don't know how. Rainbow (Mac or Windows) can run (at least) OSS SuperCarts which used this scheme.

Mark

5021. ST to XE

Hi all!

I have the chance to get an original Atari 5 1/4"-Discdrive for the ST.
I want it for exchanging files between my STe and my 130XE/800XL, but I'm not
sure if this is possible ... :(

So does anyone know if there's a program that makes exchanging files possible?
Is it possible to write the 8-Bit-disc-format with a ST on a 5 1/4"-disc?

Thanx for an answer :)

5022. Atari show on July 26

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-17 00:00:00 UTC
From: david moeser <erasmus@one.net>
Message-ID: <Pine.LNX.3.95.970617042148.23827A-100000@shell.one.net>
Source record: 72357

Word has been received that this year's MIST Atari show will be held on Saturday, July 26, in Indianapolis, Indiana. The organizers say this show, the ninth annual, will be the final one.

This year MIST is moving to the Post Road Community Center, 1313 South Post Road, on the east side of the Indianpolis area. The new location is between I-70 and I-74, outside the I-465 circle freeway.

Show hours are 10 am to 3 pm, Indiana time. Admission is one dollar. In past years this show has had displays by vendors, hardware and software developers, magazine publishers, and users groups. All kinds of Atari computers and related products can be found at these shows.

Organizers of the show are: Charlie Sears (317-535-4829), csears at doe dot state dot in dot us. Jeff Hammer (317-244-8492), jghammer at indyunix dot iupui dot edu. Stu Huffman (812-988-7558), shuffman at doe dot state dot in dot us.

Atari 8-Bit Computers

Vendors and Developers List

"A comprehensive list of vendors, developers, publishers,
and repair shops for Atari 8-bit computers and their users"

Additions/suggestions/comments/corrections are needed! Please send to:

Michael Current
mailto:mcurrent@carleton.edu

Please refer to the latest version of this FAQ list whenever possible!

Available via these locations and Usenet FAQ archives everywhere:

http://www.faqs.org/faqs/atari-8-bit/vendev/

ftp://rtfm.mit.edu/pub/faqs/atari-8-bit/vendev

news:comp.sys.atari.8bit news:comp.answers news:news.answers

Or you can always ask me for a copy at mailto:mcurrent@carleton.edu

------------------------------

Subject: Introduction

Conventions
-----------
All commercial vendors, developers, publishers, and repair shops should be
listed here. "Major" PD/freeware/shareware developers should also be listed.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No product can be developed by more than one
developer. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete
subscription or ordering information should be given, including prices.
```

"Repair Shop" = Can repair many 8-bit Atari and related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

When writing to request catalogs, it's always a good idea to include a Self-Addressed Stamped Envelope. When writing to foreign firms, try enclosing a couple of International Reply Coupons (IRC's) as well.

Super-Brief Copyright Primer

Commerical software - protected by copyright, may not be copied except for personal archival purposes
Shareware -protected by copyright, may be freely copied and distributed, shareware payment required for continued use
Freeware - protected by copyright, may be freely copied and distributed, no payment required for continued use
Public Domain software - NOT protected by copyright, anyone may do anything with it, period.

Software is protected by copyright from the moment of creation. No copyright notice is required for copyright protection.

Software does not enter the Public Domain unless explicitly released to the PD *by the copyright owner*. If there is no copyright notice, software must be considered Freeware rather than in the Public Domain.

My article "Intellectual Property Protection for Computer Software" appeared in Atari Classics, 3(1), 1994, pp. 4-7, or see:
http://www.library.carleton.edu/staff/michael/acarticle.html

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

I collect information for this list from wherever I can find it. While most updates to this list come from you, the user of the list, I'd like to recognize a few of my more prominent sources:
- Atari Classics, published by Bob Woolley
- New Atari User, published by Page 6 Publishing (Les and Sandy Ellingham)
- Classic Computing, published by the Historical Computer Society

"Hi!" to Marek Tomczyk, who has supplied so much information from Germany.

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Atari items for sale. I'll pay one half the shipping and handling costs
but NOT the C.O.D. charge. If you don't believe the prices are fair I am
willing to listen to your offer. Enjoy!

1) The Hitchhiker's Guide to the Galaxy --Infocom text game. Original box
and manuals. Check it
out the props are still in the box! Price $5 SOLD!

2) Flight Simulator II --subLogic flight simulator. Original box and
manuals. Including the
nav charts. Price $10

3) AtariWriter and Atari Proofreader --the classic word processor and a
dictionary program.
Original manual including the quick reference sheet for the AtariWriter
but no documentation for
the Proofreader and no box. Price $20

4) Movie Maker --an animation construction set by Electronic Arts.
Original manual and box.
Price $10

5) 5"1/4" Lockable Disk Organizer with disks and key! --a grab bag of
software everything from Antic Magazine
disks to games like Mail Order Monster and Summer Games both classic 80's
computer games.
Price $20

6) Atari 1010 Cassette drive --not sure if it works but power supply and
light seems to work. Also
included is the data cable and a conversational French program. Has sound
and original box and
manual. If anything this is the first multimedia device for the Atari!
Price $10

7)Atari 1027 Daisy Wheel printer --not sure if it works but power supply
and light seem to work.
Also included is the data cable. Price $10

>joysticks, or any other hardware/software. I paid $15 which I didn't think
>was too bad. My question is: Is this a fair price or did I get ripped off?
You got reamed, man. I wouldn't pay a dime more than $14.50 for a 400,
unless it had E.T. in the cart slot.
>
>I have the opportunity to buy an Atari 800. It works, comes with cables, but
>no docs or extras. I can get it for $25. Is this a fair price?
No extras? Another rip-off. I think they should throw in a couple
dozen ER carts, and a dozen bagels.
>
>What would be a really cool way to answer these questions would be to have a
>"Classic Computer Price Guide" like they have for old cars. All makes/models
>of "classic" computers would be listed along with a rating which told the
>condition of the machine. Prices would then be given which indicated the
>accepted value. Such a thing could be an advantage for both buyers AND
>sellers.
>
>If anybody knows of anything even remotely close to this, I would be grateful
>to find out. Thanks.

Great Idea. For a start we know that:
$14.50 is fair for a 400.
$25 is fair for an 800 w/extras.

From: dastar@crl.com
Message-ID: <5o81k2nde2@nnrp1.crl.com>
Source record: 72362

Collector's Book Sale!

I've decided to share a recent used bookstore find with other collectors of vintage computer stuff.

These are all books published by Franklin Watts in a series called "Computer Literacy Skills". All the books in the series were written by Christoper Lampton. They are hard bound with paper covers. The books themselves are in mint condition, but the covers range from mint to very good (some tears). They are all copyrighted in 1984/1985. The best books will be sold on a first-come, first-served basis. These are really nice books, and I am keeping a set for myself.

The titles are:

Graphics and Animation on the TRS-80 Models I, III and 4

Graphics and Animation on the Atari 800, 400, 1200XL, 800XL, and 600XL

Graphics and Animation on the Commodore 64

6502 Assembly-Language Programming for Apple, Commodore, and Atari Computers

Z80 Assembly-Language Programming for Radio Shack, Timex Sinclair, Adam, and CP/M Computers

PILOT for Beginners

FORTH for Beginners

I have a total of 38 of these books in different assortments. I am selling each book for $4.00 each. Buy all seven titles for $24.00 (in other words buy six and you get one free).

All books will be shipped in a protective cardboard container to preserve their superb condition. Shipping charges are bourne by the buyer.

If interested, please send e-mail to dastar@crl.com for more information on ordering and shipping charges.

I haven't actually seen an ATR8000, but I understand it needed an
optional interface board to connect hard disks. If I'm not mistaken,
the ATR was connected to the SIO port and would be no faster than an
Atari floppy drive. The best interface would probably be the Black
Box from CSS, if it is still available. Bob Klaas sometimes reads
this newsgroup; he might sell you a K-Products interface. Then there
is the SIO2PC, which lets the Atari use the hard drive in a PC.

Hi,

For those into Atari and wanting new and fresh images of never
before seen Atari product prototypes and vaporwares, please stop by and
check out this web site. Last night several new images were added such
as a never before image of peripherals for the Atari Graduate keyboard
like: Wafer Drive, Modem, RAM expander, Thermal Printer. Images of
the 5200 "System X" prototype and cartridges. Also many many unseen
images of other Atari items such as rare 8-bit computers, ST prototypes,
stand alone systems, even an Atari California License Plate! Stop by
and take a look and the would been, could been of Atari....

I use Omnimon (for everything, it seems). Since it becomes the OS, you put the cart in and boot into omnimon, just dump the memory.

To dump bank select carts requires a program to switch the bank and dump it to disk which can later be loaded back in and saved to work in the emulators. I havent gotten this to work yet, however. No one has been able to nail down how to switch the banks, and I have no need for basic xe on the emulator anyway, since I can use it on my 800xl.

I don't think it's possible to do what you want. However, there is a
cable/software package called TariTalk which connects to the 8Bits joystick
port and the MIDI-IN on the ST. It used to be available from Page6. Hope this
helps.....

-----BEGIN PGP SIGNED MESSAGE-----

Their obnoxious censorship made me give up on console games entirely.
It always seemed to me that the so-called 'Seal Of Quality' meant some
censorship alongside whatever other issues they may have had in mind,
like playability or graphics. Most Nintendo games are so...Disney. I
can see the fragging death in a N64 version of Doom....not! There is
a glut of crappy game software for Macs and PCs. Does this make
people reluctant to play games on PCs? Not really.

The 7800 was the last console Atari had. A glut of "crappy third
party software?" did not kill it. Other than the fact that the
Tramiel Atari wouldn't make more than a halfhearted attempt to market
their products, it was being tightly closed that killed the 7800.
Atari used an encryption algorithm in the 7800 operating system that
cartridges had to conform to or they would not work. I have no doubt
that any prospective third party developer had to pay BIG bucks to be
let in on the secret.

The point is, it is ESSENTIAL that PCs and game consoles have open
designs to be a success. Who came out with the most cool software for
the 2600? Without a doubt, Activision and Imagic consistently had the
games with the most innovative sound and graphics. Atari published
titles tended to be dull in comparison. If the 2600 was closed there
probably wouldn't have been an Imagic or even an Activision for all
that it was made up of ex-Atari programmers. Atari COULD have stopped
them legally.

It was the early closure of the Mac that is making so much trouble
for it today. It was the open PC with it's glut of "crappy" add-on
cards and software that is the clear winner in the marketplace (Please
spare me long florid descriptions of how good the Mac is, it isn't the
point.). Closed systems are LOSERS.

I have the following items for sale:

Hardware:

Atari 1025 printer, 7-pin dot-matrix, connects directly to SIO port. $15

DEAD Atari 1050 drive, not working, for parts only. $5

Okidata Microline 182 printer, 9-pin dot-matrix. $12

Software: (includes box and manual unless otherwise noted.)

Plattermania, cartridge. $4
Gorf, cartridge, for 400/800 only, will not run on xl/xe. $3
Silent Service, disk. $5
Music Construction Set, disk. $5
Verb Viper, disk, no box or manual. $2
Math Blaster, 2 disks, Atari or C64, no box or manual $3
Choplifter, disk, no box or manual. $3
Mind Mazes, disk, no box or manual. $3
Analog Magazine Disk No. 73 June 1989 $3
Print Shop Companion. $10
Print Shop, disk only, no box or manual. $4
Print Shop Graphics Library Disk No. 1 $3
Silent Butler, 2 disks, manual, no box. $4
Timewise, disk, manual, no box. $4
Partyware, 2 disks, for Atari or C64, no box or manual.

Manuals/books: $3 each

1050/DOS 3
Introduction to Disk Operating System (DOS 2.0)
DOS 2 Reference Manual (DOS 2.0s & DOS 2.0d)
1050 Owner's Guide
800XL Owner's Guide

Prices do not include shipping. All prices are in US dollars. I believe my prices are fair but if you disagree please make an offer. I am in Dayton, Ohio. Please reply to bx557@torfree.net.

->I recently purchased a working Atari 400. It came with video cord
->and power cord [and also] Pac Man game. It did not have any manuals,
->joysticks, or any other hardware/software. I paid $15 ...
->Is this a fair price or did I get ripped off?

At a big computer show half a dozen years ago I was in a charitable mood so I paid a starving Atari vendor four bucks for a 400. It had a cartridge in the slot, so since I figured the cart was worth a dollar that effectively reduced my outlay for the 400 to $3. But that was half a dozen years ago! Based on what I've seen at various shows since then, I'd peg the fair-market value of a 400 with 16K at between ten and 25 cents. Since your video cord should be built-in, your game cart's worth $1, and the power supply is worth at least $4, you've got $5.25 value. Look at it this way: You only lost $9.75. (Incidentally, I've since given away that 400.)

->I have the opportunity to buy an Atari 800. It works, comes with
->cables, but no docs or extras. I can get it for $25. Is this a fair
->price?

No. I've seen 800s priced at $5 piled up at shows for years now and nobody ever buys them. (The best one can say is that with that flat top they stack nicely.) For $25 you can expect to get either an XL/XE or lots of additional stuff with the 800. Look around in Goodwill stores, flea markets, hamfests, or computer shows and eventually you'll find better deals.

->"Classic Computer Price Guide" ... If anybody knows of anything even
->remotely close to this, I would be grateful to find out.

Look at all the lists of stuff for sale on this newsgroup. I won't call the prices "sky-high" -- I'll simply refer to them tactfully as "list price." The real-life market value is usually one-half, or one-fourth, or one-tenth, depending on the item and the price. I'll admit that this won't help you much, but it's something. (In other fields some price guides show market prices and some show list price. I know of other fields where the ratio between the list price shown in the standard "value" guides and the actual market value can be as much as ten to one, so such a ratio isn't unheard of. One should always expect "list prices" to be on the high side.)

I recently picked up a bunch of Atari related stuff in a package deal and want to sell off the stuff that I do not want. All the prices are very reasonable and I just want to get rid of the stuff.

All the following items for sale have the Shiping and handling included in the price and are sold as is.
All sales are for the continential U.S. only.

Atari 400 16k computer w/power supply-.: I hooked it up and the Atari Memo Pad comes up and works and all the keys on the keyboard work. All the Carts that I own are for my XEGS and require 48k, so I could not check to see if the cartridge port works. The computer is in excellent shape and I'll throw in an Atari joystick.
Price: $15.00

Wico Command Control Joystick: Works and in very good shape.
Price: $5.00

Tron Joystick by M Network: This Item is very cool and hard to find, works and in good shape.
Price: $10.00

Pair of 7800 Joysticks: both work and are in good shape.
Price: $5.00

ONLY AVAILABLE IN THE:
U.S.A, CANADA VIRGIN ISLANDS, AND PUERTO RICO

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax,
pager, voice-mail, and cellular numbers and give them your New "Virtual Office"
800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone?
Wouldn't it be nice to be able to give everyone just ONE phone number that
will find you anywhere you are? Even out of town, or in a restaurant, or even
on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving,
Even without a fax machine! E-Mail Notification and Delivery, Without a PC!,
Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888
Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice
Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial,
Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection,
Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web sight:
http://www.mynumber.com

* Based on our best priced plan.

Thomas,
Locate a copy of ST Xformer (try http://www.emulators.com) and build or buy the XFormer cable for the ST. Instructions are available at Emulators.com. You can then use the ST and a real 8-bit drive to transfer file directly to the ST.
Another way is to use a communications program that supports y-modem batch for the ST and the 8-bit and connect them with a null-modem cable. Simple file transfer is easy. It's the same as up/downloaging files to/from a BBS. This methode is slow, but works fine. I do it all the time.

I totally agree that PCs need to be open to be a success. I remember when TI tried to control what software worked with the TI99/4. Terrible idea.

I disagree that it is essential that game consoles have open systems to be a success. Do you think Nintendo has been unsuccessful over the years? and Sega? If so, then we'll have to agree to disagree on the meaning of success.

Later...

I think most carts take advantage of the cartridge control line to do
bank switching. You should be able to implement a bank switch with
just one latch IC that way, very cheeeeep :)

I was thinking of doing just that and putting a bunch of my favorite carts
on one multicart.

5048. Atari Computers For Sale!

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-19 00:00:00 UTC
From: bensmith@linda.teleport.com
Message-ID: <5ocja8$b92$1@linda.teleport.com>
Source record: 72283
Cross-posted to: pnw.forsale,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

I've been recuperating from serious depression & treatment at a Mental Hospital. I've still got bills to pay, so I'm going back to work in a limited capacity. Selling Atari in the U.S. I can handle. But for now, I'm cutting back on selling abroad as it's hard enough when I'm in good shape. So I'm dealing with depression in the usual way. 1) Don't make promises I can't keep. 2) Only set goals within my reach. 3) Commit myself to taking weekends off and keeping my mind off of work. Lessons we could all learn.

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

I own the Black Box by CSS and am in love with it. There are alot of
old 272m and 424m SCSI externals floating around used for old UNIX
machines. These just PLUG RIGHT IN. No hassle. Also, the parallel
printer and standard modem options are great. I transferred all the
stuff from my PC that I got from Yogi to the SCSI drive and now I have a
nearly complete Atari software set on one SCSI 320. Also, the ability
to set up to 96 small partitions as virtual floppies makes game play
awesome!!! Finally, the Floppy Board is an add-on to the black box that
lets you use an external 1.44 floppy drive on the Atari.
Unbelieveable!! The Black Box is the only way to go. Bob Puff is real
gentleman too. Excellent product Get it NOW!!

Try not using the RF output. Instead, find a cable that breaks the 4
pin DIN into it's audio and video signals. You can get the parts at
Radio Shack to make one if you can't find one.

Why waste your time. There is nothing you have on cartridge that isn't
available as an XFD or ATR ready to run in the emulator. See Yogi's
sight.

Hi all!

What would you say is the best terminal-proggie for an Atari 130XE.
It should support 19200-modems (with black box) and should be VT100/102.
Any suggestions?

For Sale / For Trade

Want list at bottom of post.

Items listed in this order:
C-64 Educational Carts
C-64 Game/Utility Carts
Atari Computer 400/800/1200 Carts
TI 99/4A Carts
Channel F Carts
Atari 5200 Carts
Atari XE Carts
Arcadia Carts
Colecovision carts
Apple 2 software

Prices are negotiable, and offers that mix cash and trade
are welcome. Prices do NOT include shipping, which is almost
always via US Postal Service (you pick the priority and packing).

C-64 Educational

Sesame Street: Ernie's Magic Shapes $3
Includes box (some wrinkling of plastic),
Game Play and Activity Manual, and
cartridge (good condition).

Sesame Street: Letter Go Round $3
Includes box (some wrinkling of plastic),
Game Play and Activity Manual,
How to Play summary card,
plastic keyboard overlay, and
cartridge (good condition).

Sesame Street: Big Bird's Special Delivery $2
Includes cartridge only (near-mint condition).

Fisher Price Number Tumblers $2
Includes box (squished), manual,
Registration Card, and cart (OK condition).

CBS Software Ducks Ahoy! $4
Includes box (some wrinkling of plastic),
Game Play Manual, Ducks Ahoy! Book of
Silly Duck Stuff, cartridge (good condition)

Spinnaker ALF in the Color Caves $3
Includes box, manual, cartridge (OK condition)

Spinnaker Story Machine $3
Includes box and cartridge (OK condition)

Spinnaker Kinder Comp $3
Includes box, manual, cartridge (OK condition)

C-64 Games
Untested

Super Smash P/N C64622 $10
Cart only; label is typed, case is standard Commodore.

UNKNOWN from Hesware $2
Something without a label. Cart Only.

Pitfall II $5
Shrinkwrapped.

Partner 64 $6
Cart Only; button and foot in good condition.

IDSI's Rack 'em Up! by Roklan Corp. $3
Cart only; label doesn't appear damaged, but
doesn't really fit the cart well either. Red
dot (sticker) affixed. Vibrant yellow cart.

Atari 400/800/1200
Untested; look to be in good condition

Atari -- Pilot Programming Language $10
Missile Command $1
Telelink I $3
Big Five -- Miner 2049er $2
Microbits Peripheral Products -- Smart Terminal $5
Thorn/EMI Video -- Kickback $3
Soccer $3
unlabeled cart $1

TI 99/4A

Untested; handwritten labels could be incorrect and
I wouldn't know it.

Donkey Kong $4
Reading Fun 2A $1
Alligator Mix $1
Disk Dup (handwr. label, Chip 3 label as well) $5
(unlabeled) $1
Sneggit (handwr. label) $2.50
MASH (handwr. label) $2.50
Microsurgeon (handwr. label) $2.50
Slymoids (handwr. label) $2.50

Star Trek (handwr. label) $2.50
Facemaker (handwr. label) $2.50

Channel F
Untested; all look fine except #2 which is missing end label.

1 -- TicTacToe, Shooting Gallery, Doodle, Quadra-Doodle $1
2 -- Desert Fox, Shooting Gallery $2
5 -- Space War $3
13 -- Robot War, Torpedo Alley $4

Atari 5200

River Raid $3
Kaboom! $3
Space Dungeon $1.50

Atari XE

One-on-One $3

Arcadia

Jungler $4

Colecovision

River Raid $3
Pitfall! $3

Apple 2
On Disk with manuals, box, etc:
Temple of Apshai Trilogy $2.50

Condition: All labels are intact (except the UNKNOWN
and handwr. carts, of course). A few have some defects,
but just minor ones unless noted.

Wanted:

Atari Light Gun (XE or 7800)

7800 carts: Ace of Aces, Alien Brigade, Basketbrawl, Crack'ed,
Desert Falcon, F-18 Hornet, Fatal Run, Ikari Warriors,
Impossible Mission, Mario Brothers, Midnight Mutants,
Motor Psycho, Planet Smashers, Pyromania, Rescue on
Fractalus, Sentinel, Super Huey, Tank Command, Tomcat
F-14 Flight Simulator, Water Ski, White Water Madness,
Xenophobe

Also looking for ER 2600 carts.

Please do not include shipping in your offers -- the
purchaser pays the actual cost, nothing extra. I
normally use US Postal Service and padded mailers.

References available on request. Contact me at
jdixon@ruf.rice.edu
with offers, questions, etc.

Send Date: Wednesday, December 31, 1969
8:00 PM
Attach:
Certify: N

For various reasons I won't get into detail here
(but mainly scheduling
related and the fact that Gemulator brings in far
more money than Xformer) I
won't be releasing it as a separate commercial
product. It's being rolled in
to the Gemulator 97 product so that one product
does Atari 8-bit, Atari ST,
and Mac emulation in one product instead of trying
to market 3 separate
products. People who wish to buy a Windows version
of Xformer will be able to
buy Gemulator 97 this summer, or else keep using
the free 3.6 version which I
made freeware simply because I didn't have the
time to keep supporting it as a
commercial product. People who sent in a disk for
an upgrade to Xformer 96
either got a pre-release beta of Xformer sent to
them in November, or their
disk is still here and what they'll get is a

Gemulator 97 disk this summer.

Also, please note that a bunch of the people on
the net who are complaining
about not receiving either Gemulator 96 or Xformer
96 update disks didn't
follow the upgrade instructions - they didn't
respond by Nov. 15th, or they
didn't send back their old disk, or they didn't
include a return disk mailer,
or they didn't put return postage on the mailer,
etc. and those people simply
will not receive an upgrade, no apologies. Maybe
this summer when I have more
free time I'll go through the pile and send those
people upgrades anyway, I
don't know.

The web page should make things clear. If it
doesn't, I'm sorry, but again at
this point you're looking July or August for the
Gemulator 97 release.

Subject: PCXformer for Win95

Darek,
What happened to the Win 95 version of PC
Xformer? I can't find any
reference to it anywhere on you web page anymore.
I'd really like to get
my update as I sent in the v3.0 disk way back in
October ('96). I have
downloaded the 3.6 version and really like it. I
am running it from an
Iomega Zip drive. Works great! I know many who are
curious about the
Win95 version from comp.sys.atari.8bit. Please
make some sort of
statememt in that newsgroup as to the ststus of
this product.
Eagerly waiting...

And if all else fails, and you're sure you have the channel set
correctly, maybe you need a known good 800XL to narrow the problem
down. I'm sure I can dig a good one up out of this mess. You can have
it for the shipping cost (probably about $8), but don't put me to the
bother of packing it up if you don't really feel you need it. James.

ONLY AVAILABLE IN THE:
U.S.A, CANADA VIRGIN ISLANDS, AND PUERTO RICO

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax,
pager, voice-mail, and cellular numbers and give them your New "Virtual Office"
800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone?
Wouldn't it be nice to be able to give everyone just ONE phone number that
will find you anywhere you are? Even out of town, or in a restaurant, or even
on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving,
Even without a fax machine! E-Mail Notification and Delivery, Without a PC!,
Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888
Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice
Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial,
Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection,
Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web sight:
http://www.mynumber.com

* Based on our best priced plan.

Ok,

I just got into re-collecting all my old Atari games for my emulators... I have a few questions if any of you know-it-alls could help... :)

which extentions run with which emulators?? I can run the .atr files, but I can't seem to find any sites with them... are they illegal? what about the .arc files? will they run with xformer? I found a killer site, but all the files are in .exe form... they won't run with xformer.. do I have to transfer them to a different kind of file? What are the legalities around archiving all this old stuff? can I create my own files and transfer them without fear of recompense?

Does anyone know a good site with .atr files? or .xfd files? And lastly, I can't seen to get on the server with XL-IT (which I hear is the best) and I can't find it anywhere... if anyone could e-mail me xl-it version .20 I would appreciate it...

Everyone has been real nice about helping me and I really appreciate it... I guess the usenet is good for somehting other than collecting dirty pictures... :)

J-me

Yes, well, it's high time you stopped that nonsense, anyway. ;-)

Most of the answers you're looking for can be found in the "Atari 8-bit New User, Emulator Help FAQ" (http://zippy.sonoma.edu/~kendrick/nbs/new_and_emu.html).

The ".exe" files you refer to are most likely Atari 8-bit programs intended to be run from DOS on an Atari or emulator (not to be confused with MS-DOS programs, which also use the same extension). Some emulators can run these directly, but usually you need to get them into a disk image (usually an .atr or .xfd file on PC, Mac, ST, Amiga or UNIX boxes). You can also transfer the .exe file to a real Atari and run it there.

I just checked the XL-IT site and also was unable to connect. I was just there earlier this week, so it's probably just some technical glitch. I would wait and try again later. (BTW, I tried linking to the XL-IT site from the FAQ mentioned above and ran smack dab into an "access denied" page. It's a different URL than the usual one. Don't know what the deal is with that.)

Good luck!

Mark

Again, another CSS plug, and another bias answer. Bobterm is the only way to go.. Can;t remember if it supports those emulations you want, but I know it 9600 bd for sure, and even 19.2kbd with a proper patch.

The highest Bobterm version I ever used was 1.22.. not sure if anything newer came out.

i heard a Zmodem file protocol patch was released for it? Anybody comment on that?

Alan

Its a damn shame that in over 100 internet newsgroup transactions.
involving the NeXT, Mac, PC, and Atari community.
along with Vectrex and classic video games.
The only times i have been ripped off...every time ... 3 times now.
its by someone in the ATARI community.

WHAT GIVES HERE ??

Eric Cron \ I HOPE I GET TO MEET THESE TWO FUCKUPS SOMEDAY IN PERSON !!
Pat Barnes /
Mike Babcock..at least mike..has made efforts to slowly repay his debt.

its no wonder ATARI went under,, buncha thieves and Pirates abound here.

am i PISSED OFF>.....DAMN Right.

ok, I ADMIT, theres some nice folks here too.

Thomas Havemeister (peter@soemtron.sb.sub.de) wrote:

: and what do you changed on disk?

Well, what I did was made a backup of the disk, then went ahead and use the backup to see if I could get the stuff back.

The last three bytes of the sector tell you what's next. You have the file number, next sector number, and how many bytes in that sector. In most cases, the next sector number was modified, or the file number, in some rare cases. There were times even I screwed up, but you have to know how many sectors the file takes up, and go from there. Divide by 125 for single density, 253 for double density, taking into account those last three bytes.

Finally, once you get the file back, copy every good file on that backup disk to a blank disk. Keep going til you can't get any more files back, if there's more than one. That blank disk that now has the recovered files, use it as the original disk.

Jeez... I can't believe I remembered all that... Also remember that sector 360 is the VTOC, and 361-366 or 367 are the file tables, the directory sectors. There was a way to change a file so it won't show up, but rather, it's there, taking up space. If I'm remembering right, the normal flag was 42, and changing it to 43 would make it a hidden file.

A former college roomie and now old friend sometimes regale each other with the constant pranks we played on this guy who constantly bothered us. We were hiding his files all the time, and he never figured it out, even after an entire year of us doing it to him. We even went so far as to give him the software we used, and he *STILL* didn't figure it out.

A hard drive interface card was optional for the ATR8000, its been a while
but if I remeber correctly, it was a SCSI connection.

5077. FS/T: Atari 8-bit computer items [06/21/97]

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-21 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <33abaa5b.15557341@nntp.ix.netcom.com>
Source record: 72311

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *before*
asking any questions, or placing any orders. Thank you!

This list was last updated on 06/21/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site, including 52 for the Atari 8-bit computers!

I have the following Atari 8-bit software, hardware, and accessories
for sale or trade.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

SOFTWARE:

NOTE: If the company name isn't listed, then the game was released
by the same company as the system.

NOTE: All cartridges are loose (ie. without box and manual), unless
specified.

NOTE: Since all cartridges are used, some labels will have small
defects. Major defects will be listed.

ATARI 8-BIT COMPUTER:

Loose cartridges, no box or manual:
$ 4.00 Atariwriter
$10.00 Ballblazer -- XE cartridge
$ 4.00 Basic -- for use with the Atari 400 and 800
$ 5.00 Centipede
$ 9.00 Delta Drawing [Spinnaker]
$ 8.00 Frogger [Parker Brothers]
$ 2.50 Missile Command
$10.00 Movie Musical Madness [CBS Software]
$ 8.00 Qix
$ 2.50 Space Invaders
$ 4.00 Star Raiders

Cartridges with case and manual:
$14.00 Alphabet Zoo [Spinnaker]

Accessories:
$ 1.00 "A Note Regarding Software" letter: Atari Home Computers
-- some rips
$ 3.00 Atari 1050 Disk Drive Owner's Guide (8 pages).
$ 9.00 Atari 65XE Personal Computer Owner's Manual (126 pages).
$ 5.00 Atari 800XL Home Computer Owner's Guide (22 pages).
$ 5.00 Atari BASIC Reference Guide: For Experienced Programmers
(14 pages).
$ 7.00 Atari Disk Operating System Reference Manual: DOS 3
(100 pages).
$ 5.00 Atari Home Computers: The Next Generation catalog
(32 pages).

HARDWARE:

NOTE: The Lots listed below include only what is listed!

LOT #1

NEW RF SWITCHBOX PURCHASE OPTION

ATARI 400 COMPUTER with power supply, built-in RCA cable, one
Atari Joystick, and three [3] cartridges [no boxes, or manuals
for cartridges]:

Basic -- for use with the Atari 400 and 800
Missile Command
Space Invaders

This is a complete system, except for RF switchbox. This system
also includes the Atari 410 Program Recorder (listed below), at no
additional charge.

$34.00

*****

LOT #2

ATARI 1050 (127K) DISK DRIVE, with power supply and Molex
connector cable.

$39.00

*****

LOT #3

ATARI 1050 (127K) DISK DRIVE.

This disk drive doesn't include the power supply, or Molex
connector cable.

$24.00

*****

LOT #4

ATARI 410 PROGRAM RECORDER, with built-in power cord and Molex
connector cable.

This item has not been tested.

$ 4.00

*****

LOT #5

ATARI 820 PRINTER, with two (2) rolls of paper and built-in
power cord.

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$10.00

*****

LOT #6

OKIMATE 10 COLOR PRINTER, with built-in power cord, "Learn to Print"
Atari DOS 2.0 and 3.0 disk, "Learn to Print" cassette tape [for
400/800, 800XL, 1200XL and 600XL], and extra ribbon (Okidata).

This item has not been tested.

I have plugged in this printer, and after powering it up the power
light came on and the print head moved.

$15.00

*****

LOT #7

EPSON RX-80 PRINTER with built-in power cord.

$27.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for
something that isn't listed, please don't ask (because if I
had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and
systems have been tested and are in working order. I very
rarely sell items that aren't working, but if I do, they are
clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address (this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

5078. Re: Price Guide Questions

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-21 00:00:00 UTC
From: The Shadow <shadow01@aracnet.com>
Message-ID: <5og19n$q0g$1@spitting-spider.aracnet.com>
Source record: 72312

Well, lets be fair here.... While what you listed may be true in
YOUR area, it is certainly not true everywhere....

In the Portland, Oregon area, Goodwill charges as follows,
and sells these computers FAST!

Atari 400 (Computer only, no p/s or anything) $14.95
Atari 800 Ditto... $29.95
Atari 800xl Ditto... $39.95
Atari 65xe Ditto... $59.95
Atari 130xe Ditto... $79.95

810 Disk drive (Bare, no p/s) $14.95
1050 Disk Drive Ditto... $29.95

Power Supplies for xl/xe $19.95
Power Supplies for 400/800/1050 $14.95

SIO Cables $ 3.95

While "I" find these prices a little high, they still last
less than 1 day in the stores, so the average buying public
obviously feels that those are fair prices.

>
> ted slides@abodia.com

GEM files are used on Atari 16bits not 8bits so your in the wrong newsgroup to start with. GEM originated on the PC before the ST so any half decent PC graphics package should read/convert them fine.

For the sake of brevity I've snipped out the price list but
I've left in your other comments because they're so astounding.
The prices and the situation you describe are incredible.
Absolutely amazing.

If your report is accurate, then it would be worth it for
everybody who wants to sell 8-bit stuff to fill up trucks with
it and drive 2000 or 3000 miles to Portland, Oregon, where they
could undercut the prices you quoted and still make lots of money!!

In contrast, a former 8-bitter in my area reported several
years ago buying a boatload of 8-bit equipment -- a big collection,
not just one item -- at a local Goodwill store for $15. There's
a world of difference between the price levels (presumably a
reflection of overall 8-bit interest?!) you claim exist in Portland,
Oregon, and what seems to be the case in most of the country.

In any case, regarding "value" I think the most important thing
to say about the 8-bits is that the greatest value is obtained by
using the computer, not by expecting to resell an 8-bit system at
1982 or 1985 purchase prices. (Except in Portland, Oregon?) I've
long said that by using the best quality hardware and software,
the 8-bit can do a lot. Just because the market price levels may
be depressed doesn't mean there's anything wrong with the computer.
A buyer who picks up old computers for pennies is getting a great
bargain -- if that buyer actually uses the computer to its fullest
potential.

From: Jay Colen <jandc@ccnet.com>
Message-ID: <33AB9ADB.7668@ccnet.com>
Source record: 72315

I just got a Atari 800XL.Two carts star raiders cxl4011,Basic computing language cxl4002.Also 3 cables that plug into the far right Perirhepal slot.And a Texas Instruments video modulator that plugs into the monitor slot.Why it has this i don't know since it has a RF output by the monitor output???

I need a power supply for this 800 XL,to see if it works.

Also is there a floppy drive for the 800 XL.I want to download program and games on my PC for the 800XL.Than transfer them from my PC to the 800 XL.Or would it just be easier to get a modem for the 800 XL and transfer them to a floppy drive for the 800 XL.

Thanks

>
These are the two games that convinced me to keep the Atari - The games are
still unique in the amount of players that can play.

I tried Return of the Heracles with the Ver 3.6 emulator but it's not too
hot without much of the sound effects.

> Both games were built by the programming GOD Stuart Smith....

Wow, if I could find buyers for my Atari stuff that are willing to pay the above Oregon prices I would have enough to buy a complete Pentium system. But like we've heard before... Atari stuff is only worth as much as someone is willing to pay for it.

(Egads, $80 US dollars for a 130XE!)

Help. I recently unpacked my Atari 800 system from years in the attic. Everything works fine, except for the disk drive (810). I get the error "BOOT ERROR" whenever I try to run a disk program, no matter what disk I use (DOS II, VisiCalc, Apple Panic, Word Processor, etc.)

Any ideas? Are there any common failure modes for this drive? I have taken it apart and cleaned the heads. Any suggestions would be appreciated.

Thanks.

Welcome to comp.sys.atari.8bit, the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, 800XE, and the XE Game System.

Many topics are covered over and over again. To help alleviate this trend, several people volunteer their time and energies by maintaining Periodic Informational Postings for this newsgroup. Please take a moment to refer to these documents before posting to comp.sys.atari.8bit. The answer to your question may already be readily available!

Users of comp.sys.atari.8bit actively maintain the following Periodic Informational Postings:

I doubt that the XF551 is locking up from a unrecognized command.
It's probably the menu-loader assuming that you're using a Happy drive.

As I remember,when you used the Happy drives to duplicate a copy-protected
disk,it did so in such a way that the disk would only work with another Happy
drive.At least with some games.

>In return I can either offer cash or supply you with one of my O.S.

I've notied this in PC Xformer as well.
On the real Ataris it's the opposite,you use the 800 OS for just a few games.

>Also, music in a lot of games runs slower than the normal speed but
>the animation is fine (when you speed up the frames/second) My

>My compliments to Markus. Great job.

Well 1MB would suffice.384k for HMA and UMBs would suffice to hold DOS (around
42k) and it's data tables and any device drivers.Giving you 640k conventional
(with VGA) memory.Remember that the Atari emulators only need to emulate 128k
of RAM leaving 512k.And even the DOOM EXE fits in that.
(it's just all those pictures and sounds that take up room)

5105. Re: Best Hard Disk for 8Bit Atari

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-22 00:00:00 UTC
From: msmith@aol.com
Message-ID: <19970622162301.MAA06749@ladder01.news.aol.com>
Source record: 72240

Having sent the original question, I would like to say thank you vtry much for the input. I would also like to comment on the ATR8000 hard disk question. The ATR8000 had a very elegant hard disk interface. A set of simple TTL IC's interface to the ATR8000 via a daughter board which plugged into the Z80 socket. From there a ribbon cable to a Western Digital controller went to MFM style hard disks. The hard disk was then avaliable for use via the Atari, or the ATR8000 CP/M or PC DOS. The guy that did the software for the ATR8000 was very sharp. The only downfall that I ever experienced was the combination of OS's was critical and you had to whach what you were doing or you would blow away the data on the disk.

While I am at it, what is the maxmium size disk I can put on the black box unit, and does any BBS software work with this unit.

Thanks,
Mark Smith

5106. Re: Hard drive with ATR8000

Newsgroup: comp.sys.atari.8bit

Source record: 72241

Please check my reply (response #9 or #10) on the original posting. The ATR8000 hard disk interface was a set of simple TTL IC's. A daughter board containing these IC's was placed into the original Z80 socket. From there a ribbon cable was used to connect to a Western Digital hard disk controller. The interface supported MFM drives.

As the newsgroup's resident deaf poster, yes, they do use TTYs, and similar communication devices. A minicom is a brand name of a TTY, which is what I have. What he wishes to do is interface the TTY with the computer, so he could do all his typing on the computer, and have everything show up on the screen, rather than the TTY screen.

There's various models of TTYs out there, and there are some that have printers as part of the unit. My Minicom has a 10-pin connector that allows me to connect it to my external printer for printing out conversations. Unfortunately, I lost the directions for doing this.

There's a few deaf-related newsgroups, so I'm hoping he asked his questions there, since it's more related to the Minicom series TTYs than it is for his computer.

In reply to your question of what the maximum size hard disk you can put in a Black box:

You can have up to 96 partitions of up to 16 megabytes each (thats about 1.5 gigs) I guess if MyDos 6.0 had come out which promised 48 megs per logical drive, you could have tripled that. The RS-232 can go up 19200 baud. I have yet to see a BBS program that wont work. I have seen Bobterm, Ice-T, the BBS program from K-products (the best in the market) and the carinna BBS all fully 100% compatible with the Black Box. I spoke to Bob Puff the other day and he does have them in stock (I am thinking about buying a second one!)

Cross-posted to: rec.games.video.classic,comp.sys.atari.8bit,comp.sys.tandy,comp.sys.cbm

Have the following stuff available:

Stuff that does not work:

1 Commodore 1541 drive. Power up, but cannot read disk.
Intellivision II, untested, no power supply, the 2 joypads looks to be in bad shape.
Intellivision console, mostly works, but the rf switch is a not working to well, if you got picture, it works ok, you may have to shake the machine a couple times to get the picture, Probably something is loose, should be an easy fix.

These are are free for the asking if you order some other things, but you have to paid shipping. Otherwise, $5 + shipping and you get all 3 items.

Stuffs that works,

Atari 800, 48 K, no power supply, but it works. $7 + shipping

Tandy Color Computer 3, works, the space key's kep cap is missing, but the space key still works. In good condition. Console only, $10 + shipping.

Commodore 128D, C-128 with a built in 1571. The machine is in good shape, the detachable keyboard, is in bad shape, the outer case for the keyboard is not there, and 3 keys are missing, (all keys missing are on the top roll, one is F1, don't know the other 2), the keyboards still works though. Make offer.

A 80col amber(or green) rgb monitor for the C-128. The cable adaptor is kind of ugly, but it works flawlessly. Make offer.

Thanks,
sze

5113. Sound problems with XL-it

Message-ID: <33ADB312.3866@tra.auracom.com>
Source record: 72248

G'day,

I was hoping someone in this group could help me out. For some reason I can't get the sound emulation to work with my Soundblaster-compatible (ATI?) card and XL-it 20. I have the SET BLASTER perameters set up fine, and I'm running XL-it under DOS 6 on my crappy 486/33 DX.

Has anyone else had this problem?

The only other peculiarity I noticed is that I can't turn off the XL emulation mode; it keeps turning itself back on.

I'm dying to play MULE with the funky music....

Here's a detailed list of the computer books (90% Atari 8bit) I have for
sale

But first, the original software..

B/Graph with Enhancement disks from Antic plus original spiral bound docs
$15

Sentinel One
Stellar Shuttle
$2 each (sorry no docs, no nothing with these two)

Lode Runner C64 version one side, Atari 8 bit (48k) version on other
with original box
$5 SOLD!!!

Dos 2.5 original disk with spiral bound docs
$5 SOLD!!

Dos XE : original disk with spiral bound original docs
$5

original docs for Cartridge Demon Attack
$1

Now for books, magazines..

The following are original spiral bound...
COMPUTE 1st Book of Atari, (c) 1981 $10
COMPUTE 2nd Book of Atari, (c) 1982 $5
COMPUTE 3rd Book of Atari (with RARE 1200Xl memory map) $10 SOLD!
COMPUTE 1st Book of Atari Games $5 SOLD!
COMPUTE 2nd Book of Atari Grafx $5 SOLD!
COMPUTE Mapping the Atari (complete 400/800 memory map) $12 SOLD!!

Epson FX-286 9pin printer manual $2
Atari SX212 manual $1
SpartaDos 1.1 original manual with 1050 Ultraspeed installation docs
$5

basic for adventure games and graphics the Atari way $2 both SOLD!
Compute Magazine issues Septemeber, october and november 1981 $10/each
Compute Magazine April 1982, June 1982- Nov 1983 (complete) $5/each
Computer December 1983 (mega issue) $8
COMPUTE magazine Jan. 1984 - December 1986 $3/each
COMPUTE October 1987, April 1988 $2/each
COMPUTE May 1988- March 1989 $1/each (no more Atari 8bit support in these
uissues)

Family Computing March 1985 $1
Atari Adventurer April 92 $1
Consumer Resport Feb 1984, compares C64/Xl/Coleco and TRS 80 $2
Users Guide to Atari (contains product info) $2
Computer monsters (basic programming book) $1
Atari Explorer Jan/Feb 89, February 1992 (both issues $3)

Analog November 1989 $2

Antic magazines June and May 1983, $4 each
Antic June 84, Aug to Dec 84, $3 each
Antic January to December 1985 complete, $2.50 each
Antic Jan 86, Feb 86, May 86, April 87, May 87, July 87, $2/each
Antic Sept 87 - December 87, $2/each
Antic March 88, June 88, May 88, $2/each
Antic october 1988 thru to May 1989, $1.50 each

Antic Anthology 1982 Volume 1, book.. $5 SOLD!!

Prices are in US funds and are negotiable....

Please reply via private mail.

Alan

ALSO added to the list

What Else Can you do with a MicroComputer by hayes 1984
-- has basic programs for the ADAM, Apple, C64 and Atari 8bit
-- games, productivity, simple basic stuff $1 50 pages

Understanding Computer Grafx by Usborune/Hayes with simple basic programs,
not much Atari stuff in this one but it is great for children to
understand computer grafx $1 50 pages

Basic Atari Basic by Coan and Kushner, hayden Books
- this baby has everything about the 8bit (in basic) sound, grafx, i/o,
etc, 1984, has tonnes of type in programs $10 over 300 pgs

Inside Atari Basic by Bill Carris about 160 pgs, an excellent intro basic
book with humurous pictures. Not as technical as the previous book $5

New 8bit hardware added

Atari compatible Paddles (1 set has 2 paddles) $5
1 Atari joystick $3
2 Quickshot (autofire) atari compatible joysticks $4/each

ICD Printer connection (allows you to use non-Atari printers) works on ANY
8bit. connected to SIO port. $15

8bit ROMS
BASIC CXL4002 (rev a)
DEFENDER
SPACE INVADERS
STAR RAIDERS

PACMAN
CENTIPEDE
MOON PATROL
(with original boxes on these ones!)

1 Atari XE light gun
XE game cartridges for use with LIGHT GUN
Bug Hunt
CrossBow (very very nice)
Barnyard Blaster
Crime Busters

1 Acex 2400 baud modem with power supply and manual (no interface!)
$18

Atari 410 program recorder with original box
about 30 or so tape programs (mostly games) with 3 tape holders (each
case holds about 10/12 tapes)
$5 for the record $10 with all the tapes

the XE light gun and 8bit cartridges are negotiable prices, make an offer
in e-mail.

I also have an Xf551 disk drive and a 256k 800Xl but I will not sell those
until I sell the majority of this other stuff, because without the main
hardware the rest of my stuff is really useless to me.

To my knowledge the Black Box can access 8 16 meg HD partitions (the 9th drive is a ramdisk), but it can cycle through 96 16 meg partitions (the other 92 partitions are "offline") Which would mean you can at LEAST use 128 megs (which really is an over kill) the entire 8bit software libary is no more than 100 megs!)

I ran Oasis 4.7 with my Black Box and I know BBS PRO! runs fine with it. I can't comment on the other BBS packages but they should run fine too) There is a Toronto Atari 8bit sysop that use a Black Box and he cycles all 96 partitions "online" so users can access his 500 meg or so hard drive. The BBS is

The Jail BBS

(416)762-9316
Running BBS PRO!, speeds up to 14,400, emulation for 8bit, St, IBM.
Online games, messages, files etc.
Networked with a dozen or so of the few remaining 8bit boards.

Located in Toronto, Ontario, Canada

I don't run the board but a good friend of mine does, using my old Black Box as his Hard drive interface.

Thanks for the reply. At first I thought I was losing it there for a
second. Because quite a few of the titles I was testing required 64k
XL/XE but died. yet they ran fine under the 800 OS. odd. Anyway,
according to the author of Xformer, Atari 8bit emulation does NOT require
a fast machine or huge amount of memory. Hence, my 486 33 with 24 megs
ram should run any 8bit title at a decent speed.

5120. Games and Emulators

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-23 00:00:00 UTC
From: lott@phase4.com
Message-ID: <5olp1ivd1@news.ro.com>
Source record: 72255

I recently tried to get a couple of my Atari 800 games to run on one of the Atari emulators available. The two games I tried are Apple Panic and Caverns of Mars.

The first one I tried, POKEY, was aptly named. It ran the Caverns game, but I couldn't get it to run Apple Panic (I may have a bad disk). The caverns game ran incredibly slow - so slow as to make it unusable. (I have a 486 DX66 running Windows 95).

The other emulator I tried, XF25, seemed much faster, but didn't recognize any joystick or keyboard-joystick commands on the Caverns game (again, I couldn't get Apple Panic to run). Also, I think the space ship should have exploded when it hits the walls of the cavern, but it went straight through them instead! Even if I learn how to regain joystick control, the game wouldn't be much of a challenge if there's no consequences to hitting the walls.

Has anyone used an emulator to successfully run any of these (or other) Atari games on their PC? Also, any ideas where I can get a copy of the Apple Panic disk image (or VisiCalc, for that matter - I seem to have several disks gone bad)? I did an Archie search, which only yielded Apple and C64 versions. I've also written Broderbund, but I'm skeptical that I'll get a positive reply, even though the package says "lifetime" guarantee - my wife says it means the life of the game, not *my* life!!!

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *before*
asking any questions, or placing any orders. Thank you!

This list was last updated on 06/21/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site, including 233 for various 8-bit computers!

I have the following printers available, for sale or trade. These
were acquired with various computer systems, and while they may work
with more than one type of computer system, I have included the
type of system that they were acquired with, where applicable.

There are a few items that are listed as untested. When I bought
these items I was told that they all worked, but due to a lack of
time, I have been unable to test them myself.

HARDWARE:

NOTE: The Lots listed below include only what is listed!

APPLE][COMPUTER:

LOT #1

APPLE IMAGEWRITER II PRINTER with power cord.

$79.00

*****

LOT #2

APPLE IMAGEWRITER PRINTER with power cord.

$10.00

*****

LOT #2

COMMODORE MPS801 MATRIX PRINTER, with built-in power cord.

I have plugged in this printer, and after powering it up the power light came on and the print head moved.

$19.00

*****

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address (this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

While browsing the web, I found not only the emulator mentioned above, but and archive site for various games and programs, such as the two I'm missing. The VisiCalc disk was readily available in a section called bootdisks, whose meaning is clear. However, Apple Panic was only available as an EXE file - seems to me (my recollection is fuzzy here) that Apple Panic was also on a boot disk. This being the case, how do I convert from EXE to boot image - or do I simply RUN the .exe file???

You asked the question:

Where did I dig up Rockman?

You can currently buy it at Micro Discount (real cheap too). The owners' name is Derek Fern. His Http is:
http://ourworld.compuserve.com/homepages/derekfern/
Also has other new European software from L.K. Avalon and Mirage etc.

I have also heard you can get it at Yogi's site (without instructions of course)
Either way it's one heck of an addictive game!

You can try a program available on my web page
http://ourworld.compuserve.com/homepages/ken_siders/atari.htm
that will patch the XL rom to let more stuff run, at least on PC XFormer.
I don't know if it could be the same problem
with XL-It. If there is any success or any problems, let me know. With
XFormer it keeps BASIC from sometimes
reenabling itself when it shouldn't causing a lockup or READY prompt.

5131. Changing Atari 5 1/4 to 3.5 floppy

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-23 00:00:00 UTC
From: KenMarEd@nucleus.com
Message-ID: <866924556.25607@dejanews.com>
Source record: 72266

I have an Atari 800 XL game on a 5 1/4 floppy that I would like copied over to a 3.5 floppy. I don't have any of my Atari hardware anymore so I cant do it myself.

I would prefer someone who is in or around the Edmonton, Alberta region in Canada. I would like to see if I can run this game using an emulator on my PC.

Please reply as soon as possible.

Hey not everyone lives in this great state of high taxes, smoggy skies,
and dirt cheap micros at thrift stores... :)

And how come you haven't posted in alt.technology.obsolete yet???

In Germany some guys want to have up to 250.- DM for ar 800XL with 320kB
RAM or a 1050 with Speedy. Real prices are about 30.- DM for a naked
800XL/XE or 50.- DM for a Floppy.

You would probably just need a 34-pin to 50-pin adapter. The wiring diagarm
for this adapter is often posted in comp.os.cpm (look for "8 inch" or "floppy"
in Dejanews, or it might be in the comp.os.cpm FAQ.) You'd also need a power
supply if the 8-inch drive doesn't come with one. If I remember right, most
drives need +5 and +24 volts, and 120 volts ac for the motor.

I got it working. Using ATARIOSB.ROM and TURN off XE emulation and turn
on Atari 800 emulation. works fine, sounds great!

STOP right there! In the emulator docs for XLIT 0.20, the author
maintains WINDOWS 95 SLOWS down the emulator. Never run ANY emulator
under W95 unless you absolutely have too. Run the emulator in PURE dos
mode. I have XLIT 0.20 and it runs about 90-90% of the stuff and the
sound is amazing. XFormer 3.6 does an adequate job on the 8bit sound,
but its really not that good.

> The other emulator I tried, XF25, seemed much faster, but didn't recognize any

Also, if the emulator is running TOO fast, collision detection sometimes
doesnt work. I have played many 8bit games on the emulator (XLIT 20)
where I go right through the walls or my shots go right through the bad
guy. Most emulators you can slow them down...

5140. Umich 8bit Index?

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-24 00:00:00 UTC
From: ud264@freenet.Victoria.BC.CA
Message-ID: <EC9Kut.EzA@freenet.victoria.bc.ca>
Source record: 72132

Can somebody tell me if the Umich 8bit Index of files still exists? I access the Umich 8bit/ST archive at FTP.TOAD.NET with the help of the Princeton FTP mail server and the main UMICH index file only contains a listing of the ST/Falcon files. This index also used to show the 8bit stuff. Did Bill Gates come along and eat the index file or did it get moved into an unknown sub-directory.

Thanks.... Ted

> fine, and I'm running XL-it under DOS 6 on my crappy 486/33 DX.
>
> Has anyone else had this problem?

I had the same problem and bought an original SoundBlaster 16 Card,
as my "compatible" card wasn't compatible enough. XL-IT was the first
programme where I had problems with the sound - but if it works it is
absolutely excellent.

Harald

: reflection of overall 8-bit interest?!) you claim exist in Portland,
: Oregon, and what seems to be the case in most of the country.

I can vouch for that. Why just today I picked up an Atari 800, two 520STs,
a 130XE, 4 Commodore 64s, 7 1541 drives, 1 old Commodore 2031 drive, an
Indus GT drive, a Morrow Designs computer, two Morrow Designs printers,
a Psion II organizer, a ton of books and manuals and all the power supplies
I wanted for $70 (plus tax). Let's see, in Portland that wouldn't have even
bought me a 130XE. Even at $70 I got ripped off. $40 would've been more
like it.

Source record: 72272

I have some old COMPUTE! magazines and I don't want to type out the programs - I'm scanning them instead. Does anyone know of a program that can convert IBM ASCII text/Basic files to Atari Basic files in ATASCII format, which can then be used with Atari emulators or real Ataris? I've found a program that can do just that, only it converts ASCII to C64 format.
If there is such a program for the Atari, I can simply copy the converted file onto an XFD or ATR image with Xformer or XL-it.

http://www.best.com/~morbid/manuals/manindex.htm

As far as I know, MAC-65 was the best assembler, at least 8 years ago.
But now I would use a crossassembler on IBM.

I have been toying with the idea of using an 8 bit emulator program on the clone (not that I would ever replace my faithful 800xl). I see people talking about running Bruce Lee and other early to mid 80's software. While excellent games (god knows how many hours I spent playing Bruce Lee in my high school years), how about the newer stuff?. I am talking about L.K. Avalon games, Fred, Mission Shark, Hawkmoon, Miecze valdgira, Rockman, among many many others. Has anyone gotten to run these on ANY emulator? I would appreciate a response.

Thanks!!

I have an old Turbo PASCAL program for DOS that goes the other way
(ATASCII to ASCII). It shouldn't be too hard to alter it to do the
reverse. I can email you the source if you're interested.

Hummmm. I think you're right.

> 2) $00-$7F used by OS (different variables)

Yup, OS page zero stuff.

> $80-$FF normally free but sometimes used by applications like
> MAC/65, BASIC etc.
>

Yeah, I was making a big library in asm and it worked using Page Zero
memory to keep things quick. I recall working hard to reuse all the
page zero locations I could to keep from stepping on my own toes,
because between BASIC and the OS FP there wasn't much left that was
free.

5162. Re: Price Guide Questions

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-25 00:00:00 UTC
From: BobKlaas <bobkla19@tcd.net>
Message-ID: <33B1B218.70A9@tcd.net>
Source record: 72147

Price Question? First of all, perhaps these suppliers are advertising new equipment? If so then not so far out of line if comes with original box manuals ect...and gurantee..

I provide used equipment for a simular price, but with a gurantee, and shipping included within the U.S.A..so when you say a 1050 disk drive, power supply and sio cable for $25.00 shipped..and it cost $8.00 to package and send it then you are looking at $17.00 for the drive with a gurantee? Good or not? Depends..

I just shipped 4 items for $100.00 to a person, shipping on it was $42.50
so each item cost $14.38 ea plus shipping..If you find something very cheap at a Thrift store by all means buy it, buy all you can get you can just unplug it when it quits and slap in another.

>IBM games? I believe IBM gamepads use resistors to return a constant
>value for each direction (simulating a 'stuck' potentiometer... it
>works)

Why not just buy a cheap PC gamepad, open it up, and connect the switches on the good-quality stick to the right connectors inside the gamepad? That would surely be easier than trying to rig up the right circuitry from scratch and solder together a cable. I've thought about building a 7800 joystick the same way using an arcade joystick assembly and the guts of a regular 7800 controller. At CompUSA and such places, I've seen PC gamepads for $10 or less. Don't know how well made they are, but FWIW I have a $15 one that works fine---it's olive green and says "QuickShot Command Pad" on it.

Good luck,
Alex Chamberlain

In article <5oqukl$3er$1@news.ro.com>, rclott@ro.com says...
>
>I've gotten a couple of games to work, now that I've switched to using XFORMER
>3.6. However, the Joystick on my PC doesn't seem to completely work with the
>emulator. The FIRE button seems to work, but the direction controls don't have
>any effect. I used the -J option when I ran XFORMER - am I missing something
>else? (I'm using 486DX2 running Windows 95).

I received a helpful suggestion yesterday - run my program in DOS mode. I tried this, and it didn't make any difference. I tried both XLit 0.20 and XFORMER36, with the same results. It seems that the fire button works great, but no movement action. I ran the Gravis utility that comes with the joystick, and the computer clearly recognizes joystick motion. I ran the joystick calibration program that comes with XLit, and it, too, seemed to complete the calibration process without any errors (I don't see any indication that movement was being processed with the XLit calibration process, unlike the Gravis utility where moving values are displayed as you move the stick). I didn't see any similar program with the XFORMER emulator.

The two games I'm using as my baseline are Caverns of Mars and Apple Panic.

Perhaps I'm missing something basic and simple. Any more suggestions would be appreciated.

Un-related question.... how to comvert a .EXE file into a bootable image .XFD disk?

Thanks.

-Chris

The Atari emulators are in an early stage of development. The long
timer in the
PC Xformer and it will run most BASIC games. I've went threw 1000 of ML

games and even when I found one to load it didnt play correctly. This
is
probley due to all the costom 40 pin IC chip in the Atari 8bit.

It looks like Emulating the XL/E will come way into the year 2000.

On the other hand, Theres the Gameboy, ADAM, and NES Emulators that
will run 99% all software on there platforms with great speed and PERFECT
sound and joystick support.

But Im still waiting to run my 8bit Atari stuff on the PC.

Emulation is a strange duck, and you have to appreciate the technological skill of the developers. I've found that some programs that won't run under PC XFormer will run just fine under XL-It!, and vice-versa, It also depends greatly on the PC in question. Mine has an AWE-32 sound card that works beautifully with XL-It!, but gives me all kinds of trouble with XFormer. My Pentium 100 seems to run stuff under XL-It! much too fast, while guys with faster PCs complain that programs run slowly under XL-It!. Go figure.

> On the other hand, Theres the Gameboy, ADAM, and NES Emulators that
> will run 99% all software on there platforms with great speed and
PERFECT
> sound and joystick support.

Perhaps the guys who designed those machines had emulation on a PC in mind when they designed them <G!> I don't know. The Atari 8-bit's custom chips put it way ahead of other computers of the era, but made emulation difficult -- more difficult, it seems, than other computers.

> But Im still waiting to run my 8bit Atari stuff on the PC.

If "stuff" is limited to games, you may have to wait. But there are those of us who wouldn't limit it to games. I know, there are far more sophisticated and easier-to-use applications available for the PC than those that run on the Atari. But more than one Atari user has stated that they love being able to use programs like TextPro on laptop PCs.

>
>As far as I know, MAC-65 was the best assembler, at least 8 years ago.
>But now I would use a crossassembler on IBM.

I have another version of the MAE assembler ready for release. It's a lot
better than MAC/65, and a lot more interactive than using a cross assembler
since you still need to debug natively. Here are some of the features:

Excellent full screen editor with key macros, automatic 'JSR' and return to
subroutine and data labels, block moves and copies, and multiple undo.

Compatible with XEP80 and other 80 column devices. 64 and 80 column
high-speed software drivers also included.

High level of integration between editor, assembler, and debugger. The
editor can take you directly to lines that had assembly errors. The
debugger can reference labels in the symbol table and assemble single
program lines.

True local labels.

Full text-substitution assembler macros.

Full 65816 and 24-bit support.

Uses only 1.25K of main system memory. Most of the code resides in bank
select. (Still runs in 64K, but you'll only have 13.75K for source buffer).

Still being supported!

John Harris Japanese translation of Microsoft slogan:
jharris@poboxes.com "If you don't know where you want to go,

I'm back online, and hopefully I'll stick around a bit longer this time.
John Harris, as in Jawbreaker, Frogger, Hackers, and the MAE assembler.

New EMail address is jharris@poboxes.com which is a forwarding mailbox.
Thus, I shouldn't have any more problems with ISPs crashing or going out of
business.

MAE is finally ready for primetime. Check out the additional announcements
for "MAE Assembler" and "65816 computer" in this group.

John Harris Japanese translation of Microsoft slogan:
jharris@poboxes.com "If you don't know where you want to go,
we'll make sure you get taken."

5175. MAE Assembler

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-26 00:00:00 UTC
From: jharris@poboxes.com
Message-ID: <33bb94f7.863217223@news.sierratel.com>
Source record: 72160

The MAE assembler is finally ready for a primetime release. I am sorry for those of you who have been waiting a year for this. It was another difficult time for me personally, but I expect things to improve from here. I hope I can partially make up for it with some of the newest enhancements to the assembler.

For a little background, MAE originally came from Eastern House software, makers of the Monkey Wrench. I've been using it since 1981, although I made substantial modifications to it before I found it a useful tool. In the first few years, I tried to get Eastern House interested in the changes I made, and in return I wanted to get actual source code to help fix some of the more elusive bugs I encountered. The situation never worked out, and I eventually realized that I was not going to get the kind of tool I really wanted without writing new code anyway. The problem, was that I could never justify taking all the time at once to write the whole thing from scratch. Instead, I kept doing more extensive mods, and replacing modules a bit at a time. It was always for my own use, but several years ago, others became interested in it. Anomalies that I had gotten used to now seemed more embarrassing with the prospects of others using it. There was also the issue of not wanting it to be placed in general release while still containing much of the original Eastern House code. This started a snowball of more replacements and rewrites that ultimately arrived here.

I really want to thank those of you that sent money or other goodies as a kind of shareware contribution, even though I did not ask for anything. It was a terrific gesture that gave me much of the inspiration I needed to get this completed. I also want to thank Itay Chamiel for providing 80 column software routines like those in his Ice-T terminal, and doing most of the work to adapt them to a 64 column mode. Finally, thanks to the beta testers and suggestions I received that account for many of the new features.

New features for this release include a configuration utility, completely new macro system with full text substitution, new conditional assembly (nested also), comment or uncomment blocks of text, load/save key macros to disk, and many others.

For those of you not familiar with earlier versions, here are some of the feature highlights:

Excellent full screen editor with key macros, automatic 'JSR' and return to subroutine and data labels, block moves and copies, and multiple undo.

Compatible with XEP80 and other 80 column devices. 64 and 80 column high-speed software drivers also included.

High level of integration between editor, assembler, and debugger. The editor can take you directly to lines that had assembly errors. The debugger can reference labels in the symbol table and assemble single program lines.

True local labels.

Full text-substitution assembler macros.

Full 65816 and 24-bit support.

Uses only 1.25K of main system memory. Most of the code resides in bank select. (Still runs in 64K, but you'll only have 13.75K for source buffer).

Still being supported!

Some of you may remember an anouncement I tried to make a few years back, but later had to keep quiet. It concerned a new atari-compatible computer made with a 65816 processor and some other cool stuff. It was being manufactured for a dedicated application that I actually never found out what it really was. I found out about it at a time when I was selling character generator software on the Atari8, and having immense difficulty obtaining Atari hardware. It was a great connection to make, and we are still selling these new systems with my CG software installed.

The big project never materialized, since the company making the systems and Atari could never reach an agreement for large supply of Atari custom chips. It seemed like a no-brainer--Atari had chips, these guys had money, it should have been a simple exchange. It's no wonder Atari doesn't have any feet left. They keep shooting themselves there.

Anyway, the bottom line is that Atari negotiations were the reason behind my silence at the time, and now that the project is completely dead I can make public the details of the machine for all those that are curious.

It is based on a 5.37MHz 65816 processor, although it still runs 1.79MHz when accessing the base 64K of address space for compatibilty with the custom chips. It is in a nice case with internal 3.5 high density floppy and hard drive, parallel and serial, expansion slots, fully static memory (turn the power off and on, and everything is still there!), mouse support, and separate IBM-style keyboard. It has its own Sparta-like DOS, and with 65816 optimizations the memlo gets down to $FA3. I've found the compatibility to be extremely good, with two main problems. Some european programs, especially demos, use the undocumented 6502 extra instructions, and these don't work on the 65816 CPU. The other issue, is that there is no cartridge slot. Technically, it is feasible to add a slot using a plug in board, and run a connector out the back. It would probably depend on the number of interested parties for whether it was financially affordable to get the thing made. One nice thing about the slots though, they are physically the same as IBM 16-bit ISA cards. (but not electronically compatible of course). You can get experimenter boards for IBMs that just run power and have all other connections open. The do-it-yourself'er can do pretty much anything from here.

Because of being a very low-production item, it is really expensive by 8-bit standards. Retail is $1800 with all options and the CG software. Obviously, it's only being sold to commercial applications like hotels and cable TV at that price. It is possible to make some deals if anyone is interested, especially for systems without the CG software. Obviously, I need to be fair to the people who are still buying the system for commercial use. I don't have any prices for you, but if anyone is

interested at all, please let me know and I'll see what we can work out.
If you're just curious for info, let me know that too.

You might consider a Poqet PC (or other MSDOS based palm top) which
should easily run the old DOS version of Borland Turbo Prolog. You can
get a new Poqet at http://www.cadigital.com for $189.

I got Zybex to run near perfectly using Xlit 0.20.. problem is when the
game speed is normal, the music is too slow, but when the music speed is
PERFECT the game speed is too fast.

A couple of those LK Avalon games worked (the ones as megaImages on Yogi's
sites) A couple of the ATARI UK games also worked. (Somewhat) But
seriously, nothing beats a REAL Atari 8bit. The emulators are great to
bring back some 8bit magic but I have yet to playu a game on the emulator
(any one of them) that is BETTER than on a real 8bit. Games like AR: The
City and AR: The Dungeon actually run SLOWER than if you had a real 8bit
with a couple floppies..

Here are some questions asked by Brent Buescher, that I'll answer here for others to see.

-what is the video circuitry like? which of the eight-bit models is it most like? Does it incorporate Ben Poehland's Super Video fixes?

The video is engineered from scratch, and is higher bandwidth than any of the Atari models. It looks superb on split-video monitors. I think it looks very good on composite as well, but there is one factor that can make it look worse on some monitors. Atari's chroma signal is much too hot and way out of NTSC specs. Monitors will compensate for this by effectively turning down the color gain. What happens as a result, is that color artifacts, the usually unwanted color fringes that occur on high res pixels, get diminished with the reduced gain. On the D816 (the new system's name) the artifacts will generally be more prominant since the color gain is higher.

There is a very simple mod consisting of a resistor soldered in parallel across another one that brings the chroma level up to Atari XE levels, and makes the composite output look better than XE in all cases. There is also a more extreme mod that requires tuning a coil, but virtually eliminates all artifacting in the composite output. The image is then really clean, but you'll have to play Jawbreaker in a B/W maze as a result. :-)

-how are the ergonomics of the DOS and hard disk system? That is, how do they compare to a Black Box and Sparta? I found the black box's partitioning system extremely convenient and easy to use.

He licensed the BB and Sparta software, so it is virtually identical.

-is the IBM keyboard interface featureful like the TransKey or is it rudimentary?

Well, it's different. I wanted access to the function keys for my program, so they all return unique keycodes. Same thing with Home, End, PgUp, etc. Some of the Shift-Ctrl letter keys that return nothing in the Atari, do return the logically expected code on the D816. All 256 key codes can be returned, but there is not much in the way of 'fancy' implementation. One thing I like, is that the two alt keys are mapped to Select and Option, which works out really nice when programs use Select-key combinations. I think some of the mappings work out to 1200XL function keys, because Home for example takes you to the beginning of the line in any E: environment.

In short, it's a design to give additional key codes, versus additional functionality to the existing Atari.

-does it support ultraspeed in the OS?

Yes.

-how much memory does it conveniently support?

It comes with 128K in XE compatible and ANTIC compatible banking. At least one board design exists to give 4 Meg (I believe) of linear addressable memory in the 24-bit address space, but I do not have one. My CG board has 32K of upper memory, and I believe this can be extended fairly easily to 1 meg or maybe higher. I still need to find out all the options for memory enhancement.

-how many joystick ports?

2, with standard DB9s. It also has an Atari SIO port, but uses a DB15 so a special cable will need to be made. Easiest, is to chop one end of an SIO cable and attach a DB15.

-does it support XL bank switching? (i.e. access to the full base 64K in the same way that XLs do) I infer from your post that it's not XE-like...

It's XE-like. Again, I'm not sure of the options to go above 128K in the XE address space. I know all of the portb bits are used, but I think there is at least one bit that could be sacrificed for enhanced memory. If you're thinking of ramdisks though, forget it. Access will be much faster in upper memory because of the 5.37MHz speed when you get outside of 64K.

-- Other notes --

It has a 65816-aware OS that handles native interrupts. The MAE assembler supports all 65816 code and the full 24 bit address space. There is also a custom version for the D816 that uses the PgUp, Home, etc. keys.

ONLY AVAILABLE IN THE:
U.S.A, VIRGIN ISLANDS, AND PUERTO RICO CANADA*

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax,
pager, voice-mail, and cellular numbers and give them your New "Virtual Office"
800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone?
Wouldn't it be nice to be able to give everyone just ONE phone number that
will find you anywhere you are? Even out of town, or in a restaurant, or even
on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving,
Even without a fax machine! E-Mail Notification and Delivery, Without a PC!,
Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888
Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice
Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial,
Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection,
Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web site:
http://www.mynumber.com

* Based on our best priced plan.
* Canada has a higher per minute rate.

Dear Friend - Thank you for your interest in our advert.
We are going to market valuable information to Internet Users by post. To reach as many people
as possible, we have to make use of agents. We would like you to work for us as an agent, distributing this information to the public on our behalf from your home. You will be supplied with
the addresses of various people, the information to send to them as well as an attached letter and you will receive $10. This will be your payment.

On average you will send out 500 letters every month with a response of about 60%. This will be an
earnings of $3000 in your pocket. If you want to be really pessimistic and expect a response of a
mere 30%, you will earn $1500 for that month. The envelopes and stamps are provided, and so is
the material which you must send, so expenses are minimal and you receive an extra $1000 or so in
your pocket every month! for simply filling and posting envelopes. Your working time will be under
two hours per day, and remember you work from home, therefore you are your own boss and YOU decide when you work. You will keep in regular contact with us.

To be appointed as one of our agents, we ask you to send us a small registration fee of $15.00
(or equivalent) in the form of cash. Please enclose a Self Addressed Stamped Envelope with your registration fee. Upon paying this fee, you will be appointed an agent and recive the information you are to post to the public, as well as your instructions and all other necessary
information.

Please complete the application form and supply us with a business name under
which you would like to trade.

Yours sincerely,
The Manager

That's an Atari 850. The 810 is a floppy disk drive. The 850 is
mainly used to connect printers and modems to the Atari. Serial port
4 is a current-loop port, and the other serial ports are RS-232 (but
the pinout is not the same as an IBM serial port; the PC-AT was not
yet invented, and there was no standard 9-pin serial port).

The parallel port can be used with no additional software; the serial ports
do require some software. To use ports 3 and 4 you would probably have to
write your own. Only one serial port can be active at a time, so you can't
run a multi-line BBS with just one computer and an 850.

The 850 uses the same 9 volt AC power supply as used on the 400, 800, and most
Atari floppy drives.

The best monitor for an Atari 8 bit that is readily available today
would be a television with an S-video input---these tend to be large
and high-quality, so the s-video input is the deciding factor there.
You'll have to build the cable yourself, and if you have an XL you'll
want to do the Super Video upgrade that Ben Poehland published in
Atari Classics a few years ago---this puts the chroma signal back on
the pin that it should be and cleans up the video signal enormously.
It's really more of a fix than an upgrade.

I use a commodore split-video monitor. They work great and are
cheap-to-reasonable when you can find them.

Source record: 72176

It's not an 810. It's an 850, as in 850 interface module. It gives Atari computers a standard parallel port that requires no special driver software (the P: device is a standard part of the ROM's OS), and 4 serial ports that DO require special driver software for the R: device.

Without a doubt the best monitor you can buy for your 8 bit is an Amiga monitor (also made by commodore). I have a 1084 and the picture is unbelievable. I have had a magnavox, 1902 and used an S-input TV. The Amiga left them all in the dirt. I found mine by posting a message in the Amiga newsgroup. Just my 2 cents' worth.

5201. Atari Computers For Sale!

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-27 00:00:00 UTC
From: bensmith@kelly.teleport.com
Message-ID: <5p1lflgst1@kelly.teleport.com>
Source record: 72186
Cross-posted to: pnw.forsale,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

I've been recuperating from serious depression. I've still got bills to pay, so I'm going back to work in a limited capacity. Selling Atari in the U.S. I can handle. But for now, I'm cutting back on selling abroad as it's hard enough when I'm in good shape. So I'm dealing with depression in the usual way. 1) Don't make promises I can't keep. 2) Only set goals within my reach. 3) Commit myself to taking weekends off and keeping my mind off of work. Lessons we could all learn.

I have some Hard Drives I got directly from the Shadow of Shadow SoftWare. He says they've worked since they were pulled from their Computers. These are $25 each as is. They are MFM or RLL. E-Mail: bensmith@teleport.com or call Ben at (503)256-9974

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to

for Help.

Dear Internet user,

If you are paying for your Internet services
then you have not heard about 1stFamily.
We have a marketing method that guarantees
you will not have to pay one dollar to access
the internet.

* You will never again have a busy signal !

* You will always have the fastest access you have ever seen !

* Risidual income for the rest of your life !

* and much much more.

This opportuinty is for YOU to take advantage of !

Do you wish to continue the rest of your life paying $19.95/month to
access the Internet when you can access it for free with
speed and reliability that exceeds the other competitors ???
We did not think so. That is why our company is the best and fastest
growing of it's kind and will soon compete with AT&T and MCI and
all the big companies in providing Internet Service.

For complete information please mailto:sameer@1stfamily.com and
type "More Info" in the subject box.

You will recieve our webpage address where you can get inrolled in
seconds !!

Message-ID: <5p0g1g$qpl@main.freenet.hamilton.on.ca>
Source record: 72189

First off, I was wondering if anyone here actually received their FTe Sparta X upgrades. You see, I paid for 3 chips, (I was billed Visa) but never got the items from Mike. (Shame on you Mike)

Later, Bob Klaas was kind enough to burn and send two Sparta X chip upgrades. So, I was only "burned" for one chip ;-)

However, when I got around to installing them a month or so ago, I noticed that there was no reference to FTe in the copyright. I havent played with the cart, so I have not noticed any differences except the ICD version number which was .1 above my old one...

My question is, did I get the "FTe" upgrade? If so, what are the enhancements?

Second issue. I am looking to put my BBS, System Reset! back up on a part time basis....perhaps 10pm to 10am Eastern time...I dunno....or Sundays....

At any rate, I do not want to spend ANY money on packets, and would like to join a Pro net by passing messages through the Internet. I am interested in networking with any Pro BBS except Beco Tel and the Jail, as I want nothing to do with these individuals.

Willy

5205. Q's: Atari Touchpad and AtariArtist cart

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-27 00:00:00 UTC
From: lvt-cfc@cyber2.servtech.com
Message-ID: <5p0htv$sph@cyber2.servtech.com>
Source record: 72190

Hi Gang!

I picked up a used Atari Touchpad at a garage sale several years ago, but didn't use it because I had no software that used it. I learned here that the AtariArtist cartridge supported the Touchpad, though, and kept my eyes open for one. I'm pleased to report that I found one a few weekends ago at a local Hamfest-and-Flea-Market, and that I have successfully used my Touchpad! Of course, just getting it to work is never quite enough for us tinkerer types, so I have a few questions...

1) Is there any OTHER software "out there" that supports the Atari Touchpad?

2) Is there perhaps any "extension" software, disk-bootable probably, that adds functions to AtariArtist? An "undo" function would be nice, as would be an "ellipse" (rather than just "circle") object.

3) I'd like to try writing some software of my OWN to read the Touchpad. Before I try to figure it out on my own time, does anyone here perhaps ALREADY KNOW "how to read the Touchpad?"

4) My Touchpad seems to have a few "rough spots," and the button on the stylus itself works only intermittently. I can live with this but would prefer a Touchpad that is smooth and whose stylus trigger button operates properly. Anybody have one they want to sell cheap? (I got mine for about a buck, as I recall.)

Incidentally, my newsfeed here stinks; I rarely see the same thread twice, let alone followups to my own articles such as this one. Therefore, would you please be so kind as to e-mail me even if you ALSO POST? I'd appreciate it, and will be happy to do the same for YOU some day if you request it.

Thanks in advance,

Chris Chiesa

I just found another batch of original Atari 8bit software..

The Diamond OS disk by Reeve Software with Docs!
Need at least 64k Xl/XE, This is the limited disk version, not as fast or as powerful as the full cartridge version, but I found it!
$7

Infocom 4 in 1 sampler. This is a demo disk from Infocom of Zork, and 3 other Infocom games. Not terribly useful but gives you an idea of the Infocom style games.
$5

An Evening of Horror
A text adventure with really nice digitized grafx, done by an 8bit programmer from Hamilton I beleive (It's 4 disks, both sides). I have the original docs somewhere around here.
$10

Original Sparta Dos version 1.1 (c) 1984.. this is the only DISK based version of SpartaDos that will run on the Atari 400/800 OS. Complete with docs. Also have the ICD Ultraspeed documentation
$7

Some games by Mastertronic
Ninja (Both Atari 8bit and C64 versions are on the same side! This was very cool, and I always wondered how they did that)
$5

Dispatch Rider (Xl/XE only)
$5

Crystal Raider (Xl/XE only)
$5

I know I have original docs (somewhere) for the above 3 games too.

Spanish by Advantage./Artworx. Includes the Atari disk, an audio tape and an Instruction manual. This is a very nice package, has a matador on the front bullfighting.
$5

PlatterMania by Epyx (on ROM), with original box and manual. Also includes a colour insert advertising memopry upgrades by Axlon. (Remember the 128k Axlon Ramdisk for the Atari 800??)
$5

Please send all offers (in US funds) in private e-mail. Prices are negotiable when more than 1 item is purchased.

Alan

Well,Sam. The 850 Interface Module connects between the computer
console and the peripherals. It has 4 serial ports and a parallel
printer port. It has a processor and memory, and the ports are
programmable. A modem usually connects to port 1. Instructions are
avail. on one of those FTPs, but it's in German. Takes a 24 VAC@150ma
xfmr. Lots more to it , but most early Atarians needed one of those
those to have any flexibility with the rs-232 devices and the
printers. I bought one in late 1980. Paid about $150, they're
about $25 now. Hope that helped some. James.

Oh, yeah. Forgot to comment on soft ware. It doesn't use any. When it
senses a printer connected to its' parallel port, it uses the P
handler of the Atari. And when it is turned on before the Atari, its'
microprocessor uses a bootstrapping operation to allow the Atari to
program the serial ports. I think that's right. James.On 27 Jun 1997

The best monitor to use with the Atari 8bit is the one for the AMIGA.
The picture is OUTSTANDING and unbelivable!!!!
The second best is the commie 1902a then the 1802 and 1702
Be warned: The AMIGA monitors have BAD flybacks and power packs,
I went threw 3 of them in one year... But it was still worth it!! :)

You probably will want to keep the original box, and instructions booklet. But if you are referring to shrinkwrap, personally I say take it off. As long as things are in Excellent condition, it should still retain its collector value. However, my guess would be that it is worth something less than $10. regards, Matthew

I use a Commodore 64 Monitor on my Atari 130XE that I think is better than any TV, that I borrowed from my old school, and I got a note saying I could have it until the school needs it.(wonder when that will be)

5222. Atari 800 A/V port specifications?

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-28 00:00:00 UTC
From: scalar@blues.jpj.net
Message-ID: <5p2sqm$qiv@news.monad.net>

I have received an old Atari 800, and I am wanting to improve the output video quality from this machine. The RF output is extremely weak, so that even with a 10dB antenna booster it's still 50% snow and static. Can someone tell me the pinout on the A/V jack?

A number of new items have been added including an 800, a 1050,
a digital device, a number of cartridges, a few tapes & disk packages.

Atari Items for Sale plus shipping

Atari 800 Computer (one missing key) w/power supply. $59 added 6/21/97
Atari 1050 disk drive and power supply..... $49 added 6/21/97
Ape Face Model XLP Digital Device..... $39 added 6/21/97
Atari 850 Interface no power supply..... $39
Atari XMM801 printer..... $24
Atari 1020 Printer..... $15
Atari XM301 Modem..... $15
Atari 410 Program Recorder (tape deck) (3)..... $14
Atari 400 Program Recorder (tape deck)..... $12
Double Atari Cable - two joysticks to one port etc.. $ 9
Cables for Atari etc from Chelco (6) ..... $ 8 each
Paddles (3 sets)..... $12 each
WICO Command Control Joysticks - rough..... $12 pair
DVE Printer Power Supply Model DV-2412A..... $10
50 5-1/4 diskettes $10
50 3-1/2 diskettes..... $12.50
.....

Diskette Software for Atari Computers $5.50 each (5 for $24)
Most have box & docs

Advanced Protection Techniques from Alpha Software (no box)
ALA Software - G-Men
ALA Software - Assasins Cove
Animation Station from Designlab (no box)
Atari Program Exchange - Alien Egg (no box)
Atari Program Exchange - Pre-School Games (no box)
Bond Analysis
Castle Wolfenstein (plastic envelope)
Con*Putation
Cranston Manor Adventure (no box)
Cross Fire from OnLine Systems (no Box)
DataPerfect (no box)
Dogfight
Dr Seuss - Fix-Up The Mix-Up Puzzler
Graphic Generator by DataSoft w/box & docs
Leader Board Golf Game (no box)
MatchBoxes

MegaFont II from XLEnt Software
Mission Asteroid from On-Line Systems (no box)
My First Alphebet (no box)
Page Designer from XLEnt Software
Reading Skills
Sands of Egypt from DataSoft
Sesame Street Astro-Glover (3-6)
Sesame Street Print Kit for Atari & Commodore
Spinnaker Alphabet Zoo (3-8)
Spinnaker Hey Diddle Diddle (3-10)
Spinnakers Kids on Keys (3-9)
Spinnaker Kindercomp (3-8)
Star Voyage Series - Star Voyage 1 & Star Voyage 2
The Big Math Attack
The Jar Game & Chaos
The Halley Project - A Mission in Our Solar System (no box)
Tinks Adventure (4-8)
Tonk in the Land of Buddy-Bots (4-8)
Tuk Goes to Town (4-8)
Upper Reaches of Apshai
Wizzard & The Princess (no box) Hi-Res Adventure #2
.....
Diskette Software for Atari Computers $8 each (4 for $28)
most have box and docs

Age of Adventure from Atlantic Arts
DeBug by Childware
Hard Hat Mack by Electronic Arts
Master Diskette 3 (no box)
Murder on The Zinderneuf
Software Protections Techniques from Alpha Systems (no box)
Spellakazam - The Magic Spelling Game (shrinkwrapped)
Spellicopter - The Action Spelling Game (shrinkwrapped)
Success with Math - Linear Equations -- added 6/21/97
Success with Math - Quadratic Equations -- added 6/21/97
The Seven Cities of Gold by Electronic Arts
Turtle Tracks - learn Programming
Word Flyer by Electronic Arts (2)

.....
Diskette Software for Atari Computers $3.50 each (4 for $12)
diskette only

Adventure 1.2.3 from Adventure International
Adventure 7.8.9 (2)
Analog Disk #57
Analog Disk #73 June 1989
Andromeda Conquest
Cardware High Tech Expressions
Caverns of Mars
Compute Disk October-December 1986

Compute Disk January-March 1987
Computer Crosswords for Atari or Commodore
DISKEY from Adventure International
Jingle Disk High Tech Expressions
PartyWare High Tech Expressions (2)
Printer Driver Construction Set from APX
Summer Games - added 6/21/97

Who?

You know,I wonder if he can actually SEE our posts.Has anyone actually mailed
him.

>The archive just IS. Why burn a CDR of it if its all over the net
>and takes less than 100 MB?

Aren't there places you can go that will burn CDs for you?
WORM drives are great if you're the one that owns it,but I hear that
those CDRs don't work too well in a normal CD drive.
(these were ATAPI (PC-only) drives.I assume that he'll be using the MSC ATAPI
interface.I've never heard of anyone using a BB or MIO to use SCSI CD drives)
I wonder if there's a CD-DOS for the MSC interface yet?
(or else you'll have to use a conversion programme)

Besides,100MB is a awful lot of floppy disks.
(and it's geting hard to find double density disks anymore)
I guess he could use a hard drive with that MSC.Or else buy a used PC and a
SIO2PC cable,though that is only mid-range in speed for (enhanced) floppy
drives,even if you're using a hard drive on the PC.And a Karin Maxi (PBI)
drive is MUCH faster. (11k a second)
The MSC route (CD or HD) would be the best.

Perhaps someone could start selling the Jellystone archive for the price of
making the CD,plus a SMALL handling fee.

>>game software made Nintendo the success it is today.

Actually,many of the Nintendo games that I rented were clear rip-offs of old games like Shinobi and Double Dragon.And the RPGs are simplistic.They're like text adventures.In "Dragon Warrior",when you enter combat with a monster,you just see a portrait of the monster and get a menu of attack,run,use item and Magic.You can't even move around.It's actually just like Alternate Reality. Compare to the Sega with it's "Shining Force" RPG.

Of course back on the Atari,there were the endless rip-offs of Galaga and Space Invaders and Pacman.But those were free.And those are different TYPES of games. I can't count the countless Double Dragon clonse on the Nintendo.
(is Double Dragon a rip-off of something)
And,of course,there are still games being made for the Atari.By people like Itay (made Ice-T and Tetris clone with 64 colours/lumnas interlace mode) from Israel.And our precious German,Polish and other European programmers making things like 160x200x30 monochrome possible.
(I'd like to see that on a 80's PC!)

>-----BEGIN PGP SIGNED MESSAGE-----
>Their obnoxious censorship made me give up on console games

"Console games"?
As opposed to what,board games???
(board=bored!)

>entirely. It always seemed to me that the so-called 'Seal Of
>Quality' meant some censorship alongside whatever other issues they
>may have had in mind, like playability or graphics. Most Nintendo
>games are so...Disney. I can see the fragging death in a N64
>version of Doom....not! There is a glut of crappy game software

Actually DOOM 64 is quite bloody.But the lack of multi-player options make it rather useless.Perhaps the 64DD will change that.
(thus I prefer the Genesis' "Battle Frenzy" to DOOM 64)

>for Macs and PCs. Does this make people reluctant to play games on
>PCs? Not really.

Well remember that people buy the PC and then just soak up all that FREE
software!

>The 7800 was the last console Atari had. A glut of "crappy third

uh,wasn't the Jaguar and/or the TT the last console?

>party software?" did not kill it. Other than the fact that the

>system that cartridges had to conform to or they would not work. I
>have no doubt that any prospective third party developer had to pay
>BIG bucks to be let in on the secret.

They probably had to send their game to Atari to have the secret code made up,
rather than Atari telling them how to create it.

>The point is, it is ESSENTIAL that PCs and game consoles have open
>designs to be a success. Who came out with the most cool software
>for the 2600? Without a doubt, Activision and Imagic consistently

>closed there probably wouldn't have been an Imagic or even an
>Activision for all that it was made up of ex-Atari programmers.
>Atari COULD have stopped them legally.

They should've made the 7800 a full computer rather than a dedicated game
system.Then there would be free software to keep it alive.

>It was the early closure of the Mac that is making so much trouble
>for it today. It was the open PC with it's glut of "crappy" add-on
>cards and software that is the clear winner in the marketplace

And that makes it so damn crappy for serious work on the PC.
No support for memory over a megabyte,no real interupt support,no graphics
support.

>(Please spare me long florid descriptions of how good the Mac is,
>it isn't the point.). Closed systems are LOSERS.

The MAC is like the Apple,really for school and not for gaming.The PC is only
cabable of games because they made those incredibly fast CPUs for it.
Apple tried to do the same with their 4mhz Apple 2c and 2ee.
And the Mac has no text mode,making text-intensive games and term programmes
impossible.It's impossible on really fast Macs because it's impossible to buy
them!
(you'll notice that many early PC games used text mode to get around the meager
capabilities of the (SLOW!) graphics mode.And the CGA text mode is slow as
well)

Oh,that's too bad that you can't do that.

But seriously,of course you can use 256-byte sectors,that's what they all do!
It's the BB's 512-sector capability that makes it special.Some SCSI drives
won't let you use 256-byte sectors.

"parallel bus printer"????

>Can't comment too much on the others ATR8000, IDE interface (yes
>there is one!) or the MIO.

I remember reading that the ATR8000 was slow.

There are actually two.There's Konrad's and there's a "MSC IDE" interface.
The MSC allows you to have 200+ partitions and use CD drives.
I don't think that the MSC does DMA,and I KNOW that Konrad's doesn't.
So don't expect 300k a second or anything.
(that's what my PC hard drive got)

It doesn't do any emulation. (except ST) And it's not even 80-columns!!!
Get Ice-T for VT100 emulation MUCH better than anything you'll find on a PC.
You'll want the enhanced Black Box so that you'll have auto-flow control.
(doesn't do XON/XOFF,though)

>The highest Bobterm version I ever used was 1.22.. not sure if
>anything newer came out.

I thought that the highest version was 1.20.I know that a 1.21 came out,but it
was just 1.20 with a XEP-80 handler.What's 1.22?

>i heard a Zmodem file protocol patch was released for it? Anybody
>comment on that?

There's a stand-alone programme called Atar-Zee-Modem,but it times-out on a
2400 connection if you're connected to a buffered-modem equiped BBS.
(it takes too long for the buffer to empty out)

It's hard to believe that there are people who don't know what a ARC file is!

ARC files contain other files.You'll need to use a ARC programme to get them
out.And then you'll need to put those files in a ATR file.
I'd just download Super UnARC,and use PC Xformer to read both SUPUNARC and the
ARC file in.Then just use SUPUNARC to unARC the files onto a ATR disk image.
Of course you'll have to create that first.I'd use APE to create 128-sector
images.APE has a problem creating 256-byte per sector images.

>found a killer site, but all the files are in .exe form... they
>won't run with xformer.. do I have to transfer them to a different
>kind of file? What are the legalities around archiving all this
>old stuff? can I create my own files and transfer them without
>fear of recompense?

As I've said countless times before,there's no such things as a EXE file on the
Atari.They're either PC files or Atari COM (OBJ) files.Just put them in a
image and run them.

>Does anyone know a good site with .atr files? or .xfd files? And
>lastly, I can't seen to get on the server with XL-IT (which I hear
>is the best) and I can't find it anywhere... if anyone could e-mail
>me xl-it version .20 I would appreciate it...

XL-IT is too slow to be useful.Even that pause when you press RESET on a 800XL
is un-bearable on XL-IT.
You should really just buy a Atari and SIO2PC cable (like a 850 interface) if
you want to play games.Atar's graphic capabilities are MUCH more complex than
the PC's.It's simply impossible to emulate anything but the basic features.
(P/M graphics,DLIs,smooth scrolling...)
You can forget playing things like the 64-colour (and,yes,lumnas) Tetris clone
by Itay Chamiel from Israel.

>Everyone has been real nice about helping me and I really appreciate
>it... I guess the usenet is good for somehting other than collecting
>dirty pictures... :)

At least you don't have to pay like you do with HTTP sites.

Error 164's are not indicative of bad sectors.So there's no reason to try to copy "all the good sectors" unless you have had other errors relating to bad sectors.Error 164 means that the intra-sector links point to a sector that isn't part of the file.
(a ISL is like a 2-byte FAT in each data sector,point to the next sector)

>The last three bytes of the sector tell you what's next. You have
>the file number, next sector number, and how many bytes in that
>sector. In most cases, the next sector number was modified, or the

Or just do a directory to see the file sizes.
(physical,not logical)

>Finally, once you get the file back, copy every good file on that
>backup disk to a blank disk. Keep going til you can't get any more
>files back, if there's more than one. That blank disk that now has
>the recovered files, use it as the original disk.

Or just run DISKFIX,which deletes the corupt files and fixes the VTOC.
(VTOC=map of free sectors)
DISKFIX comes with DOS 2.5.

>Jeez... I can't believe I remembered all that... Also remember that
>sector 360 is the VTOC, and 361-366 or 367 are the file tables, the
>directory sectors. There was a way to change a file so it won't

361-368=8 directory sectors=64 files.

>show up, but rather, it's there, taking up space. If I'm
>remembering right, the normal flag was 42, and changing it to 43
>would make it a hidden file.

You're talkingg about a file that was opened but never closed.
Disk fixer programmes will probably delete those "hidden" files.

>A former college roomie and now old friend sometimes regale each
>other with the constant pranks we played on this guy who constantly

>bothered us. We were hiding his files all the time, and he never
>figured it out, even after an entire year of us doing it to him. We
>even went so far as to give him the software we used, and he
>*STILL* didn't figure it out.

I sent a friend of mine a WAD file for DOOM.Since I got it off a CD the
read-only attribute was on.So when he used DCC (DOOM Control Centre),
it simply aborted with run-time error 5.This abortion seemed to be a automatic
feature of his compiler,rather than the programmer actually checking for errors.
DCC can be used to re-assign the level numbers of a WAD,so WAD files are opened
in UPDATE (mode 12 on Ataris) mode.Of course this caused a automatic-runtime
exit.Aparently the programmer never thought that anyone would have
write-protected files and hence that he should re-open the file in read
(mode 4) mode.Needless to say that my friend is simply to lazy (he's a STer) to
type command lines and simply went to delete the file,which of course refused
to be deleted.Of course he beged me for help.I should've feigned ignorance.

(strange,the ST has the same attributes as the PC,so you'd think he'd know
better.Then again,he never did change the PATH varrible on his ST from the
default of "A:\".Aparently the Tramiel Atari corp. didn't think that you'd
ever have anything but floppy drives)

(error #5=ACCESS DENIED.don't you just love those vague MS-DOS errors.Error#5
is used for about a dozen different errors.Basicly whenever your're not able
to do something because of the file system,rather than a bad sector.
My favourite is when you try to delete a directory,and you can't,it says
"Invalid path,not directory,or directory not empty".What,do I get to choose
which one it is? <sneer>)

> Be warned: The AMIGA monitors have BAD flybacks and power packs,
> I went threw 3 of them in one year... But it was still worth it!! :)

The sad thing is, most, if not all of those amiga monitors could have probably been easily repaired. The problem with the flybacks on the Magnavox manufactured 1084's is not the flyback itself, but cold solder joints that crack and lead to bad and/or arcing connections. Resoldering or reflowing with a hi-wattage iron usually cures the problem. (The problem occurs due to the flyback acting as a massive heat sink during the flow soldering of the PCB at the factory, as I understand it).

Version 1.21 was much more of an improvement than just adding an XEP-80
handler. Version 1.22 changes (I believe) one byte to get around a
problems some users were having. Version 1.22 was never a full release;
just the .com file was released.

There's also a 1.23 that's specific to PC XFormer.

Guy1015@aol.com wrote:

The Amiga has a problem with bad flybacks threw 3 of them out in one year.

Excellent point. I was told that 1084 made after April 1992 did not have
that problem. There is a company that adverstises in Amiga magazines that
sells a board that fixes the flyback problem. If anybody is interested
E-mail me and Ill look it up for you.
I havent had a problem with my 1084 yet, but I don't use it every day.
Actually that's not true. I had to replace the power supply-$60. But
other than that, OK. And the picture does kick butt. Especially with the
new demos- Like Asskicker and Recycvle and Bobs land, all the ones from
Ornetta 96. With the Asskicker demo on the Amiga monitor, it felt almost
like seeing Doom on the 8 bit!!

ONLY AVAILABLE IN THE:
U.S.A, VIRGIN ISLANDS, AND PUERTO RICO CANADA*

BE SURE TO GO TO OUR SITE AND CHECK OUT OUR FREE TRIAL.

Call everyone and tell them to throw away all of your old home, office, fax,
pager, voice-mail, and cellular numbers and give them your New "Virtual Office"
800/888 number! The only number any one will ever need.

Are you tired of giving out all of your different phone numbers to everyone?
Wouldn't it be nice to be able to give everyone just ONE phone number that
will find you anywhere you are? Even out of town, or in a restaurant, or even
on the golf course.

Now you can.

We have the answer to all your communication needs. It's called the "Virtual Office".

And this new service is loaded. It comes with features like:

An automated Call Attendant, Live Call Connect (in real time), Fax Sending, Fax Receiving,
Even without a fax machine! E-Mail Notification and Delivery, Without a PC!,
Outbound calling, Low Cost Long Distance Service, Inbound/Outbound 800/888
Number, Worldwide Call Transfer, Call Forwarding, Call Screening, Full Service Voice
Mail, Nation Wide Pager Notification, Conference Calling, Speed Dialing, Auto Dial,
Auto Messaging, Temporary Greeting, Unavailable Greeting, Password Protection,
Pager Notification, and No Equipment or Software to buy, "Ever".

Priced from $9.95* per month, Plus 10.9 cents per minute per event.

That's less than one phone line would cost per month.

For more information please visit our web site:
http://www.mynumber.com

* Based on our best priced plan.
* Canada has a higher per minute rate.

: isn't part of the file.
: (a ISL is like a 2-byte FAT in each data sector,point to the next sector)

I know. That's why I was easily able to copy the disk with the errors, and use the backup of that disk easily. How many times do you think I faced this? I actually 'lost' an entire file that I downloaded, only to get it back by going through the *ENTIRE* disk and redoing certain sectors. I had the disk back within an hour and a half.

You should have seen my roommate. Totally blew his mind.

: Or just do a directory to see the file sizes.
: (physical,not logical)

Righto. Two various ways to do it.

: Or just run DISKFIX,which deletes the corupt files and fixes the VTOC.
: (VTOC=map of free sectors)
: DISKFIX comes with DOS 2.5.

It's been awhile, but I didn't want to run it. I wanted to do the job myself. I didn't mind.

: 361-368=8 directory sectors=64 files.

Thanks for the reminder! I couldn't remember what that final sector was.

: You're talkingg about a file that was opened but never closed.
: Disk fixer programmes will probably delete those "hidden" files.

Not quite. Well, it could be... However, using DOS 2.5 on a 1050 would give you enhanced density, which was density and a half. You could fill up that entire disk, and see everything. However, when you used a different DOS, like MyDOS, Sparta, etc., it wouldn't show them, unless you changed that flag to a normal flag that the other files had. I was able to get some files I needed when I didn't want to have to use 2.5, and was going from single to double density.

: (strange,the ST has the same attributes as the PC,so you'd think he'd know
: better.Then again,he never did change the PATH varrible on his ST from the
: default of "A:\".Aparently the Tramiel Atari corp. didn't think that you'd
: ever have anything but floppy drives)

hehe... You'll get them from time to time. They should have thought of
STers who wanted to have hard drives, but they never put that in the
design plans. Too late now, unless JTS or someone else is going to come
out with something like that, unlike the Falcon, which has an internal IDE
connection, which is nice.

: My favourite is when you try to delete a directory,and you can't,it says
: "Invalid path,not directory,or directory not empty".What,do I get to choose
: which one it is? <sneer>)

This thing drove me nuts while using Unix. Before I found out, I was going
directory by directory, doing an rm * in that directory, then rmdir that
directory. After a short time, I figured it out...

rm -rf directoryname

Poof. Directory's gone.

Howdy,

I am trying to organize all of my binary load files on to alphabatized floppy disks and know there is a little shareware/freeware utility called either Quickmenu or LeMenu. This file writes a boot sector which give a directory of all files on disk, you then pick a number and the file runs.

If you have it and would be willing to send me the file or if it is available on an FTP site I would be most grateful!

Thanks
-Marlin

5249. WTB: Jewels of Darkness game by Level 9 computing

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-29 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <T2ZNCCC@tos.pl.net>
Source record: 71984

A member of our local Atari/TOS computer user group is looking for the game "Jewels of Darkness" by Level 9 Computing for his Atari 8 bit machine.

If anyone has this game for sale or can point me in the right direction, please get back to me.

I would appreciate a reply by email, since I do not regularly read the comp.sys.atari.8bit newsgroup.

Any help would be much appreciated.

Personally, I would suggest a big TV with RCA composite video in. The reason being that some software takes advantage of the fact that in 320X200 all of the odd numbered pixels are red and all of the even numbered pixels are green or vica versa, I can't remember. (because a TV has less than 320 pixels across!) The Amiga monitor would show them all as the same color (say white). The program that I am thinking of in particular is Pinball Construction Set, which on Atari emulation is black and white. On a TV it was red, green, and white.

It works like this:
10 - red (ish)
01 - green (ish)
11 - Foreground
00 - Background

From: areeve@avana.net
Message-ID: <33b6d0d9.714254@news.avana.net>
Source record: 71987

I'd like to see my MIO and will sell it to the highest bid received by July 5th (prepaid check/money order, buyer pays shipping cost in addition to bid). It's the 1 Meg variety and includes original documentation as well as the adapter card that allows the unit to be connected to an XE expansion port [in addition to the expansion port on an XL)]and have 2 cartridges plugged into it (so you could have an RTime cart plugged into one slot at all times). Email any offers to me at areeve@avana.net.
- Thanks, Alan

We can even include few binaries.

5257. Help identify these Atari S-100 Boards

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-30 00:00:00 UTC
From: dastar@crl.com
Message-ID: <5p6v42$f5h$1@nnrp1.crl.com>
Source record: 71992
Cross-posted to: comp.sys.atari.8bit,alt.atari.2600

I just discovered some *VERY* interesting S100 boards that I didn't
realize I had in my box 'o S-100 boards. They seem to be some kind of
Atari development/prototyping system. The boards are:

65xx Emulator, part no. 100-015-2, Rev. 2, (c) 1983 Atari
[this is the PCB only]

Trace Memory Interface, part no. 100-002-2 (two of these)
has (3) Intersil 6402 chips and (3) 26-pin connectors (for interface to a
terminal), DIP switches to select the baud rate for the 6402 chips (up to
38400 bps). Also has a 40-pin (2-rows of 20) ribbon cable connector
labelled J100. One has a test sticker on it with "OK 10/25/82" written
on it.

6502 Processor, part no. 100-003-2, Rev. 4
has a 6502 and some other stuff, such as a clock speed DIP switch
(1, 2, 4 MHZ settings), some RAM, a 40-pin ribbon cable connector
which presumably connects to the Trace Memory Interface card (labelled
COMP BUS J100).
I have 2 of these boards but one is incomplete (does not have all the
chips the other one does, for instance the 6502).

All have the Atari name and logo in yellow lettering.

Any idea what this stuff is and what it was used for?

If you can shed any light, please reply to dastar@crl.com. Thanks!

Well for one: does anyone have a copy of MULE that will run correctly on ANY atari 8-bit emulator with sound?? And two: when you catch the wumpus that the game does not lock up?? I can run MULE on pokey just fine but with no sound.. and when I catch the wumpus the game locks up...XL-it! Gets me into the options screen on MULE but when I start the game and it asks all players to hit a button on a joystick or paddle....it acts like a paddle button is pushed in all the time and the game says it needs at least one joystick to play the game. But the sound is great atleast on XL-it!

Sony makes nice monitors for video applications that are used by TV stations and such. Pick up a copy of Shutterbug or one of the "home video" magazines and call the companies that sell pro video hardware. Personally, I think you'd probably be just as well off or better using a TV with S-video inputs.

The program QuickEd is a character font editor using the touchtablet or
a
ST mouse (or a joystick). It's available from PPP in Germany.

> 3) I'd like to try writing some software of my OWN to read the
> Touchpad. Before I try to figure it out on my own time, does
> anyone here perhaps ALREADY KNOW "how to read the Touchpad?"

There exists a programming language called QUICK (available from PPP),
which is something like C and BASIC mixed, and one of their libraries is
for using the touch tablet very easily.

I have released the HyperSpeed modem accelerator as freeware. You can get it at http://members.aol.com/lenspencer/hyperspd.htm

Enjoy.

>program the serial ports. I think that's right.

That may or may NOT be strictly correct; it seems to depend on how you
want to look at it...

The 850 will (attempt to) carry out commands directed to device "P:" by
the Atari. The Atari OS ROM contains a built-in "P: device handler" which
produces those commands. You can therefore print to the 850's parallel
port without any special software.

The 850 will also (attempt to) carry out commands directed to device "R:",
or to devices "R1:" through "R4:" -- i.e. any specific serial port of the
four available. However, the Atari OS ROM does _not_ contain a built-in
"R: device handler," and so CANNOT ISSUE "R:" device commands without
additional software. The necessary software appears to reside within the
850, from which it must be "downloaded" into the Atari proper. The
process of downloading occurs in two phases and is initiated, again, NOT
by any built-in part of the Atari OS, but typically by software loaded
from DISK. (In the original DOS 2.0 environment, in my experience anyway,
there was a small AUTORUN.SYS file of 6 sectors which contained a short
program to initiate the 850 "R: handler download.")

It is, of course, POSSIBLE for the download-initiating-command-issuing
program to reside on some OTHER device than DISK: it could be
loaded from Cassette tape, burned into a plug-in cartridge, or
POKEd into RAM "by hand" using a simple BASIC program. It might
even be the case that the ENTIRE "R:" DEVICE HANDLER could come
from "somewhere else," other than the 850 itself via the standard
download mechanism -- but it's POSSIBLE that the 850 itself might
refuse to operate until AFTER the download has been requested, on
the theory that "I never sent out the handler, therefore those R:
device requests CAN'T be for ME." :-)

BTW, the original requester asked about an "Atari 810" and then went on to
describe what we've clearly recognized as an "Atari 850." Just for the
record, original poster (whomever you are), there _is_ an "Atari 810" --
it's the first model of Atari disk drive.

Hope this info has been of help, or at least interest!

Just wanted to thank those who've written back to me, so far, about the Atari Touchpad et al. Turns out you can read the Touchpad as though it were a pair of Paddle Controllers -- I would NEVER have thought of that! (Paddle 0 = X, Paddle 1 = Y; value of 228 = stylus is lifted, NOT on tablet.) Better yet, I can certainly handle PROGRAMMING something like that! :-)

Unfortunately I haven't heard from anybody yet who has a Touchpad they want to SELL! ... Anybody?

Chris

I didn't find an answer for this in the Atari 8-bit FAQ...

Is the software for the Atari 8-bit computers "tv-standard dependent"
(this means that different versions of the same program, NTSC and PAL,
must be written) - like it happens the Atari 2600 game console?

P.

Sam,

Looks like you found some boards used in the old 2600 in-house
development systems. These units were Cromemco S-100 based computers
with the appropriate Atari S-100 cards installed. This system in turn
was connected to a PDP-11.

Of course they could also be coin-op development tools, hard to tell
without looking at them.

I had the same problem with MULE and XL-it! until Markus improved the
joystick calibration in XL-it! 0.20. Now I can play the game with
great sound, but the screen priorities aren't right yet, so you never
get any clue to where the wumpus is. :-(

If you want to try it and a re-calibration doesn't help, try these
values in the JOY.CFG file (correct for my joystick):

114 510 115 525

I am moving to Florida in about two weeks, and need to sell everything I have got.

I have most Atari Items in box, and working unless otherwise stated.

130 XE
810 (no box)
130XE 576k, and 4 programs built in (two of which were written by David Young)
800 (no box might be modified)
Microsoft basic 2
Microcomputer Games (avalon Hill)
Synfile+
Sargon 3
Invitation to Programming 3
Assembler Editor
Great American Road Race
Visicalc
Broad Sides
Sparta Dos Construction Set
Flight Simulator 2
Touch Down Football
Music Construction set
Banner Catch
Books
Paper Clip
850 Interface
Super Archiver (works when it wants, may need transfered to another drive)
RGB Monitor (commodore)
LIght Gun with Bug Hunt (no box)
1010 TAPE DRIVE (NO BOX)
Learning German
(carts no box:)
Pole Postion
Super Breakout
Frogger
Donkey Kong
Robotron 2084
Joust
Ms. Pac Man
and tons upon tons of disks full of games, and utilities!

Apple 2e with two disk 5 1/4 disk drives, monitor, and little software.
TRS 80 few carts, and tapes
Color Apple Monitor (no sound plug)

Aquarius Computer

Apple 2gs with monitor 3 1/2 disk drive, 5 1/4 disk drive, Power Center, Computer Fan.
(computer needs repaired. Cost will run to around $40 or $60. I have adress for computer
repairs).

Tons of Amiga Games, and utilities (most with box).

I beleive this is a complete list...

Please E-mail me if there is any interest, do not reply to UseNet!!!
I would like to sell everything together, but if the offers are good I may sell a few items
independantly.

Thanks a lot!

5281. Where is the 8bit heading?

Newsgroup: comp.sys.atari.8bit
Date: 1997-06-30 00:00:00 UTC
From: bchermma@bluffton.edu
Message-ID: <867703538.24642@dejanews.com>
Source record: 72016

I have been using the Atari 8-Bit for about 2 years now,
and have been very pleased with the machine by Jay Miner,
infact I find it almost as much fun as his AMIGA.
The one thing I noticed though is that no one really seems
to be into hacking this little machine as much anymore. Yes,
it is true that I hear rumors of cool soft and hardware being
developed over in Europe live rabbits in heat, but I never see
it...

Anyhow I would just like to know what is being done in America, or else
where in America can I get a hold of these European hacks. I have heard of
Cd-Roms, Spart-Dos debugging, Giga drives, intense games, Graphic OS,
ect.ect.ect

Has anyone ever thought of writing a Graphic Internet interface? I know
the Atari can go on-line but you have to use a text only BBS sort of
Program to acess it (bummer).

Anyhow please E-mail me directly since I do not get to check the Use Net
to frequently...
Thanks!

Dee-Lusion

Hello gamers,

I just wanted to announce the Internet presence of Tarantula Games. We are the makers of TECH BULLIES(c) a "mecha" style combat game.

" The growing appeal for a
mecha combat game with a
different feel and flavor
from what the public was
accustomed to led to the
concept of Tech Bullies. "

If you are the least bit interested, stop by our web page for full details. While there, sign up for Tarantula Times, our FREE newsletter. We also have a free chat area and links to many quality internet sites.

Best regards,

Dan R. White
